

Methodologies In Semantic Fieldwork By M Ryan Bochnak

This volume discusses methodological issues in conducting elicitation on semantic topics in a fieldwork situation. In twelve chapters discussing 11 language families from four continents, authors draw on their own fieldwork experience, pairing explicit methodological proposals with concrete examples of their use in the field. Several chapters cover issues specific to semantic topics such as modality, comparison, tense and aspect, and definiteness, while others focus on elicitation techniques more generally, addressing methodological issues such as the creation of elicitation plans, the choice of language in which to conduct elicitation, and the status of translation tasks. Together, the chapters of this volume demonstrate that elicitation on semantic topics, when conducted following sound methodologies, can and does produce reliable results. Given the high number of languages currently classified as endangered, conducting one-on-one fieldwork with native speaker consultants is critical for gathering new empirical findings that bear on linguistic theory.

Since the Asian financial crisis of the late 1990s, Indonesia has undergone a radical program of administrative decentralization and neoliberal reforms. In *Methods of Desire*, author Aurora Donzelli explores these changes through an innovative perspective—one that locates the production of neoliberalism in novel patterns of language use and new styles of affect display. Building on almost two decades of fieldwork, Donzelli describes how the growing influence of transnational lending agencies is transforming the ways in which people desire and voice their expectations, intentions, and entitlements within the emergent participatory democracy and restructuring of Indonesia's political economy. She argues that a largely overlooked aspect of the Era Reformasi concerns the transition from a moral regime centered on the expectation that desires should remain hidden to a new emphasis on the public expression of individuals' aspirations. The book examines how the large-scale institutional transformations that followed the collapse of the Suharto regime have impacted people's lives and imaginations in the relatively remote and primarily rural Toraja highlands of Sulawesi. A novel concept of the individual as a bundle of audible and measurable desires has emerged, one that contrasts with the deep-rooted reticence toward the expression of personal preferences. The spreading of foreign discursive genres such as customer satisfaction surveys, training sessions, electoral mission statements, and fundraising auctions, and the diffusion of new textual artifacts such as checklists, flowcharts, and workflow diagrams are producing forms of citizenship, political participation, and moral agency that contrast with the longstanding epistemologies of secrecy typical of local styles of knowledge and power. Donzelli's long-term ethnographic study examines how these foreign protocols are being received, absorbed, and readapted in a peripheral community of the Indonesian archipelago. Combining a telescopic perspective on our contemporary moment with a microscopic analysis of conversational practices, the author argues that the managerial forms of political rationality and the entrepreneurial morality underwriting neoliberal apparatuses proliferate through the working of small cogs, that is, acts of speech. By examining these concrete communicative exchanges, she sheds light on both the coherence and inconsistency underlying the worldwide diffusion of market logic to all domains of life.

A handy beginner's guide to linguistic fieldwork - from the preparation of the work to the presentation of the results.

The study of language has changed substantially in the last decades. In particular, the development of new technologies has allowed the emergence of new experimental techniques which complement more traditional approaches to data in linguistics (like informal reports of native speakers' judgments, surveys, corpus studies, or fieldwork). This move is an enriching feature of contemporary linguistics, allowing for a better understanding of a phenomenon as complex as natural language, where all sorts of factors (internal and external to the individual) interact (Chomsky 2005). This has generated some sort of divergence not only in research approaches, but also in the phenomena studied, with an increasing specialization between subfields and accounts. At the same time, it has also led to subfield isolation and methodological a priori, with some researchers even claiming that theoretical linguistics has little to offer to cognitive science (see for instance Edelman & Christiansen 2003). We believe that this view of linguistics (and cognitive science as a whole) is misguided, and that the complementarity of different approaches to such a multidimensional phenomenon as language should be highlighted for convergence and further development of its scientific study (see also Jackendoff 1988, 2007; Phillips & Lasnik 2003; den Dikken, Bernstein, Tortora & Zanuttini 2007; Sprouse, Schütze & Almeida 2013; Phillips 2013).

Linguistic Fieldwork

Sociolinguistic Fieldwork

A focus on tense, aspect, and modality. Second revised edition.

Studies in Meaning and Structure

Critical Approaches to Fieldwork

This volume brings together papers that discuss methodological issues in conducting elicitation on semantic topics in a fieldwork situation. Each author pairs explicit methodological proposals with concrete examples of their use in the field. The range of languages discussed span 11 language families and four continents.

Current semantic fieldwork research has shown that the study of modality cannot be conducted via translation alone, yet much of what we know about modal expressions across the world's language is still translation-based. This book aims to facilitate the study of modality across more diverse languages and a wider participant base by explaining and illustrating a nuanced set of methods, including storyboards, questionnaires, corpora research, experimental tasks, as well as a discussion of practical semantic fieldwork techniques. The methodological protocols tested and employed by the authors on underdescribed languages - spanning seven different language families - are intended to be applicable as cross-linguistic tools, while also indicating the successes and challenges of their contributions. Expanding the study of modality to a wider set of underdescribed languages will undoubtedly bring new insights into our theoretical understanding of modality and deepen our understanding of a cross-linguistic typology of modal expressions.

The endangered languages crisis is widely acknowledged among scholars who deal with languages and indigenous peoples as one of the most pressing problems facing humanity, posing moral, practical, and scientific issues of enormous proportions. Simply put, no area of the world is immune from language endangerment. The Oxford Handbook of Endangered Languages, in 39 chapters, provides a comprehensive overview of the efforts that are being undertaken to deal with this crisis. A comprehensive reference reflecting the breadth of the field, the Handbook presents in detail both the range of thinking about language endangerment and the variety of responses to it, and broadens understanding of language endangerment, language documentation, and language revitalization, encouraging further research. The Handbook is organized into five parts. Part 1, Endangered Languages, addresses the fundamental issues that are essential to understanding the nature of the endangered languages crisis. Part 2, Language Documentation, provides an overview of the issues and activities of concern to linguists and others in their efforts to record and document endangered languages. Part 3, Language Revitalization, includes approaches, practices, and strategies for revitalizing endangered and sleeping ("dormant") languages. Part 4, Endangered Languages and Biocultural Diversity, extends the discussion of language endangerment beyond its conventional boundaries to consider the interrelationship of language, culture, and environment, and the common forces that now threaten the sustainability of their diversity. Part 5, Looking to the Future, addresses a variety of topics that are certain to be of consequence in future efforts to document and revitalize endangered languages.

This book offers a state-of-the-art guide to linguistic fieldwork, reflecting its collaborative nature across the subfields of linguistics and disciplines such as astronomy, anthropology, biology, musicology, and ethnography. The handbook is an indispensable source, guide, and reference for everyone involved in linguistic and cultural fieldwork.

The Bloomsbury Handbook of Sonic Methodologies

Research Methods in Linguistics

The Verb in Nyakusa

This volume presents a historical-sociolinguistic description and analysis of Maritime Polynesian Pidgin. It offers linguistic and sociohistorical substantiation for a regional Eastern Polynesian-based pidgin, and challenges conventional Eurocentric assumptions about early colonial contact in the eastern Pacific by arguing that Maritime Polynesian Pidgin preceded the introduction of Pidgin English by as much as a century. Emanuel J. Drechsel not only opens up new methodological avenues for historical-sociolinguistic research in Oceania by a combination of philology and ethnohistory, but also gives greater recognition to Pacific Islanders in early contact between cultures. Students and researchers working on language contact, language typology, historical linguistics and sociolinguistics will want to read this book. It redefines our understanding of how Europeans and Americans interacted with Pacific Islanders in eastern Polynesia during early encounters and offers an alternative model of language contact.

Understanding Linguistic Fieldwork offers a diverse and practical introduction to research methods used in field linguistics. Designed to teach students how to collect quality linguistic data in an ethical and responsible manner, the key features include: A focus on fieldwork in countries and continents that have undergone colonial expansion, including Australia, the United States of America, Canada, South America and Africa; A description of specialist methods used to conduct research on phonological, grammatical and lexical description, but also including methods for research on gesture and sign, language acquisition, language contact and the verbal arts; Examples of resources that have resulted from collaborations with language communities and which both advance linguistic understanding and support language revitalisation work; Annotated guidance on sources for further reading. This book is essential reading for students studying modules relating to linguistic fieldwork or those looking to embark upon field research.

This Handbook of Methods in Cultural Anthropology, now in its second edition, maintains a strong benchmark for understanding the scope of contemporary anthropological field methods. Avoiding divisive debates over design and humanism, the contributors draw upon both traditions to explore fieldwork in practice. The second edition also effects major developments of the past decade, including: the rising prominence of mixed methods, the emergence of new technologies, and evolving views on ethnographic writing. Spanning the chain of research, from designing a project through methods of data collection and interpretive analysis, the Handbook features new chapters on ethnography of online communities, social survey research, and network and geospatial analysis. Considered discussion of ethics, epistemology, and the presentation of research results to diverse audiences round out the volume. The result is an essential guide for all scholars, professionals, and advanced students who employ fieldwork.

The field of Sound Studies has changed and developed dramatically over the last two decades involving a vast and dizzying array of work produced by those working in the arts, social sciences and sciences. The study of sound is inherently interdisciplinary and is undertaken both by those who specialize in sound and by others who wish to include sound as an intrinsic and indispensable element in their research. This is the first resource to provide a wide ranging, cross-cultural and interdisciplinary investigation and analysis of the ways in which researchers use a broad range of methodologies in order to pursue their sonic investigations. It brings together 49 specially commissioned chapters that ask a wide range of questions including: how can sound be used in current academic disciplines? Is sound as a methodological tool indispensable for Sound Studies and what can sound artists contribute to the discourse on methodology in Sound Studies? The editors also present 3 original chapters that work as provocative 'sonic methodological interventions' prefacing the 3 sections of the book.

Empirical Approaches to Linguistic Theory

An International Handbook of Natural Language Meaning

"It is common for grammars to include an introductory chapter that offers a general introduction to the language under investigation as well as its users. We encourage the grammar writer to include this type of information for the sign language to be described. If a certain variant of the sign language is described, this should be made clear at the outset. The structure of this part is fairly flexible. As can be seen from the table of contents, we suggest including information about (i) the history of the sign language, (ii) characteristics of the Deaf community, (iii) the status of the sign language, and (iv) previous linguistic work on the sign language. The last section in particular will have an impact on the content of subsequent parts, as we encourage the grammar writer to include findings from previous studies in the grammatical description of the sign language. Clearly, alternative structures are possible. The overview of previous linguistic work, for instance, could be provided under the "History" header, and Deaf culture and/or Deaf education could be discussed under dedicated first-level headers - to give just two examples. Also, depending on the available information, sub-headers could be added. Note that we adopt the convention of writing Deaf with a capital D when it refers to issues related to a community that is characterized by the use of a sign language. In contrast, deaf with a small d refers to the medical condition of not being able to hear. It is up to the grammar writer to decide whether to stick to this convention in the grammar"

First published in 2007, the Stuart Dymally in England with James VI in the early 17th century, when the contraction of negative forms of the English sentence began in earnest. (c)ronical) tag questions have been a great fascination to many users of English. Within the last sixty years, beginning with the birth of the generative paradigm, tag questions have equally been of particular interest to many scholars of linguistics from a variety of perspectives, especially those concerned with the syntax-semantics and socio-pragmatics of the English sentence. With the spread of English to other countries and the emergence of new Englishes in the post-colonial context of the non-native varieties spoken in former British colonies, it is particularly interesting to see how and why tag questions have evolved over time in daily usage in both form and function in different English speech communities around the world. The essays gathered here focus on this evolutionary trend of English tag questions, with special attention on the exoticisms that characterize current usage.

These four volumes map how the fieldwork approach to research has developed and matured over the past decades. Following on from the success of 2004's major work, Fieldwork (ed. Christopher Pole), the aim of this collection is to acknowledge the legacy and the traditions from which fieldwork emerged, but moreover to critically assess how best fieldwork can be used to engage with the lives as they are now lived. Though the generic task of fieldwork remains as it was - the challenge to 'get inside' and seek understanding about the social world - the literature included in these volumes also engages with the whys, whats and hows of using 'new' digital data placing current debates in context. The seminal articles included in this collection are further discussed and contextualised through the editor's introduction, which outlines the rationale for selection and provides an illuminating overview of the field. Volume One: Theoretical Ideas and the emergence of the fieldwork tradition Volume Two: Technique and technologies Volume Three: The purpose, task and ambitions of fieldwork Volume Four: Outcomes: style, quality and impact

Concise Encyclopedia of Semantics is a comprehensive new reference work aiming to systematically describe all aspects of the study of meaning in language. It synthesizes in one volume the latest scholarly positions on the construction, interpretation, clarification, obscenity, illustration, amplification, simplification, negotiation, contradiction, contraction and paraphrasing of meaning, and the various concepts, analyses, methodologies and technologies that underpin their study. It examines not only semantics but the impact of semantic study on related fields such as morphology, syntax, and typologically oriented studies such as 'grammatical semantics', where semantics has made a considerable contribution to our understanding of verbal categories like tense or aspect, nominal categories like case or possession, clausal categories like causatives, comparatives, or conditionals, and discourse phenomena like reference and anaphora. COSE also examines lexical semantics and its relation to syntax, pragmatics, and cognitive linguistics; and the study of how 'logical semantics' develops and thrives, often in interaction with computational linguistics. As a derivative volume from Encyclopedia of Language and Linguistics, Second Edition, it comprises contributions from 150 of the foremost scholars of semantics in their various specializations and draws on 20+ years of development in the parent work in a compact and affordable format. Principally intended for tertiary level inquiry and research, this will be invaluable as a reference work for undergraduate and postgraduate students as well as academics inquiring into the study of meaning and meaning relations within languages. As semantics is a centrally important and inherently cross-cutting area within linguistics it will therefore be relevant not just for semantics specialists, but for most linguistic audiences. The first encyclopedia ever published in this fascinating and diverse field Combines the talents of the world's leading semantics specialists The latest trends in the field authoritatively reviewed and interpreted in context of related disciplines Drawn from the richest, most authoritative, comprehensive and internationally acclaimed reference resource in the linguistics area Compact and affordable single volume reference format

The Experience of the Russian School of Field Linguistics

An Introduction to Its Methodology

Contemporary and Historical Archaeological Practice

The Second Edition of Content Analysis: An Introduction to Its Methodology is a definitive sourcebook of the history and core principles of content analysis as well as an essential resource for present and future studies. The book introduces readers to ways of analyzing meaningful matter such as texts, images, voices - that is, data whose physical manifestations are secondary to the meanings that a particular population of people brings to them. Organized into three parts, the book examines the conceptual and methodological aspects of content analysis and also traces several paths through content analysis protocols. The author has completely revised and updated the Second Edition, integrating new information on computer-aided text analysis. The book also includes a practical guide that incorporates experiences in teaching and how to advise academic and commercial researchers. In addition, Krippendorff clarifies the epistemology and logic of content analysis as well as the methods for achieving its aims. Intended as a textbook for advanced undergraduate and graduate students across the social sciences, Content Analysis, Second Edition will also be a valuable resource for practitioners in a variety of disciplines.

Relatively little is known about Africa's endangered languages. Unlike indigenous languages in Australia, North Asia, and the Americas, which are predominantly threatened by colonizers, African languages are threatened most immediately by other local languages. As a result, the threat of language extinction is perceived as lower in Africa than in other parts of the globe, and a disproportionate amount of research is devoted to the study of endangered African languages when compared to any other linguistically threatened region in the world. There are approximately 308 highly endangered languages spoken in Africa (roughly 12% of all African languages) and at least 201 extinct African languages. This volume hopes to illuminate and challenge this trend. Chapters offer both documentary and theoretical perspectives, emphasizing the symbiotic relationship between the two approaches and its implications for the preservation of endangered languages, both in the African context and more broadly. Documentary-oriented chapters deal with key issues in African language documentation including language preservation and revitalization, community activism, and data collection and dissemination methodologies, among others. Theoretically-oriented chapters provide detailed descriptions and analyses of phonetic, phonological, morphological, syntactic, and semantic phenomena, and connect these to current theoretical issues and debates. Africa's Endangered Languages provides thorough coverage of a continent's neglected languages that will spur linguists and Africanists alike to work to protect them.

Topics include the linguist's attitude, the work session and the roles of native speakers.

Linguistic Field Methods approaches the elicitation of linguistic data from native speaker informants in a novel and engaging manner. The authors follow introductory chapters surveying the general enterprise of field research with chapters exploring methods of eliciting data in eight major areas of current linguistic interest: phonetics, phonology, morphology, syntax, semantics, pragmatics, sociolinguistics and dialectology, and historical linguistics.

Semantics - Foundations, History and Methods

Language Contact in the Early Colonial Pacific

Methodologies in Semantic Fieldwork

Handbook of Methods in Cultural Anthropology

This work takes as its starting point the role of fieldwork and how this has changed over the past 150 years. The author argues against progressive accounts of fieldwork and instead places it in its broader intellectual context to critically examine the relationship between theoretical paradigms and everyday archaeological practice. In providing a much-needed historical and critical evaluation of current practice in archaeology, this book opens up a topic of debate which affects all archaeologists, whatever their particular interests.

A comprehensive guide to conducting research projects in linguistics, this book provides a complete training in state-of-the-art data collection, processing, and analysis techniques. The book follows the structure of a research project, guiding the reader through the steps involved in collecting and processing data, and providing a solid foundation for linguistic analysis. All major research methods are covered, each by a leading expert. Rather than focusing on narrow specializations, the text fosters interdisciplinarity, with many chapters focusing on shared methods such as sampling, experimental design, transcription and constructing an argument. Highly practical, the book offers helpful tips on how and where to get started, depending on the nature of the research question. The only book that covers the full range of methods used across the field, this student-friendly text is also a helpful reference source for the more experienced researcher and current practitioner.

Linguistic Fieldwork offers practical guidance on areas such as applying for funding, the first session on a new language, writing up the data and returning materials to communities. This expanded second edition provides new content on the results of research, on prosody elicitation, on field experiment design, and on working in complex syntax.

This edited volume provides up-to-date, succinct, relevant, and informative discussion about methods of data collection in sociolinguistic research. It covers the main areas of research design, conducting research, and sharing data findings with longer chapters and shorter vignettes written by a range of top sociolinguists, both veteran and emerging scholars. Here is the one-stop, go-to guide for the numerous quantitative, qualitative, and mixed methods that are used in sociolinguistic research, ensuring that Data Collection in Sociolinguistics will be not only useful in the classroom but also as a reference tool for active researchers. Approaches to Fieldwork

Field Research in Political Science

The Semantics of Evidentials

The Oxford Handbook of Endangered Languages

Modality in Underdescribed Languages

Looking for an easy-to-use, practical guide to conducting fieldwork in sociolinguistics? This invaluable textbook will give you the skills and knowledge required for carrying out research projects in 'the field', including: • How to select and enter a community • How to design a research sample • What recording equipment to choose and how to operate it • How to collect, store and manage data • How to interact effectively with participants and communities • What ethical issues you should be aware of. Carefully designed to be of maximum practical use to students and researchers in sociolinguistics, linguistic anthropology and related fields, the book is packed with useful features, including: • Helpful checklists for recording techniques and equipment specifications • Practical examples taken from classic sociolinguistic studies • Vivid passages in which students recount their own experiences of doing fieldwork in many different parts of the world

The series Handbooks of Linguistics and Communication Science is designed to illuminate a field which not only includes general linguistics and the study of linguistics as applied to specific languages, but also covers those more recent areas which have developed from the increasing body of research into the manifold forms of communicative action and interaction.

Since its inception around 1970, the study of New Religious Movements (NRMs) has evolved into an established multidisciplinary field. At the same time, both the movements and the scholars who study them have been the subjects of intense controversy. In this volume, a group of senior NRM scholars who have been instrumental in the development of the field will offer pivotal essays that present the basics of NRM scholarship along with guidance for teachers on classroom use. The book is organized topically around subjects that are both central to the study of NRMs and likely to be useful to non-specialists. Part I contains examinations of the definitional boundaries of the area of study, varying disciplinary perspectives on NRMs, unique methodological/ethical problems encountered in the study of NRMs, and the controversies that have confronted scholars studying NRMs and the movements themselves. Part II examines a series of topics central to teaching about NRMs: the larger sociocultural significance of the movements, their distinctive symbolic and organizational features, the interrelated processes of joining and leaving NRMs, the organization of gender roles in NRMs, media and popular culture portrayals of the movements, the occurrence of corruption and abuse within movements, and violence by and against NRMs. Part III provides informational resources for teaching about NRMs, which are particularly important in a field where knowing the biases of sources is crucial. With its interdisciplinary approach, the volume provides comprehensive, accessible information and perspectives on NRMs. It is an invaluable guide for instructors navigating this scholarly minefield.

Get to grips with the fundamentals of semantics research. Written by a team of world-class experts, this book introduces the subject for a broad audience of linguists, cognitive scientists, philosophers, and computer scientists. It explores the core concepts of sentential semantics and includes sections on questions, imperatives, copular clauses, and existential sentences. It also presents essential research on sentence types, and explains central concepts in the theory of information structure and discourse structure. Now in paperback for the first time since its original publication, the material in this modern classic is an ideal resource for anyone involved in semantics research.

Concise Encyclopedia of Semantics

Language, Morality, and Affect in Neoliberal Indonesia

A Student Guide

A Practical Guide

Methods of Desire

These lectures provide one of the first comprehensive introductions to semantic typology, the study of crosslinguistic variation in how languages represent reality. In addition, they survey research methods for field semantics, the study of linguistic meaning under fieldwork conditions.

Explains how field research contributes value to political science by exploring scholars' experiences, detailing exemplary practices, and asserting key principles.

The mental representation of language cannot be directly observed but must be inferred and modelled from its effects at second hand. Linguists have traditionally responded to this in two ways, either going for a fairly data-light approach and valuing theoretical creativity, or pursuing just those goals for which data is available and trusting to data-driven descriptive work. More recently, advances in technology and experimental techniques have made data gathering easier and more accessible, so that a theoretically informed but empirically based approach is rapidly growing in popularity. This synthesis permits linguists to combine the intellectual hypothesis generation of the theoreticians with the ability to deliver hard answers of the empiricist. This volume is a collection of papers in this direction, using mostly experiment methods to yield insights into syntactic and semantic structures, language processing, and acquisition. Papers report corpus data, neurological investigations, child language studies, and fieldwork from minority languages.

This volume provides an overview of experimental methods, approaches, and techniques used by field linguists of the Russian school, and highlights the fieldwork experience of Russian scholars working in regions with a range of languages that differ genetically, typologically, and in the degree of their preservation. The collection presents language and sociolinguistic data relating to fieldwork in diverse languages: Uralic, Altaic, Paleo-Siberian, Yeniseian, Indo-European Iranian, Vietic, Kra-Day, and Mayan languages, as well as pidgin. The authors highlight the fieldwork techniques they use, and the principles underlying them. The volume 's multidisciplinary approach covers linguistic, ethnolinguistic, sociolinguistic, educational, and ethnocultural issues. The authors explore problems associated with the study of minority languages and indicate diverse and creative techniques for data elicitation. Close collaboration with speakers lies at the core of their approach. The collection presents strategies for eliciting systems of knowledge from mother-tongue speakers, triggering linguistic self-awareness, and providing semantic and morphosyntactic context for their languages. This publication is intended for academics, and for specialists in the field of linguistics and minority and indigenous languages. It will also benefit students as a guide to field research, as well as language activists, interested in documenting and preserving their mother tongue.

Documentary and Theoretical Approaches

Ten Lectures on Field Semantics and Semantic Typology

Strengthening Arguments and Caressing the Social Wheel

Semantics of Evidentials

This book provides argues for a compositional, truth-conditional, crosslinguistic semantics for evidentiality, the linguistic encoding of the source of information on which a statement is based. Central to the proposed theory is the distinction between what propositional content is at-issue and what content is not-at-issue. Evidentials contribute not-at-issue content, and can affect the level of commitment a sentence makes to the main proposition, which is contributed by sentential mood. In this volume, Sarah Murray builds on recent work in the formal semantics of evidentials and related phenomena, and proposes a semantics that does not appeal to separate dimensions of illocutionary meaning. Instead, she argues that all sentences make three semantic contributions: at-issue content, not-at-issue content, and an illocutionary relation. At-issue content is presented and made available for subsequent anaphora, but is not directly added to the common ground; not-at-issue content directly updates the common ground, and the illocutionary relation uses a proposition to impose structure on the common ground, which, depending on the clause type, can trigger further updates. The analysis is supported by extensive empirical data from Cheyenne, drawn from the authors own fieldwork, as well as from English and a variety of other languages.

Nyakusa is an underdescribed Bantu language spoken by around 900,000 speakers in the Mboya Region of Tanzania. This book provides a detailed description of the verb in this language. The topics covered include the complex morphophonological and morphological processes, as well as verb-to-verb derivation, copula verbs and grammaticalized verbs of motion. The main body of the book consists of a detailed description of tense, aspect and modality constructions, which includes not only an in-depth discussion of their sentence level semantics, but also of their patterns of employment in discourse.

The best survey of cognitive linguistics available, this Handbook provides a thorough explanation of its rich methodology, key results, and interdisciplinary context. With in-depth coverage of the research questions, basic concepts, and various theoretical approaches, the Handbook addresses newly emerging subfields and shows their contribution to the discipline. The Handbook introduces fields of study that have become central to cognitive linguistics, such as conceptual mappings and construction grammar. It explains all the main areas of linguistic analysis traditionally expected in a full linguistics framework, and includes fields of study such as language acquisition, sociolinguistics, diachronic studies, and corpus linguistics. Setting linguistic facts within the context of many other disciplines, the Handbook will be welcomed by researchers and students in a broad range of disciplines, including linguistics, cognitive science, neuroscience, gesture studies, computational linguistics, and multimodal studies.

Understanding Linguistic Fieldwork

SignGram Blueprint

A Guide to Sign Language Grammar Writing

The first four lectures revolve around field semantics- research methods for studying linguistic meaning under fieldwork conditions. The remaining six lectures deal with semantic typology, the crosslinguistic study of how humans communicate about the world in terms of the meaning categories of the languages they speak. Together, the lectures present one of the first comprehensive introductions to either topic. A thread pervading the lectures involves the following questions: how much do languages vary in how they represent reality? To what extent does this variation reflect cultural differences? To what extent does it influence the nonverbal thinking of the speakers?
