Friends, collaborators, and childhood rivals, Briton Hadden and Henry R. Luce were not yet twenty-five when they started *Time*, the first newsmagazine, at the outset of the Roaring Twenties. By age thirty, they were both millionaires, having laid the foundation for a media empire. But their partnership was explosive and their competition ferocious, fueled by envy as well as love. When Hadden died at the age of thirty-one, Luce began to meticulously bury the legacy of the giant he was never able to best. In this groundbreaking, stylish, and passionate biography, Isaiah Wilner paints a

*In the 1990s reported autism cases among American children began spiking, from about 1 in 10,000 in 1987 to a shocking 1 in 166 today. This trend coincided with the addition of several new shots to the nation's already crowded vaccination schedule, grouped together and given soon after birth or in the early months of infancy. Most of these shots contained a little-known preservative*

*called thimerosal, which includes a quantity of the toxin mercury. Evidence of Harm explores the heated controversy over what many parents, physicians, public officials, and educators have called an "epidemic" of afflicted children. Following several families, David Kirby traces their struggle to understand how and why their once-healthy kids rapidly descended into silence or disturbed behavior, often accompanied by severe physical illness. Alarmed by the levels of mercury in the vaccine schedule, these families sought answers from their doctors, from science, from pharmaceutical companies that manufacture vaccines, and finally from the Center for*

But as they dug deeper, the families also found powerful allies in Congress and in the small community of physicians and researchers who believe that the rise of autism and other disorders is linked to toxic levels of mercury that accumulate in the systems of some children. An important and troubling book, Evidence of Harm reveals both the public and unsung obstacles faced by desperate families who have been opposed by the combined power of the federal government, health agencies, and pharmaceutical giants.
