“ Elie Sehnaoui, a Loughborough University and MIT-trained engineer, has written a fascinating and useful primer for young

engineers and architects as they prepare to launch their professional careers. He distills his long business experience working in Africa, the Middle East, and Europe into a series of short chapters on contracts, public relations, project financing, real estate development, and engineering law. Sehnaoui ' s most powerful and salient piece of advice is that in spite of the spread of globalization and English as the lingua franca of business, local traditions and cultures still matter. The engineers and architects most likely to succeed will be those who bother to familiarize themselves with the language and customs of the country or region in which they work. Civil engineers and designers can do no better than to carry this valuable field guide with them as they move from country to country and project to project. ” – Professor Philip S. Khoury, Associate Provost, Massachusetts Institute of Technology

Managing building services contractors can prove to be a minefield. The most successful jobs will always be those where building site managers have first built teams focused on tackling issues that might cause adversarial attitudes later on and jeopardize the project. The author shows how a simple common management approach can improve site managers' competency in overseeing building services contractors, sub traders and specialists, and maximize the effectiveness of time spent on building services.
