Evaluating with the Regression-Discontinuity approach has been used mainly within the context of compensatory education. Yet this approach is one of the strongest methodological alternatives to randomized experiments for accurately studying the effects of social programmes. Trochim thoroughly examines the Regression-Discontinuity approach as an applied research technique -- its design, its application, and its strengths -- and concludes that the

The CDC-NCI study claims that the fallout might have led to approximately 11,000 excess deaths, most caused by thyroid cancer linked to exposure to iodine-131. The committee noted that CDC and NCI used the best available data to estimate exposure and health hazards. The committee does not recommend an expanded study of exposure to radionuclides other than 131I since radiation doses from those radionuclides were much lower than those from 131I. It*
