Journalist and bestselling author Kristin Ohlson makes an elegantly argued, passionate case for "our great green hope"—a way in which we can not only heal the land but also turn atmospheric carbon into beneficial soil carbon—and potentially reverse global warming. Thousands of years of poor farming and ranching practices—and, especially, modern

agriculture—have led to the loss of up to 80 percent of carbon from the world's soils. That carbon is now floating in the atmosphere, and even if we stopped using fossil fuels today, it would continue warming the planet. As the granddaughter of farmers and the daughter of avid gardeners, Ohlson has long had an appreciation for the soil. A chance conversation with a local chef led her to the crossroads of science, farming, food, and environmentalism and the

Ohlson introduces the visionaries—scientists, farmers, ranchers, and landscapers—who are figuring out in the lab and on the ground how to build healthy soil, which solves myriad problems: drought, erosion, air and water pollution, and food

John Alcorn \ Evolution By Design is a celebration of the life and work of legendary graphic designer and illustrator, John Alcorn (1935-1992). A never-before released overview of one of the most versatile designers of the 20th century, replete with revealing essays and several hundred images spanning over 4 decades, from the artist's formative years to his untimely death at age 56. His unique style can be found in hundreds of books (Random House, Simon & Schuster, Rizzoli, Longanesi, Guanda) movie posters (Fellini's "Amarcord"), magazines and record covers. Alcorn's career included a sound training at the Push Pin Studios, the celebrated design studio founded by Milton Glaser,

Seymour Chwast, Reynold Ruffins, and Edward Sorel. His work has been exhibited in various locations including The Louvre in Paris.

Simen Johan's ongoing series of photographs and sculptures, "Until the Kingdom Comes," begun in 2005, depicts a natural world that is at once familiar and otherworldly. Most (but not all) of the images are intricate digital constructs incorporating elements the artist photographed in various geographical locations. Towering giraffes, captured in various US zoos, populate a hazy, desolate landscape created from images taken in Turkey, Bali and Iceland; spectacular Javan peacocks from Asia are camouflaged within a Spanish pepper tree; and the interior of an Icelandic volcano forms the setting for a gooey tar pit where Peruvian yellow-hooded blackbirds nest. Each image confuses the

boundaries between opposing forces such as the natural and the artificial, the serene and the eerie, the primal and the mindful. These dynamic tensions reflect the internal conflicts and contradictions inherent to human nature that fuel Johan's work. Only a limited quantity of this oversize, unbound volume is available.

This fascinating visual account of firearms shows everything from the earliest cannons to modern weapons of war. It also highlights how gun technology and military tactics developed in tandem over time. Centuries ago, the Chinese discovered that if they put gunpowder and a projectile into a metal tube and ignited it, they could

fire the projectile with enormous force. The first guns were born. Firearms: An Illustrated History showcases over 300 firearms including pistols, revolvers, rifles, shotguns, machine-guns, and artillery, each with annotated close-up photographs and details of their origins, barrel, and caliber. It details the use of the firearms, not just in the military but for sport, hunting, and law enforcement. This comprehensive volume traces the history of firearms, highlighting

"turning points" such as the rifle with its parallel spiraled grooves that could impart a spin to bullets making them fly straighter. It also showcases iconic firearms such as the Walther PPK self-loading pistol popularised in James Bond films. With information on the great gunsmiths including Beretta and Kalashnikov and a detailed guide to how guns work, Firearms: An Illustrated History is an essential purchase for everyone interested in guns and military history. Formation of Character is the fifth volume of Charlotte Mason's Homeschooling series. The chapters stand alone and are valuable to parents of children of all ages. Part I includes case studies of children (and adults) who cured themselves of bad

habits. Part II is a series of reflections on subjects including both schooling and vacations (or "stay-cations" as we now call them). Part III covers various aspects of home schooling, with a special section detailing the things that Charlotte Mason thought were important to teach to girls in particular. Part IV consists of examples of how education affected outcome of character in famous writers of her day. Charlotte Mason was a late nineteenth-century British educator whose ideas were far ahead of her time. She believed that children are born persons worthy of respect, rather than

Her method of education, still used by some private schools and many homeschooling families, is gentle and flexible, especially with younger children, and includes first-hand exposure to great and noble ideas through books in each school subject, conveying wonder and arousing curiosity, and through reflection upon great art, music, and poetry; nature observation as the primary means of early science teaching; use of

manipulatives and real-life application to understand mathematical concepts and learning to reason, rather than rote memorization and working endless sums; and an emphasis on character and on cultivating and maintaining good personal habits. Schooling is teacher-directed, not child-led, but school time should be short enough to allow students free time to play and to pursue their own worthy interests such as handicrafts. Traditional Charlotte Mason schooling is firmly based on Christianity, although the method is also used successfully by s
