comets by exploiting regions in space where motion is very sensitive (or chaotic). It also represents an ideal introductory text to celestial mechanics, dynamical systems, and dynamical astronomy. Bringing together wide-ranging research by others with his own original work, much of it new or previously unpublished, Edward Belbruno argues that regions supporting chaotic motions, termed weak stability boundaries, can be estimated. Although controversial until quite recently, this method was in fact first applied in 1991, when Belbruno used a new route developed from this theory to get a stray Japanese satellite back on

course to the moon. This application provided a major verification of his theory, representing the first application of chaos to space travel. Since that time, the theory has been used in other space missions, and NASA is implementing new applications under Belbruno's direction. The use of invariant manifolds to find low energy orbits is another method here addressed. Recent work on estimating weak stability boundaries and related regions has also given mathematical insight into chaotic motion in the three-body problem. Belbruno further considers different capture and escape mechanisms, and resonance

Providing a rigorous theoretical framework that incorporates both recent developments such as Aubrey-Mather theory and established fundamentals like Kolmogorov-Arnold-Moser theory, this book represents an indispensable resource for graduate students and researchers in the disciplines concerned as well as practitioners in fields such as aerospace engineering.

A dad's "charming, funny" memoir of trying to pass along his refined culinary tastes, with some kid-friendly recipes included (Neal Pollack). Armed with the belief that kids don't need puree in a jar or special menus when eating out, restaurant critic and food writer Matthew Amster-Burton was determined to share his love of all things culinary with his daughter, Iris. From the high of rediscovering tastes through a child's unedited reaction to the low of realizing his precocious vegetable fiend was just going through a phase, Matthew discovered that raising an adventurous eater is about exposure, invention, and

As he chronicles his jaw-dropping childhood adventures, Bednar also introduces his siblings (the nine Ms) and shares the inspirational story of his brother Merrick, a priest-in-the-making whose profound health crises not only strengthen

This book analyzes the emergence of ethnic consciousness among Hakka-speaking people in late imperial China in the context of their migrations in search of economic opportunities. It poses three central questions: What determined the temporal and geographic pattern of Hakka and Pengmin (a

largely Hakka-speaking people) migration in this era? In what circumstances and over what issues did ethnic conflict emerge? How did the Chinese state react to the phenomena of migration and ethnic conflict? To answer these questions, a model is developed that brings together three ideas and types of data: the analytical concept of ethnicity; the history of internal migration in China; and the regional systems methodology of G. William Skinner, which has been both a breakthrough in the study of Chinese society and an approach of broad social-scientific application. Professor Skinner has also

prepared eleven maps for the book, as well as the Introduction. The book is in two parts. Part I describes the spread of the Hakka throughout the Lingnan, and to a lesser extent the Southeast Coast, macroregions. It argues that this migration occurred because of upswings in the macroregional economies in the sixteenth century and in the late seventeenth and early eighteenth centuries. As long as economic opportunities were expanding, ethnic antagonisms were held in check. When, however, the macroregional economies declined, in the mid-seventeenth and late eighteenth centuries, ethnic

tensions came to the fore, notably in the Hakka-Punti War of the mid-nineteenth century. Part II broadens the analysis to take into account other Hakka-speaking people, notably the Pengmin, or "shack people." When new economic opportunities opened up, the Pengmin moved to the peripheries of most of the macroregions along the Yangzi valley, particularly to the highland areas close to major trading centers. As with the Hakka, ethnic antagonisms, albeit differently expressed, emerged as a result of a declining economy and increased competition for limited
