Practitioner-oriented sampling of the major tools used to deal with current public-sector fiscal issues. Directed at state and local financial managers, Government Budgeting presents, in a short and succinct manner, a sampling of the major tools used to deal with current fiscal problems. George M. Guess provides examples from a number of states and localities and explains how to use them in diverse situations. At the end of each chapter, cases, exercises and/or questions are provided for further study. The chapters cover the major topics needed by today's practitioners: core concepts and definitions of budgeting and financial management; how to analyze the revenue budget and evaluate revenue sources; how one might plan expenditures and prepare an annual request; how capital projects should (and should not) be planned, analyzed, compared, placed into a capital improvements program, and financed; and the critical topic of budget implementation. Without claiming that practical tools can resolve every problem, the book suggests that if all stakeholders used such analytic tools the outcomes might be better for the general welfare.

Over the years, a shortage of funds has resulted in a huge deficit in government budgets for infrastructure, especially in developing economies. It is no longer feasible for governments to bear the entire burden of funding public infrastructure. Given that an inadequate supply of public infrastructure poses a challenge for the economic development of any country, partnerships with the private sector to fund public infrastructure procurement has started to be relied on as an alternative to traditional public procurement. Public-Private Partnerships are an arrangement that allow private entities to fund, design, manage and operate public infrastructure for a term in exchange for the payment of tolls by users or the government may well be the solution to the infrastructure crisis in many developing economies. This book examines the role of law in the adoption, implementation and regulation of Public-Private Partnership in selected developing economies including Brazil, India, Nigeria and South Africa to address how to deal with overlapping laws and how the law can protect assets invested in PPP in order to attract private sector interests in infrastructure financing in developing market, showing how law can be used to create, sustain and promote PPP frameworks that take into account local circumstances in developing economies.
