**Recoup lost time and revenue with denials management and
appeals know-how. Claim denials can sink a profit margin.
And given the cost of appeals, roughly $118 per claim, not all**

denials can be reworked. A practice submitting 50 claims a day at an average reimbursement rate of $200 per claim should bring in $10,000 in daily revenue. But if 10% of those claims are denied, and the practice can only appeal one, they lose $800 per day—upwards of $200K annually. Your medical claims are the lifeblood of operations. Don't compromise your financial health. Learn how to preempt denials with the Denials Management & Appeals Reference Guide. This vital resource will equip you to get ahead of payers by simplifying the leading causes of denials and showing you how to address insufficient documentation, failing to establish medical necessity, coding and billing errors, coverage stipulations, and untimely filing. Rely on AAPC to walk you through the appeal

What's more, you'll learn when a claim can be "reopened" to fix a problem. Medical Coding Certification Exam Preparation is the resource
your students need to prepare for the CPC and other coding

certification exams. It provides a comprehensive review of topics students need to know for these exams, including coverage of anatomy, medical terminology, pathophysiology, as well as concepts, guidelines, and rules of medical coding. Authors Cynthia Stewart and Cynthia Ward bring a fresh approach to exam prep based on their teaching experience and helping students prepare for certification exams. They provide the necessary tools to understand how to break each case down and translate services, procedures, and diagnoses into the most appropriate codes for reimbursement.

Medical coding professionals provide a key step in the medical billing process. Every time a patient receives professional health care in a physician's office, hospital outpatient facility or ambulatory surgical center (ASC), the provider must document

the services provided. The medical coder will abstract the information from the documentation, assign the appropriate codes, and create a claim to be paid, whether by a commercial payer, the patient, or CMS. While the medical coder and medical biller may be the same person or may work closely together to make sure all invoices are paid properly, the medical coder is primarily responsible for abstracting and assigning the appropriate coding on the claims. In order to accomplish this, the coder checks a variety of sources within the patient's medical record, (i.e. the transcription of the doctor's notes, ordered laboratory tests, requested imaging studies and other sources) to verify the work that was done. Then the coder must assign CPT codes, ICD-9 codes and HCPCS codes to both report the procedures that were performed and to provide the

medical biller with the information necessary to process a claim for reimbursement by the appropriate insurance agency. This text is intended to dispel any ambiguity prior to taking your national certification. This text contains over 4OO preparatory examination questions, covering ICD-9, ICD-1O, Revenue cycle, Medical report extrapolation assignments, HCPCS, UBO4, and CPT.

An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full

of wisdom…bound to change your thinking about parenting and its conventions" (Amy Chua, author of Battle Hymn of the Tiger Mother). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a

family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

Medical Office Billing
An Applied Learning Approach

Every known illness, disease and condition has a
specific number that goes along with the word

describing the person's medical problem. Every physician and their office staff must know medical codes for the sake of billing purposes. If the doctor and office staff does not code a specific illness, condition or disease correctly the insurance company may not pay for treatment, medication, in hospital stays, outpatient treatment, and a number of surgical and other procedures performed for the patient, making it impossible for the patient to receive the proper treatment. Common illnesses, diseases and conditions listed in a pamphlet would enable the medical student to become familiar and

able to memorize with the more common medical codes. The bottom line for using proper ICD codes is money reimbursement for the medical community and patient.

"This workbook explains the fundamentals of how to work effectively as a medical office insurance staff member. It introduces individuals to the various steps of filing a claim and the role that insurance staff members play in claims processing and thus in the organization's financial health"--Provided by publisher.

The CPC exam is comprised of 150 multiple-choice

questions. The test takes five hours and 40 minutes to complete, making it fairly rigorous. There are two breaks in the middle of the test. The CPC exam costs $300 to take, but only $260 if the test-taker is a member of the AAPC (annual dues are $125 for individuals and $70 for students).The CPC exam thoroughly tests a coder's grasp of the entire coding process, from medical terminology to code sets and beyond. Per the AAPC's website, the CPC exam covers 24 subject areas, including anesthesia, radiology, and medicine.You should recognize a number of these (like Evaluation and Management,

or Radiology) as sections of the CPT code manual. Others, like Anatomy and Physiology, are parts of the coder's everyday skill set.You should note that the questions on the exam are not divided or identified by the topic they are related to. That is, questions on the CPC exam will test you on all of the above 24 fields of medical coding, but they won't outright say, "This is an anesthesia question." Instead they'll just ask you about anesthesia, or surgery, or human anatomy.During the test, you'll be presented with a number of tests cases pertaining to the practice of coding. These test case questions will

present you with a condensed medical report and ask you to select the correct set of codes from the answers below.For instance, a test case question might read:"Sarah, a 45-year-old patient, visits the doctor and presents symptoms including a sore throat, swollen lymph nodes, and a fever. After performing a rapid strep test, the doctor confirms a diagnosis of streptococcal sore throat. The doctor prescribes an Amoxicillin as an antibiotic. Which of the following are the correct codes for this diagnosis, procedure and prescription?"There are also general knowledge questions, like "Which types of joints are

synovial?" that don't have an attached test case. That question's related to the musculoskeletal system, but the test won't come right out and say so. You'll have to rely on your knowledge of code sets, medical terminology, best practices, and the coding process in general to pass.Individuals who earn a score of 70 percent or better (105 correct questions) will pass the CPC exam. If you fail your first test, you are allowed one free retake.GETTING CERTIFIEDOnce you pass the CPC exam, you are not officially certified by the AAPC until you fulfill a few other criteria. In order to complete a CPC

certification, you must become a member of the AAPC. Certification is also limited to coders with two years of professional experience or those willing to complete an apprentice program.As such, the CPC exam is recommended for individuals who have already started their coding career. That won't prevent us from going over the basics of this important exam.

150 question CPC practice exam designed to mirror the actual AAPC CPC exam. This practice exam and study guide has the same basic structure and category divisions with questions very similar to

those found on the real exam. The answer to each question also includes a detailed rationale. Updated for 2021 Will definitely help you pass the CPC exam issued by the AAPC, and is also helpful if you are taking the CCS exam by AHIMA. Don't let your dream of becoming a Certified Professional Coder pass you by!
