Integration of problem-based learning and technology

In a fantasy world, you design and build the core of your application, the parts that do all the heavy lifting.

And the graphical user interface? Well, that's the domain of the hot-shot sitting one cube over, who went to school to learn how to give users sensible and effective control over the functionality you construct. In the real world, there is no hot-shot sitting one cube over, and you have to build the GUI yourself.

other text used but rather in the attitude towards these subjects. These subjects are seen as something which has to be taught because it is part of a preordained curriculum rather than a set of tools which are available to help people live a fuller, more productive and more interesting life. It is so enlightening when one hears people say, "I thought that when I left school I was leaving all the maths stuff behind me!" or "I was bored

witless by all those numbers and formulas [sic] that were forced down my throat." This book was written out of a frustration at seeing statistics taught through formal methods using large scale statistic software packages. It seemed to me that very little was learned by this process and quite often both the teachers and the students were in denial. It is true that the students were generally able to pick up enough knowledge to pass an examination or to
