Four major Soviet agents – Yuri Nosenko, the dissident KGB agent who disclosed the bugs in the American embassy in Moscow and claimed the KGB had no connection to the assassination of President Kennedy; Oleg Penkovsky, one of the West's most important agents who was eventually executed by the Soviets; and Pyotr Popov and Mikhail – are examined in depth, and the cases of six others are discussed. The stories of each reveal a great deal about the realities of the intelligence craft."

Originally published by Harper and Row in 1980, this clear-sighted volume blends historical events and autobiographical material in an attempt to explain how one individual American's search for a peaceful world led from the battlefield to the presidency of the United World Federalists, and finally to twenty-six years of active duty with the Central Intelligence Agency.

A scientist with a revolutionary cure for AIDS is incarcerated without explanation. Valuable artifacts are mysteriously misplaced by a prominent archaeological institution. Three celebrated astronauts perish in a suspicious fire after voicing their criticism of the US space program. Yet our world's most powerful agencies hastily dispel these alarming reports as conspiracy theories, and bury them in padlocked archives. The fact is that a suppression syndrome exists in our society. Suppressed Inventions and Other Discoveries exposes the startling degree of truth behind the rumors. Jonathan Eisen has collected over forty intriguing stories of scientific cover-ups and programs of misinformation concocted to conceal some of the most phenomenal innovations in mankind's history. These no-holds-barred accounts force us to confront the naiveté—and danger—of trusting our academic and political leaders to act always for the common good. Suppressed Inventions and Other Discoveries presents documented evidence that corporate self-interest, scientific arrogance, and political savvy have contrived to keep us in the dark about technological breakthroughs or interplanetary contact that may shift the current balance of power. Prepare yourself for a revealing look at the research and development to which we've been denied access. Suppressed Inventions and Other Discoveries begins by examining the ties that bind the medical establishment to powerful pharmaceutical corporations. Then it details the struggle of the independent research against Orthodox Science and its code of conduct, the Scientific Method. Next, the book investigates the cover-up of information concerning UFOs and extraterrestrial life that's certain to make you reconsider what you thought was science fiction. The final section discusses just a few of the numerous alternate energy resources and fuel savers that, if put on the market today, would soon run the fossil fuel monopolies out of business.

A historical perspective for current debates in Congress and beyond concerning the CIA's recent failures and ultimate fate is offered in this account of relations between America's spymasters and Capitol Hill.

The Secret History of the CIA

The clock is relentlessly ticking! Our world teeters on a knife-edge between a peaceful and prosperous future for all, and a dark winter of death and destruction that threatens to smother the light of civilization. Within 30 years, in the 2030 decade, six powerful 'drivers' will converge with unprecedented force in a statistical spike that could tear humanity apart and plunge the world into a new Dark Age. Depleted fuel supplies, massive population growth, poverty, global climate change, famine, growing water shortages and international lawlessness are on a crash course with potentially catastrophic consequences. In the face of both doomsaying and denial over the state of our world, Colin Mason cuts through the rhetoric and reams of conflicting data to muster the evidence to illustrate a broad picture of the world as it is, and our possible futures. Ultimately his message is clear; we must act decisively, collectively and immediately to alter the trajectory of humanity away from catastrophe. Offering over 100 priorities for immediate action, The 2030 Spike serves as a guidebook for humanity through the treacherous minefields and wastelands ahead to a bright, peaceful and prosperous future in which all humans have the opportunity to thrive and build a better civilization. This book is powerful and essential reading for all people concerned with the future of humanity and planet earth.

A senior officer in the Central Intelligence Agency for twenty-five years presents revelations concerning the successful and unsuccessful secret operations in which he was involved and offer logical, specific arguments for future changes in the organization's policies.

Formerly a staff archivist for the National Archives and a senior intelligence analyst with the Central Intelligence Agency, Rudgers challenges the popular view that the Agency was principally the brainchild of former OSS chief William J. Donovan. Rather, he explains, the centralization of intelligence was part of a larger reorganization of the US government during the transition from World War II to the Cold War. He also documents how it swerved from its original purpose of guarding against sneak attacks to taking part in clandestine activity against the Soviet Union. This history of US-led international drug control provides new perspectives on the economic, ideological, and political foundations of a Cold War American empire. US officials assumed the helm of international drug control after World War II at a moment of unprecedented geopolitical influence embodied in the growing economic clout of its pharmaceutical industry. We

Sell Drugs is a study grounded in the transnational geography and political economy of the coca-leaf and coca-derived commodities market stretching from Peru and Bolivia into the United States. More than a narrow biography of one famous plant and its equally famous derivative products—Coca-Cola and cocaine—this book situates these commodities within the larger landscape of drug production and consumption. Examining efforts to control the circuits through which coca traveled, Suzanna Reiss provides a geographic and legal basis for considering the historical construction of designations of legality and illegality. The book also argues that the legal status of any given drug is largely premised on who grew, manufactured, distributed, and consumed it and not on the qualities of the drug itself. Drug control is a powerful tool for ordering international trade, national economies, and society's habits and daily lives. In a historical landscape animated by struggles over political economy, national autonomy, hegemony, and racial equality, We Sell Drugs insists on the socio-historical underpinnings of designations of legality to explore how drug control became a major weapon in asserting control of domestic and international affairs.

The author presents startling discoveries that indicate that the American public has been seriously misinformed about the Watergate Scandal and reveals the actual culprits, sexual scandals, and malicious interagency spying

"The CIA: a forgotten history tells the remarkable story of the CIA interventions in more than fifty countries, from the earliest actions in China to the present day campaign against Nicaragua. Investigative writer William Blum describes the grim role played by the Agency in overthrowing governments, preventing elections, assassinating leaders, suppressing revolutions, manipulating trade unions and manufacturing 'news' -- in detail that's never before appeared in one book. Blum also shows how the mainstream media have frequently not bothered to probe, highlight or even report many of America's aggressive actions abroad. Effectively, this has helped the US Government camouflage its operations and intentions abroad ever since World War II. Washington's deception and the media's laxity combine to leave us functionally illiterate about the history of modern US foreign policy. And that, the author believes, is good neither for democracy, nor for development and world peace. This immensely readable account has been carefully pieced together from widely disparate sources and with a scrupulous eye to documentation." --
