Research has shown that, for professional development to be effective, several components of instruction should be considered: reflection on practice, problems arising in practice, subject matter content, and principles of adult learning. Practice-Based Professional Development in Education is a cutting-edge research publication that explores both effective and ineffective professional development practices and presents arguments for why adult learning theory should be considered when designing a professional

Modern businesses and organizations understand that corporate social responsibility (CSR) has become an important factor for sustainable success. At the same time CSR has established itself as a widely accepted element of courses in managerial training and education. This book, designed to support CSR teaching, collects 14 essays that clearly illustrate and explain the benefits and

challenges of socially responsible corporate policies. Aligning theory and practice, the book focuses on four central themes:

management, environment and sustainability, corporate social responsibility, and accounting and financial reporting. Business students and experienced managers alike will find this book a valuable resource that helps them to discover the strong forces that link successful management with corporate social responsibility.

Analyzing evidence from current academic research as well as the popular press, this concise volume defines and examines the trajectory of instructional design and technologies toward more human-centered and specialized products, services, processes, environments, and systems. Examples from education, healthcare, business, and other sectors offer real-world demonstrations for scholars and graduate students of educational technology, instructional design, and business development. The book features insights into the future of professors, public schools, equity and access, extended technologies, open educational resources, and more,

'Practice Development in Community Nursing' describes what is meant by practice development, the theories underpinning practice development and brings together accounts of community nurses involved in practice development for those embarking on similar work. Examples are provided of the process of practice development and the book also illustrates how it works with examples from practitioners, followed by a conclusion focusing on the future of practice development.

This book explores the role that arts and culture can play in supporting global international development. The book argues that arts and culture are fundamental to human development and can bring considerable positive results for helping to empower communities and provide new ways of looking at social transformation. Whilst most literature addresses culture in abstract terms, this book focuses on practice-based, collective, community-focused, sustainability-minded, and capacity-building examples

Development provides a comprehensive introduction to a software development method based on VDM-SL. Each development step is rigorously justified, and the strategies and transformations used are justified and explained mathematically. The approach provides the formal semantics of a simple, but powerful, wide-spectrum programming language and gives a formal definition of both algorithmic and data refinement. Unlike other texts, it covers both the theory and practice of program development. Although based on VDM-SL, no knowledge of this language is assumed, thus making it widely accessible. A Theory and Practice of Program Development is intended for 3rd/4th year undergraduate and postgraduate students taking formal methods and

This book is the first to directly address the question of how to bridge what has been termed the "great divide" between the approaches of systems developers and those of social scientists to computer supported cooperative work--a question that has been vigorously debated in the systems development literature. Traditionally, developers have been trained in formal methods and oriented to engineering and formal theoretical problems; many social scientists in the CSCW field come from humanistic traditions in which results are reported in a narrative mode. In spite of their

have been cooperating more and
more in the last decade, as the

"people problems" associated with

evident to everyone. The authors

have been encouraged to examine,
rigorously and in depth, the

theoretical basis of CSCW. With

contributions from field leaders in the
United Kingdom, France, Scandinavia,

Mexico, and the United States, this

volume offers an exciting overview of
the cutting edge of research and

more on the lessons that can be
learned at the design stage given
that one wants to build a CSCW

system incorporating these
insights--what kind of work does one
need to do and how is understanding
of design affected? The final part
looks at the integration of social and

the contributors make the argument
that the social and technical are
irremediably linked in practice and so
the "great divide" not only should be
a thing of the past, it should never
have existed in the first place.

Each chapter contains up-to-date and relevant information about select aspects of architecture, and the changes this information will have on the future of the profession. The Companion contains thirty-five chapters, divided into seven parts: Theoretical Stances, Technology, Sustainability, Behaviorism, Urbanism, Professional Practice and Society. Topics include: Evidence-Based Design, Performativity, Designing for Net Zero Energy, The Substance of Light in Design, Social Equity and Ethics for Sustainable Architecture, Universal Design, Design Psychology, Architecture, Branding and the Politics of Identity, The Role of BIM in Green

Architecture, Public Health and the Design Process, Affordable Housing, Disaster Preparation and Mitigation, Diversity and many more. Each chapter follows the running theme of examining external forces applied to the practice and discipline of architecture in order to uncover the evolving theoretical tenets of what constitutes today's architectural profession, and the tools that will be required of the future architect. This book considers architecture's interdisciplinary nature, and addresses its current and evolving perspectives related to social, economic, environmental, technological, and globalization trends. including poverty amelioration,

From a practice perspective, the book will reassert the importance of high levels of professional competence building upon decades of experience in the field around the world by development practitioners working in community work, social work, health, adult education, environmental protection, local economic development, urban design, cultural work and other disciplines concerned to support effective community development. This book provides an essential overview of sustainable development research in Mexico. It discusses the empirical research

methods and findings, as well as practical initiatives and projects being pursued in Mexico and other countries in the region. Although a number of Mexican universities are now conducting high-quality research on matters related to sustainable development, there are few publications that offer a multidisciplinary overview of research efforts for a broader audience. This book addresses that gap in the literature, providing researchers at Mexican universities – including those from other countries working in Mexico – with an opportunity to present their work, i.e. curriculum innovations, empirical work, activities, case studies, and practical projects. International Practice Development in Nursing builds on Practice Development in Nursing, edited by the same editors and is the first book to develop a truly international practice development perspective. Practice development is a key concept in developing effective nursing care which is firmly embedded in health service modernisation agendas, clinical governance strategies, team and cultural developments and in quality improvements that directly impact on patient care in the UK and internationally. Practice development acknowledges the interplay between the development of knowledge and skills, enablement strategies, facilitation and a systematic, rigorous and continuous processes of emancipatory change in order to achieve evidence-
