Montessori: A Modern Approach has been called the single best book for anyone -- educator, childcare professional, and especially parent -- seeking answers to the questions: What is the Montessori method? Are its revolutionary ideas about early childhood education relevant to today's world? And most important, especially for today's dual-career couples. Is a Montessori education right for my child? Paula Polk Lillard writes both as a trained educators and as a concerned parent -- she has many years as a public school teacher, but it was her enthusiasm for the education her own child experienced in a Montessori school that led her to become a leading voice in the Montessori movement in this country. Her book offers the clearest and most concise statement of the Montessori method of child development and education available today.

This book is intended to follow Education for a New World and to help teachers to envisage the child’s needs after the age of six. We claim that the average boy or girl of twelve years who has been educated till then at one of our schools knows at least as much as the finished High School product of several years’ seniority, and the achievement has been at no cost of pain or distortion to body or mind. Rather are our pupils equipped in their whole being for the adventure of life, accustomed to the free exercise of will and judgment, illuminated by imagination and enthusiasm. Only such pupils can exercise rightly the duties of citizens in a civilised commonwealth. The first four chapters are mainly psychological, showing the changed personality with which the teacher has to deal at six years of age, and the need for a corresponding change of approach. The secret of success is found to lie in the right use of imagination in awakening interest, and the stimulation of seeds of interest already sown by attractive literary and pictorial material, but all correlated to a central idea, of greatly ennobling inspiration!the Cosmic Plan, in which all, consciously or unconsciously, serve the great Purpose of Life. It is shown how the conception of evolution has been modified of late through geological and biological discoveries, so that self-perfection now has to yield precedence to service among the primary natural urges. The next eight chapters show how the Cosmic Plan can be presented to the child, as a thrilling tale of the earth we live in, its many changes through slow ages when water was Nature’s chief toiler for accomplishment of her purposes, how land and sea fought for supremacy, and how equilibrium of elements was achieved, that Life might appear on the stage to play its part in the great drama. Illustrated as it must be by fascinating, charts and diagrams, the creation of earth as we now know it unfolds before the child’s imagination, and always with emphasis on the function each agent has to perform in Nature’s household, whether consciously or unconsciously, failure in this alone leading to extinction. So the talc proceeds till Palaeolithic Man appears, most significantly traced by the tools he used on his environment rather than by physical remains of so slight a creature. The new element of mind is brought to creation by man, and from that time the children are helped to see the great acceleration that has taken place in evolution. They learn to reverence the earliest pioneers, who toiled for purposes unknown to them but now to be recognised. Nomadic men and settlers alike contributed to build up early communities, and by interchanges of war and peace to share and spread social amenities. From chapter thirteen brief descriptions are given of some of the earliest civilizations, particularly with a view to their impacts on each other, showing human society as slowly organising itself towards unity, just as, in the individual human being, organs are built around separate centres of interest, to be later connected by the blood-circulatory system and the nerves, into an integrated human organism. So the child is led, by review of some of the most thrilling epochs of world-history, to see that so far humanity has been in an embryonic stage, and that it is just now emerging into true birth, able to consciously realise its true unity and function. The last chapters go back to the psychological point of view, urging on educators the supreme importance, to the nation and to the world, of the tasks imposed on them. Not in the service of any political or social creed should the teacher work, but in the service of the complete human being, able to exercise in freedom a self-disciplined will and judgment, unperverted by prejudice and undistorted by fear.

Montessori education is an educational approach created by Italian physician and educator Dr. Maria Montessori. Montessori realized many of her ideas while working with mentally challenged children. In her first school, La Casa Dei Bambini, that was opened to working class children in the poor neighborhood of San Lorenzo in Rome. Her method characterized by freedom within limits, emphasis on independence, and respect for a child’s natural physical, psychological, and social development. Despite a range of practices exist with the name "Montessori," the Association Montessori Internationale (AMI) and also the American Montessori Society (AMS) cite these elements as essential: Mixed age classrooms; classrooms for students ages 30 months or 3 to 6 years old are the most common by far, but 0-3, 6-9, 9-12, 12-15, and 15-18-year-old classrooms exist also. Student choice of pursuit from within a prescribed array of options. Uninterrupted segments of work time, ideally three hours A discovery model, where students learn notions from working with materials, rather than by direct education. Specialized pedagogical materials developed by Montessori and her collaborators. Freedom of movement within the classroom. A trained Montessori teacher. Dr Montessori Montessori moved forward with her plan to study medicine. She appealed to Guido Baccelli, the teacher of clinical medicine at the University of Rome, but was actively discouraged. Nonetheless, in 1890, she enlisted in the University of Rome in a qualification course in natural sciences, succeeding examinations in botany, anatomy, zoology, experimental physics, histology, and general and organic chemistry, and receiving her diploma di licenza in 1892. This degree, with additional studies in Italian and Latin, qualified her for entrance into the medical program at the University in 1893

These books will be of special interest to Montessori teachers or trainee teachers, acting as a support to, but not as a substitute for, Montessori teacher training. In addition parents, teachers and others who wish to find out about how children develop and how to help them as they grow, will find the books useful and interesting. The first two books (At the Heart of Montessori 1 and 2) should be read as a foundation as they apply to all age groups. Then choose the book that relates to the age of choice. Volume 4 relates to the pre-school child, ages 3- years. At the Heart of Montessori series provides a thorough and easy-to-follow explanation of Maria Montessori’s philosophy and educational method for all ages from birth to adolescence.

"Highly recommended for educators, parents, and moderate feminists who seek inspiration from one of the most accomplished women of this or any other age."—Publishers Weekly The definitive biography of Maria Montessori—physician, feminist, social reformer, educator, and one of the most admired, influential, and controversial women of the twentieth century. Maria Montessori effected a worldwide revolution in the classroom. She developed a new method of educating the young and inspired a movement that carried it into every corner of the world. This is the story of the woman behind the public figure—her accomplishments, her ideas, and her passions. Montessori broke the mold imposed on women in the nineteenth century and forged a new one, first for herself and eventually for those who came after her. Against formidable odds she became the first woman to graduate from the medical school of the University of Rome and then devoted herself to the condition of children considered uneducable at the time. She developed a teaching method that enabled them to do as well as normal children, a method which then led her to found a new kind of school—the Casa dei Bambini, or House of Children—which gained her worldwide fame and still pervades classrooms wherever young children learn. This biography is not only the story of a groundbreaking feminist but a vital chapter in the history of education.

In this 6-12 months, another shift has occurred, babies aren’t just randomly grasping any more, but they are using that grasp to do something the object. They are making more and more purposeful movements, starting to get places, and starting to do things. This is one of my personal favorite ages. These are approximate and will change slightly based on each individual child! Use this as a guide and not a strict schedule. This is particularly true here, where your child’s ability to sit independently might influence the time they are able to complete some of these tasks. This book will gives you a general idea of the types of toys a baby might interisted at this time. Enjoy!

One hundred and ten years ago, Maria Montessori, the first female physician in Italy, devised a very different method of educating children, based on her observations of how they naturally learn. In Montessori, Angeline Stoll Lillard shows that science has finally caught up with Maria Montessori. Lillard presents the research behind nine insights that are foundations of Montessori education, describing how each of these insights is applied in the Montessori classroom. In reading this book, parents and teachers alike will develop a clear understanding of what happens in a Montessori classroom and, more importantly, why it happens and why it works. Lillard explains the scientific basis for Montessori's system and the distinctions between practices in traditional, "Montessomething," and authentic Montessori education. Furthermore, in this new edition, she presents recent studies showing evidence that this alternative to traditional schooling does indeed make a difference. Montessori is indispensable reading for anyone interested in teaching, training, or considering Montessori schooling, in developmental psychology, or in understanding about human learning and education overall.

In this book the author shares wisdom gained in almost fifty years of Montessori experience. It contains a compilation of stories from the author's own teaching experience, and information shared as a Montessori school consultant, guest lecturer on teacher-training courses, and at conferences and workshops in such places as New Zealand, Thailand, Morocco, Mongolia, Peru, Colombia, Albania, and the USA. Although the majority of the information is intended for the Montessori teacher of children from 2.5 to six years, there is also information of value to those working with infants, older children, and adults, and a detailed glossary of Montessori terms. The words "Cosmic Education" refer to the Montessori practice of introducing the whole world-science, arts, history, and geography-to young children through age-appropriate practical life lessons, sensorial experiences, experiments, and language. With this preparation at an early and impressionable age, children learn to love the world in all its aspects, and as they grow up will have the tools to make sense of the world and the cosmos and to find a place in it as valuable contributing members.

According to the working definition of the International Big History Association, 'Big History seeks to understand the integrated history of the Cosmos, Earth, Life and Humanity, using the best available empirical evidence and scholarly methods.' In recent years Big History has been developing very fast indeed. Big History courses are taught in the schools and universities of several dozen countries. Hundreds of researchers are involved in studying and teaching Big History. The unique approach of Big History, the interdisciplinary genre of history that deals with the grand narrative of 13.8 billion years, has opened up a vast amount of research agendas. Big History brings together constantly updated information from the scientific disciplines and merges it with the contemplative realms of philosophy and the humanities. It also provides a connection between the past, present, and future. Big History is a colossal and extremely heterogeneous field of research encompassing all the forms of existence and all timescales. Unsurprisingly, Big History may be presented in very different aspects and facets. In this volume the Big History is presented and discussed in three different ways. In its first part, Big History is explored in terms of methodology, theories of knowledge, as well as showcasing the personal approach of scholars to Big History. The second section comprises such articles that could clarify Big History's main trends and laws. The third part of this book explores the nature of teaching Big History as well as profiling a number of educational methods. This volume will be useful both for those who study interdisciplinary macroproblems and for specialists working in focused directions, as well as for those who are interested in evolutionary issues of Astrophysics, Geology, Biology, History, Anthropology, Linguistics and other areas of study. More than that, this edition will challenge and excite your vision of your own life and the exciting new discoveries going on around us!

The Italian educator and physician Maria Montessori is best known for the teaching method that bears her name, but historian Erica Moretti reframes Montessori's work, showing that pacifism was the foundation of her pioneering efforts in psychiatry and pedagogy.

Paula Lillard, director of a Montessori school ranging in age from 18 months to fifteen years, provides a clear and cogent introduction to the Montessori program for the elementary and later years. In detailed accounts, Lillard shows how children acquire the skills to answer their own questions, learn to manage freedom with responsibility, and maintain a high level of intellectual stimulation by using the Montessori method. This is an essential handbook for parents and teachers who have chosen the Montessori alternative for the older child.

Maria Montessori (1870-1952) developed both a philosophy and a method of education that are becoming even more relevant as our society races forward. Montessori focused on finding a method of education that matched our true human nature. This book relates to the 6-12 years old child and this is considered to be the prime learning stage.

Is today's fast-paced media culture creating a toxic environment for our children's brains? In this landmark, bestselling assessment tracing the roots of America's escalating crisis in education, Jane M. Healy, Ph.D., examines how television, video games, and other components of popular culture compromise our children's ability to concentrate and to absorb and analyze information. Drawing on neuropsychological research and an analysis of current educational practices, Healy presents in clear, understandable language: -- How growing brains are physically shaped by experience -- Why television programs -- even supposedly educational shows like Sesame Street -- develop "habits of mind" that place children at a disadvantage in school -- Why increasing numbers of children are diagnosed with attention deficit disorder -- How parents and teachers can make a critical difference by making children good learners from the day they are born

Lillard, however, does much more than explain the scientific basis for Montessori's system: Amid the clamor for evidence-based education, she presents the studies that show how children learn best, makes clear why many traditional practices come up short, and describes an ingenious alternative that works. Now with a foreword by Renilde Montessori, the youngest grandchild of Maria Montessori, Montessori offers a wealth of insights for anyone interested in education.

This is the first thorough historical account of Chief Seattle and his times--the story of a half-century of tremendous flux, turmoil, and violence, during which a native American war leader became an advocate for peace and strove to create a successful hybrid racial community. When the British, Spanish, and then Americans arrived in the Pacific Northwest, it may have appeared to them as an untamed wilderness. In fact, it was a fully settled and populated land. Chief Seattle was a powerful representative from this very ancient world. Historian David Buerge has been researching and writing this book about the world of Chief Seattle for the past 20 years. Buerge has threaded together disparate accounts of the time from the 1780s to the 1860s--including native oral histories, Hudson Bay Company records, pioneer diaries, French Catholic church records, and historic newspaper reporting. Chief Seattle had gained power and prominence on Puget Sound as a war leader, but the arrival of American settlers caused him to reconsider his actions. He came to embrace white settlement and, following traditional native practice, encouraged intermarriage between native people and the settlers, offering his own daughter and granddaughters as brides, in the hopes that both peoples would prosper. Included in this account are the treaty signings that would remove the natives from their historic lands, the roles of such figures as Governor Isaac Stevens, Chiefs Leschi and Patkanim, the Battle at Seattle that threatened the existence of the settlement, and the controversial Chief Seattle speech that haunts to this day the city that bears his name.
