

Msc Economic Policy Methods Seminar

Competition authorities are increasingly interested in understanding the impact of their activities on markets and consumers. The goal is to improve competition policy rules and decision-making practices and to get robust evidence on the benefits of competition and competition policy for society as a whole. Discussions with competition authorities, practitioners and academics have shown the need to take stock of the experience gained in this field by the European Commission and to present it in an easily accessible way. The studies collected in this volume – prepared by senior Commission officials and competition policy experts – range from the ex post evaluation of specific policy interventions to the assessment of the broader impact of competition policy. The issues and topics examined include the following: objectives and scope of evaluations by the European Commission; description of counterfactual evaluation techniques used; conditions for a successful ex post evaluation of a competition policy intervention; a wide selection of individual cases covering a variety of economic sectors; applications in merger control, antitrust and State aid; direct benefits of competition policy interventions for consumers; deterrent effects of such interventions on market participants; and macroeconomic outcomes in terms of job creation, productivity and GDP growth. This matchless book assembles within a single volume all that is needed for competition policy analysts and practitioners to undertake ex post economic evaluations. While its collection of state-of-the-art ex post evaluation studies has a clear value for competition authorities, it is sure to be welcomed as well by competition law practitioners in the private sector, who will greatly appreciate the effort made to cast a critical eye on decisions taken in the past. Moreover, it allows for addressing some of the new challenges facing competition policymakers. Fabienne Ilzkovitz is Principal Advisor responsible for the economic evaluation of competition policy within the Directorate-General for Competition of the European Commission, and since 2014, she has coordinated various ex post evaluation projects in the Directorate-General. She is also Associate Professor of Economics in the Solvay Brussels School of Economics and Management at the Université Libre de Bruxelles, Belgium. Adriaan Dierx is Senior Expert on ex post economic evaluation within the Directorate-General for Competition of the European Commission. He has managed a number of studies aimed at assessing the economic impact of the European Commission's competition policy interventions.

This volume offers a comprehensive overview of the many ways in which the policy analysis movement has been conducted, and to what effect, in Canadian governments and, for the first time, in business associations, labour unions, universities, and other non-governmental organizations.

Drawing on insights from across Africa, this book investigates the discourses and practices that guide doctoral training today. Higher education is regarded as key for driving development and innovation, creating an informed knowledge base equipped to tackle local and global challenges. For too long external forces defined education in the continent, but now African countries are revitalising higher education, designing doctoral training to fit distinctly African needs and contexts. This book investigates the history, present, and future potential of doctoral training on international, regional, national and institutional levels. Bringing together expertise from both research and practice, the book analyses the frameworks and structures of the doctoral phase, and how institutions, supervisors, mentors and young scholars meet the challenges of training in real life. The book covers issues such as access to education, proactive recruitment, funding issues, practitioner expertise, enrolment and drop-out, across a range of countries including South Africa, Mozambique, Ethiopia, Nigeria, Benin, Ghana and Morocco. This book will be a rich resource for higher education administrators and policy makers, as well as researchers and academics with an

interest in higher education in Africa.

Now in its 50th edition, British Qualifications 2020 is the definitive one-volume guide to every recognized qualification on offer in the United Kingdom. With an equal focus on both academic and professional vocational studies, this indispensable guide has full details of all institutions and organizations involved in the provision of further and higher education, making it the essential reference source for careers advisers, students, and employers. It also contains a comprehensive and up-to-date description of the structure of further and higher education in the UK, including an explanation of the most recent education reforms, providing essential context for the qualifications listed. British Qualifications 2020 is compiled and checked annually to ensure the highest currency and accuracy of this valuable information. Containing details on the professional vocational qualifications available from over 350 professional institutions and accrediting bodies, informative entries for all UK academic universities and colleges, and a full description of the current structural and legislative framework of academic and vocational education, it is the complete reference for lifelong learning and continuing professional development in the UK.

The application of holistic optimization methods in the tourism, travel, and hospitality industry has improved customer service and business strategies within the field. By utilizing new technologies and optimization techniques, it is becoming easier to troubleshoot problematic areas within the travel industry. The Handbook of Research on Holistic Optimization Techniques in the Hospitality, Tourism, and Travel Industry features innovative technologies being utilized in the management of hotels and tourist attractions. Highlighting empirical research on the optimization of the travel and hospitality industry through the use of algorithms and information technology, this book is a critical reference source for managers, decision makers, executives, tourists, agents, researchers, economists, and hotel staff members. Developments in Vocational Education and Training

ECRM2015-Proceedings of the 14th European Conference on Research Methods 2015

For many organisations, training and development remain an aspiration rather than fundamental to their business, and the consequent investment is subject

to reductions or reallocations when times get tough. Yet increasing pressures from business globalisation mean that organisations are absolutely dependent on the skills of their workforce if they are to remain competitive. John Talbot's Training in Organisations: A Cost-Benefit Analysis, provides the basis for measuring and analysing the cost and value associated with training. It looks both at manual skills and management training analysis to explore the various approaches for costing training, controlling those costs and applying value analyses to the investment that is being made. Also included is a series of international comparisons across a variety of industry sizes and types which provide organisations with an important benchmark for their own spending. This proceedings volume presents new methods and applications in applied economics with special interest in advanced cross-section data estimation methodology. Featuring select contributions from the 2019 International Conference on Applied Economics (ICOAE 2019) held in Milan, Italy, this book explores areas such as applied macroeconomics, applied microeconomics, applied financial economics, applied international economics, applied agricultural economics, applied marketing and applied managerial economics. International Conference on Applied Economics (ICOAE) is an annual conference that started in 2008, designed to bring together economists from different fields of applied economic research, in order to share methods and ideas. Applied economics is a rapidly growing field of economics that combines economic theory with econometrics, to analyze economic problems of the real world, usually with economic policy interest. In addition, there is growing interest in the field of applied economics for cross-section data estimation methods, tests and techniques. This volume makes a contribution in the field of applied economic research by presenting the most current research. Featuring country specific studies, this book is of interest to academics, students, researchers, practitioners, and policy makers in applied economics, econometrics and economic policy.

First published in 1992. Routledge is an imprint of Taylor & Francis, an informa company.

Paul Ryan has brought together the writings of the most prominent British research into vocational preparation in Britain in comparison to the other advanced economies, primarily within the EEC. The book, originally published in 1991, documents various aspects of inadequacy in British practice at the time, concentrating upon intermediate skills, which are of crucial importance for economic performance. The introduction outlines the strengths and weaknesses of comparative research. Part 1 discusses the use which has been made of it by

policy makers in Britain and various aspects of comparative methods in practical comparisons, including an Anglo-Scottish one. Part 2 concerns vocational preparation in connection with productivity and produce markets, noting its importance for economic performance and its dependence upon companies' product choices. Part 3 contains studies of the organization of skills and work and the finance of training within the EEC as a whole. Part 4 comprises studies of training in relation to labour market structures, each of which indicates similar alternatives for training policy in Britain – alternatives whose relevance and political prospects can only be enhanced by the demise of Thatcher government deregulatory policies.

This third and final volume written in honour of Bernard Corry and Maurice Peston focuses on the application of economics to policy advice. It considers practical policy issues, including labour market policy and the problems of unemployment, methodology and econometric analysis, among others.

COVID-19 in the African Continent examines the development, achievements, and challenges that have resulted owing to COVID-19 pandemic and how these precarious socioeconomic situations are being managed in African countries.

Explaining the Miracle

[A] richly textured book, ambitious in scope, yet critical in nature. It deserves to be read by a wide audience.' - R. Imrie, *Environment & Planning This comprehensive but critical account of British local policy covers the initiatives of local and central government, corporately-funded agencies and the voluntary sector and the whole range of different political strategies these have embodied. It discusses how local economic policy attempts to deal with current economic, social and political conditions, including the particular problems of the British economy and considers the strengths and limitations of locally-based initiatives in an increasingly internationalised economy.*

*This volume focuses on the recent changes in education and training policy, mainly in the UK. The considerable developments of past years and the ways in which they have affected both education and training are examined. The contributors analyse the methods by which we educate our workforce, and look closely at the kind of training now offered to those in work. The chapters in this reader cover: * the role of the state * how economic factors influence education * national education and*

*training policy * the political factor. Other countries including Germany are looked at, and there is reflection on the ways in which the 'new' industry led qualifications such as NVQs have fared. There is careful analysis as to how much the political climate of the time influenced developments. There is thorough research to back up claims made throughout the book, and many practical examples are referred to. What emerges is an incisive examination of current trends in education and the workplace.*

Bringing together case studies from Kenya, Benin, Cameroon and the Philippines, this volume provides a multidisciplinary overview of the economics of natural resource management in Tropical regions, at household and village level. By comparing a wide array of climatic and economic conditions, it examines the effect of location and access to the market - as well as the importance of national policies - have on soil and water conservation. The book not only analyzes the benefits of soil and water conservation based on econometric studies, but also assesses the costs involved. In doing so it challenges commonly held assumptions about poorer community's ability to finance such measures.

Advances in Cross-Section Data Methods in Applied Economic Research

Methods and techniques adopted in teaching, training, learning, research, professional development, or capacity building are generally standardized across most traditional disciplines, particularly within developing countries. This is not the case, however, when it comes to the Islamic disciplines, and, in particular, in relation to the study of Islamic economics and finance, which is influenced by conventional standards and techniques. This is primarily due to the lack of availability of the requisite standards and mechanisms designed within the spirit of Maqsid al-Shari'ah. This book offers a unique resource and a comprehensive overview of the contemporary methods and smart techniques available for teaching, learning, and researching Islamic eco-finance, and it presents solutions to the challenges in implementing them. Further, the book gives deep insight into the most appropriate methodologies that could be employed empirically to explore, model, analyze, and evaluate Islamic finance theories and models, respectively. It also gives recommendations for improving learning, teaching, and research outcomes in Islamic eco-finance. The book also addresses how, in this advanced technological era, smart tools like artificial intelligence, machine learning, big data, Zoom, and the internet of things can be adapted to help equip students, researchers, and scholars with smart skills. The book will enable those studying Islamic economics and finance to grasp the appropriate tools for

research and learning. Additionally, the Islamic economics and finance sector is growing at a significant rate and therefore requires the upskilling and capacity building of its human resources; thus, the book will also be highly beneficial for practitioners involved in the industry.

The contributors in this volume examine the practical operations, at national and subnational levels, of the European Employment and Social Inclusion Strategies, which are the most important examples of the Open Method of Co-ordination as a new instrument of EU governance.
