The history of testing mental abilities has seen the dominance of two contrasting approaches, psychometrics and neuropsychology. These two traditions have different theories and methodologies, but overlap considerably in the tests they use. Historically, psychometrics has emphasized the primacy of a general factor, while neuropsychology has emphasized specific abilities that are dissociable. This issue about the nature of human mental abilities is important for many practical concerns. Questions such as gender, ethnic, and age-related differences in mental abilities are relatively easy to address if they are due to a single dominant trait. Presumably such a trait can be measured with any collection of complex cognitive tests. If there are many specific mental abilities, these would be much harder to measure and associated social issues would be more difficult to resolve. The relative importance of general and specific abilities also has implications for educational practices. This book includes the diverse opinions of experts from several fields including psychometrics, neuropsychology, speech language and hearing, and applied psychology.

This book covers the assessment of people within the workplace. Written in jargon free language, it offers a guide to psychological assessment that can be used by managers in their everyday work. Each chapter will specifically cover an assessment practice and then explore the issues surrounding it, following this discussion with a case study. Ideas for test selection, guidance on assessment centre practice and illustrations of successfully worked exercises are also included.

This is a fully updated edition of Personnel Selection, a seminal text on the psychometric approach to personnel selection by a noted expert in the field. Focuses on cutting-edge topics including the influence of social networking sites, adverse impact, age differences and stereotypes, distribution of work performance, and the problems of selecting new employees using research based on incumbent employees. Questions established beliefs in the field, especially issues that have been characterized as "not a problem," such as differential validity, over-reliance on self-report, and "faking good"

Contains expanded discussion of research and practice in the US and internationally, while maintaining the definitive coverage of UK and European selection approaches. Provides comprehensive yet accessible information for professionals and students, as well as helpful pedagogical tools (technical and statistical boxes, simplified figures and tables, research agenda boxes, key point summaries, and key references)
