“gamification.” As more and more organizations, practices, products, and services are infused with elements from games and play to make them more engaging, we are witnessing a veritable ludification of culture. Yet while some celebrate gamification as a possible answer to mankind's toughest challenges and others condemn it as a marketing ruse, the question remains: what are the ramifications of this “gameful world”? Can game design energize society and individuals, or will algorithmic incentive systems become our new robot overlords? In this book, more than fifty luminaries

An application administrator installs, updates, optimizes, debugs and otherwise maintains computer applications for an organization. In most cases, these applications have been licensed from a third party, but they may

have been developed internally. Examples of application types include enterprise resource planning (ERP), customer resource management (CRM), and point of sale (POS), legal contract management, time tracking, accounts payable/receivable, payroll, SOX compliance tracking, budgeting, forecasting and training. In many cases, the organization is absolutely dependent that these applications be kept running. The importance of application administrators and the level to which

organizations depend upon them is easily overlooked. Application Administrators Handbook provides an overview of every phase of administering an application, from working with the vendor before installation, the installation process itself, importing data into the application, handling upgrades, working with application users to report problems, scheduling backups, automating tasks that need to be done on a repetitive schedule, and finally retiring an application.
