Peterson's MBA Programs provides comprehensive profiles of up-to-date information on full-time, part-time, joint-degree, Executive MBA, and online graduate programs at more than 1,000 institutions, including degrees comparable or equivalent to an MBA. A wealth of facts and figures on admission and degree requirements, entrance difficulty, postgraduate hiring rates, financial aid, and contact information for approximately 4,000 graduate-level business programs are all available within Peterson's guide. It contains informative articles such as how an MBA can advance a career, how to choose the right program and pay for it, the advantages of getting your advanced business degree abroad, information on the latest hiring and salary trends, and application tips, including guidance on how to write a winning essay. Profiles of institutions are listed alphabetically within state, province, or country, with all the fast facts an applicant needs-plus two-page narrative descriptions which contain even more in-depth information on schools. Defines an approach to mental healthcare focused on achieving international equity in coverage, options and outcomes.

Now in its 50th edition, British Qualifications 2020 is the definitive one-volume guide to every recognized qualification on offer in the United Kingdom. With an equal focus on both academic and professional vocational studies, this indispensable guide has full details of all institutions and organizations involved in the provision of further and higher education, making it the essential reference source for careers advisers, students, and employers. It also contains a comprehensive and up-to-date description of the structure of further and higher education in the UK, including an explanation of the most recent education reforms, providing essential context for the qualifications listed. British Qualifications 2020 is compiled and checked annually to ensure the highest currency and accuracy of this valuable information. Containing details on the professional vocational qualifications available from over 350 professional institutions and accrediting bodies, informative entries for all UK academic universities and colleges, and a full description of the current structural and legislative framework of academic and vocational education, it is the complete reference for lifelong learning and continuing professional development in the UK.

Now in its 47th edition, British Qualifications 2017 is the definitive one-volume guide to every qualification on offer in the United Kingdom. With an equal focus on vocational studies, this essential guide has full details of all institutions and organizations involved in the provision of further and higher education and is an essential reference source for careers advisors, students and employers. It also includes a comprehensive and up-to-date description of the structure of further and higher education in the UK. The book includes information on awards provided by over 350 professional institutions and accrediting bodies, details of academic universities and colleges and a full description of the current framework of academic and vocational education. It is compiled and checked annually to ensure accuracy of information.

Healthcare Management

The Costs and Benefits of Psychiatric Care

Implications for Aging Policy and Practice

With the collective knowledge of expert contributors in the field, The International Handbook on Ageing and Public Policy explores the challenges arising from the ageing of populations across the globe. With an expansive look at the topic, this com

Aimed at healthcare managers and clinicians with management responsibilities, policy makers and healthcare academics, this book examines the evidence for relationships between organizational culture and performance, with practical tools to measure these factors.

The pharmaceutical industry faces a well-documented perfect storm: on the one hand, the patent cliff; the lack of new blockbuster and, on the other, economic pressure on pricing from markets with growing expectations and shrinking budgets. In the face of such pressure, traditional health economics models no longer seem appropriate and yet what do we have to replace them? The growing focus on 'value' and 'cost effectiveness' are evidence of new emerging thinking although, even here, with the shift from medicine as cure to medicine as palliative, as a landscape is complex and challenging. The Future of Health Economics offers a window into some of the most influential emerging issues in pharmacoeconomics: issues such as risk-sharing and alternative pricing models or the potential impact of radical new approaches such as personalized medicine: as well as exploring the changing role of government and regulators. Ulf Staginnus and Olivier Etthen, themselves two of the most well-regarded practitioners in this field, have brought together some leading-edge thinkers from industry and academia around the world with the raw material for their future scenarios.

This book contains a collection of vignettes showcasing the latest research into global health economics conducted by leading experts in the field from the Centre for Health Economics (CHE) at the University of York and other partner research institutions. Each chapter focuses upon an important topic in global health economics and a number of separate research projects. The discussion delves into health care policy evaluation; economic evaluation; economic and other analytic methods; health equity and universal health coverage; consideration of cost-effectiveness; and others. Case study examples from a variety of low- and middle-income countries (LMIC) settings are also showcased in the final part of this volume.The research presented seeks to contribute toward increasing understanding on how health policy can be enhanced to improve the welfare of LMIC populations. It is strongly recommended for public health policymakers and analysts in low- and middle-income country settings and those affiliated to international health organizations and donor organizations.

International Handbook on Ageing and Public Policy

Microeconomics

Future Public Health

Concepts, Research, Policy

No Longer the East Asian Exception?

Strengthening Health-economics Capability in Africa

The main objective of this work is to provide a book with high quality content that becomes a reference and support for graduate course (Mental Health, Public Health and Epidemiology) and for research in the domain of health economics applied to mental health. Also this book might be useful for policymakers on formulating mental health policies. Key messages of this book are based on: a) mental illness represent a huge cost for society and for health care; b) health economics applied to mental health could help in the optimization of resource allocation for mental health care and for better decision making in terms of balancing costs and benefits; c) interventions and treatment should be also chosen in general medical practice and in public decision-policy according to cost-effectiveness, burden of disease and equity principles; d) quality of care is related with better outcomes, higher quality of life for clients, and with lower costs for society and health system (best value for money); e) it is possible to decrease the burden of mental disorders with cost-effective treatments. The book is divided in four main topics: 1. Introduction to Health Economics applied to Mental Health – this section is an overview of basic principles, concepts and methods used in Economics and Health Economics to enable students to make critical appraisal of Health Economics texts and also to design research studies in this topic. 2. Health Economics applied to the evaluation of quality and costs of Mental Health Services – this section presents results of Brazilian studies on the costs of mental health care (hospital, outpatient care, residential care, informal care), methods on the measurement of costs and it discusses issues related with public policies decisions and quality of mental health car in the low and middle income countries context. There is also an overview of quality indicators of mental health care and instruments to evaluate mental health services and costs.3. Health Economics applied to evaluate treatment of mental disorders - This section presents a review of cost-effectiveness of pharmacological treatments and other interventions applied for treating the most burdensome mental disorders such as depressive and anxiety disorders, bipolar disorders, psychosis, alcohol and drug disorders, dementia, and hyper attention deficit disorders. 4. Health Economics, burden and indirect costs of mental disorders - This section highlights the social and economic burden caused by mental illness under societal perspective focusing on stigma, unemployment, indirect costs in the workplace (absenteeism and presenteeism), the relationship between poverty and mental disorders, global health and social determinants of mental health and on the costs of mental disorders (depression, anxiety, psychosis, alcohol and drug disorders). We present some instruments to measure indirect costs of mental disorders.

This Handbook provides a thorough discussion of the most recent wave of technological (and organisational) innovations, frequently called "smart" and based on the digitalisation of information. The acronym stands for "Self-Monitoring, Analysis and Reporting Technology". This new wave is one in a row of waves that have shaken up and transformed the economy, society and culture since the first Industrial Revolution and have left a huge impact on how we live, think, communicate and work: they have deeply affected the socioeconomic metabolism from within and have created a new paradigm. The Handbook analyses the origins of the current wave, its roots in earlier ones and its path-dependent nature; its current forms and actual manifestations; its multilayered impact on economy and society; and it puts forward some guesstimates regarding the probable directions of its further development. In short, the Handbook studies the past, the present and the future of smart technologies and digitalisation. This cutting-edge reference will appeal to a broad audience, including but not limited to, researchers from various disciplines with a focus on technological innovation and their impact on the socioeconomic system; students across different fields but especially from economics, social sciences and law studying questions related to radical technological change and its consequences, as well as professionals around the globe interested in the debate of smart technologies and socioeconomic transformation, from a multi- and interdisciplinary perspective.

In this book, leading social researchers from Australia, India, Italy, New Zealand, South Africa, Sweden, the UK and USA discuss the impact of the novel coronavirus pandemic in their respective countries. They explore socio-cultural, health, economic and educational aspects of people's lives, and governments' policies and programmes. Their analyses show how coronavirus infects indiscriminately and impacts discriminately, particularly the disadvantaged and marginalized groups. The pandemic exposes hidden health inequalities and calls for structural changes. It significantly contributes to lessons learned from the pandemic and the understanding of implications for community and social development. The book is a useful resource for further research and action, and policies and programmes to fight the pandemic and support people and communities with care and compassion.

A unique, in-depth discussion of the uses and conduct of cost-effectiveness analyses (CEAs) as decision-making aids in the health and medical fields, this volume is the product of over two years of comprehensive research and deliberation by a multi-disciplinary panel of economists, ethicists, psychometricians, and clinicians. Exploring cost-effectiveness in the context of societal decision-making for resource allocation purposes, this volume proposes that analysts include a "reference-case" analysis in all CEAs designed to inform resource allocation and puts forth the most explicit set of guidelines (together with their rationale) ever defined on the conduct of CEAs. Important theoretical and practical issues encountered in measuring costs and effectiveness, evaluating outcomes, discounting, and dealing with uncertainty are examined in separate chapters. Additional chapters on framing and reporting of CEAs elucidate the purpose of the analysis and the effective communication of its findings. Cost-Effectiveness in Health and Medicine differs from the available literature in several key aspects. Most importantly, it represents a consensus on standard methods—a feature integral to a CEA, whose principal goal is to permit comparisons of the costs and health outcomes of alternative ways of improving health. The detailed level at which the discussion is offered is another major distinction of this book, since guidelines in journal literature and in CEA-related books tend to be rather general—to the extent that the analyst is left with little guidance on specific matters. The focused overview of the theoretical background underlying areas of controversy and of methodological alternatives, and, finally, the accessible writing style make this volume a top choice on the reading lists of analysts in medicine and public health who wish to improve practice and comparability of CEAs. The book will also appeal to decision-makers in government, managed care, and industry who wish to consider the uses and limitations of CEAs.

Governance of Health Care Innovation. Excursions into Politics, Science and Citizenship.

The Future of Health Economics

A Complete Guide to Professional, Vocational and Academic Qualifications in the United Kingdom

International Public Health: Diseases, Programs, Systems and Policies

The field of professional, academic and vocational qualifications is ever-changing. The new edition of this practical guide provides thorough information on all developments in these areas in the UK. Fully indexed, it includes details on all university awards and over 200 career fields, their professional and accrediting bodies, levels of membership and qualifications. British Qualifications is a unique resource for human resource managers and university admissions officers to verify the qualifications of potential employees and students.

Series Editor: Michael Rigby This completely up-to-date resource equips readers with practical tools to understand and apply health economic methods. It introduces the key economic tools and the data available that can assist an economic decision and covers a range of areas from primary care and national data to global indicators of health. The information presented is applicable to all economic issues - at individual practice or nationwide policy level. Harnessing Information for Health Economics Analysis is a vital handbook for all clinicians, managers, and policy makers and shapers who make decisions about planning, commissioning and delivering healthcare. It will also be of great value to health economists, and postgraduate students in health economics and related disciplines.

This Handbook features the best teaching practices in the Health Economics (HE) field over the past decade. HE is still considered a new field in the world of economics. The teaching materials are designed for and suitable to HE specializations housed in economics departments, schools of public health, health professions, health sciences, nursing, pharmacy, business, or public/health administration.

The COVID-19 pandemic has impacted the lives of people throughout the world, either directly, due to exposure to the virus, or indirectly, due to measures taken to mitigate the virus' effects. Older adults have been particularly hard hit, dying in disproportionately higher numbers, especially in long-term care facilities. Local, regional, and national government actions taken to mitigate the spread of COVID-19 have thus served, in part, to shield older adults from the virus, though not without adverse side effects, including increased social isolation, enhanced economic risk, revealed ageism, delayed medical treatment, and challenges getting basic needs met. This book explores the myriad ways in which the COVID-19 pandemic has affected older adults and their families, caregivers, and communities. It proposes policies and strategies for protecting and improving the lives of older people during the pandemic. It draws lessons for aging policy and practice more generally, given underlying challenges brought to the fore by government, provider, community, and individual responses to the pandemic. This book was originally published as a special issue of the Journal of Aging & Social Policy.

Strengthening Health-economics Capability in AfricaSummary and Outcomes of a Regional Consultation of Experts and Policy-makersWorld Health Organization

Thoroughly examine how microeconomic principles apply to health care delivery and its policies with HEALTH ECONOMICS AND POLICY, 7E. Readers explore the changing nature of health care, the social and political sides of issues, and the uncertainty surrounding the future of health care delivery and finance as the U.S. transitions from Obamacare to Trumpcare. Readers also learn to analyze public policy from an economic perspective. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

This book provides the reader with a comprehensive set of instructions and examples of how to perform a cost-benefit analysis (CBA) of a health intervention. Developed out of a course run by Jordan Louviere at the University of Technology, Sydney, entitled An Introduction to Stated Preference Discrete Choice Modelling it has a particular focus on the use of stated preference survey methods to identify consumer preference data, as well as the use of recent developments in cost-effectiveness analysis within a CBA framework. In doing so, the most up to date methodologies for CBA are compiled in a comprehensive manner with the aim of advancing the methodology of CBA in healthcare. ABOUT THE SERIES Series editors Alastair Gray and Andrew Briggs Economic evaluation of health intervention is a growing specialist field, and this series of practical handbooks tackles, in depth, topics superficially addressed in more general economics books. Each volume includes illustrative material, case histories and worked examples to encourage the reader to apply the methods discussed, with supporting material provided online. The series is aimed at health economists in academia, the pharmaceutical industry and the health sector, those on advanced health economics courses, and health researchers in associated fields.

This publication examines how public spending on health care can be made more efficient and equitable in developing countries, focusing on strategic purchasing and contracting of services from non-governmental providers. It is divided into six sections under the headings of: the conceptual framework; how to make strategic purchasing pro-poor; purchasing health services; purchasing inputs; supply, demand and markets; legal and regulatory issues.

Applied Methods of Cost-effectiveness Analysis in Healthcare

World Scientific Handbook Of Global Health Economics And Public Policy (A 3-volume Set)

International Food Law and Policy

An Economic and Social Perspective

This publication provides an overview of health economics initiatives in sub-Saharan Africa and outlines a strategy for promoting further health economics capacity in the region. It is the result of a process initiated by the Special Programme for Research and Training in Tropical Diseases (TDR) capacity building programme of work, including a Consultative Workshop in 2006, and completed with support from the Swedish International Development Cooperation Agency (SIDA). The report was drafted as a paper providing background information and ideas on health economics capacity within the sub-Saharan African (SSA) region to stimulate discussion at the consultative workshop held in April 2006 to consider ways of promoting health-economics capacity within the region. Prior to publication, it was circulated widely among health economists working in Africa - their inputs ensure that it reflects the widest possible range of views.

June 29-30, 2017 Madrid, Spain Key Topics : Health Economics, Health Economics and Policy, Health Economics and Health Care Services, Health Economics and Pharmaceutical Manufacturers, Health Economics and Health Insurance, Health Economics and Outcome Research, Health Economics and Econometrics, Health Economics and Health Statistics, Health Economics Modelling, Health Economics and Behavioural economics, Health Economics and Public health economics, Health Economics and Health care Markets, Health Economics and Financing, Health Economics and International Economics, Health care services and insurance, Economics of Health innovation, Hospital Services, Outcome Research and Epidemiology, Economic Epidemiology, Health Economics and Macroeconomics.

In this volume, a leading group of scholars pose the question, has the Philippine economy rejoined the dynamic East Asian mainstream and, if so, what set of policies and priorities are required to maintain the strong economic momentum of recent years? Successive chapters address issues related to growth and poverty, infrastructure and urbanization, education, health, the environment, energy, development finance, and governance and institutions. The book has been written with a broad audience in mind. First and foremost it is for readers in, and interested in, this fascinating and important country with a population that now exceeds a hundred million. Second, it will appeal to those in the broader development community with an interest in the analytical and policy challenges that democratic, middle-income countries face as they struggle to lift their citizens out of poverty and to achieve broad-based and environmentally sustainable growth.

Now in its 44th edition, British Qualifications is the definitive one-volume guide to every qualification on offer in the United Kingdom. With full details of all institutions and organizations involved in the provision of further and higher education, this publication is an essential reference source for careers advisors, students and employers. It also includes a comprehensive and up-to-date description of the structure of further and higher education in the UK. The book includes information on awards provided by over 350 professional institutions and accrediting bodies, details of academic universities and colleges and a full description of the current framework of academic and vocational education. It is compiled and checked annually to ensure accuracy of information.

COVID-19 Pandemic

Professional, Vocational and Academic Qualifications in the UK

Europe and the Mediterranean Economy

International Farm Animal, Wildlife and Food Safety Law

COVID-19 is the most significant global crisis of any of our lifetimes. The numbers have been stupefying, whether of infection and mortality, the scale of public health measures, or the economic consequences of shutdown. Coronavirus Politics identifies key threads in the global comparative discussion that continue to shed light on COVID-19 and shape debates about what it means for scholarship in health and comparative politics. Editors Scott L. Greer, Elizabeth J. King, Elize Massard da Fonseca, and André Peralta-Santos bring together over 30 authors versed in politics and the health issues in order to understand the health policy decisions, the public health interventions, the social policy decisions, their interactions, and the reasons. The book 's coverage is global, with a wide range of key and exemplary countries, and contains a mixture of comparative, thematic, and templated country studies. All go beyond reporting and monitoring to develop explanations that draw on the authors' expertise while engaging in structured conversations across the book.

International Food Law and Policy is the first interdisciplinary piece of academic literature of its kind with a comprehensive, reader-friendly approach to teaching the major aspects of food regulation, law, policy, food safety and environmental sustainability in a global context. The sections are grouped by continents and focus on a range of cross-disciplinary subjects, such as public health, international food trade, the right to food, intellectual property and global regulatory aspects of food production. With its systematic approach, this book will be a valuable resource both for professionals working in food regulation and anyone interested in the subject. It provides a solid foundation for courses and master 's programs in environmental management, food law, policy and regulation, and sustainable development around the world.

Situating public health within its social, environmental and political context, this book looks to the future through a realistic analysis of policy frameworks, effective interventions and robust measurement and evaluation. Using a multidisciplinary perspective it creates a compelling vision for public health policy.

The new edition of a textbook that combines economic concepts with empirical evidence, updated with material on the Affordable Care Act and other developments. This book introduces students to the growing research field of health economics. Rather than offer details about health systems without providing a theoretical context, Health Economics combines economic concepts with empirical evidence to enhance readers' economic understanding of how health care institutions and markets function. The theoretical and empirical approaches draw heavily on the general field of applied microeconomics, but the text moves from the individual and firm level to the market level to a macroeconomic view of the role of health and health care within the economy as a whole. The book takes a global perspective, with description and analysis of institutional features of health sectors in countries around the world. This second edition has been updated to include material on the U.S. Patient Protection and Affordable Care Act, material on the expansion of health insurance in Massachusetts, and an evaluation of Oregon's Medicaid expansion via lottery. The discussion of health care and health insurance in China has been substantially revised to reflect widespread changes there. Tables and figures have been updated with newly available data. Also new to this edition is a discussion of the health economics literature published between 2010 and 2015. The text includes readings, extensive references, review and discussion questions, and exercises. A student solutions manual offers solutions to selected exercises. Downloadable supplementary material is available for instructors.

The International Handbook of Gender and Poverty

Economic Analysis in Healthcare

British Qualifications 2014

Applied Methods of Cost-Benefit Analysis in Health Care

The Passionate Economist

British Qualifications

... possibly the most comprehensive contribution to a detailed and thorough analysis of gendered dimensions of international poverty contexts, causes, and consequences ever brought together into one volume. Gender and Development I recommend this book to be a staple of reference libraries. British Politics and Policy With international attention focused on halving poverty by 2015, the appearance of The International Handbook of Gender and Poverty is both timely and essential. Sylvia Chant is to be congratulated for producing a state-of-the-art compendium of everything you need to know about the often hidden, gendered, dimensions of poverty. Edited and written by leading scholars and policy advisers, the Handbook comprehensively covers the key themes that are vital to understanding poverty as a gendered process, combining policy lessons with theoretical insight. Richly illustrated with examples from across the world, this book will not only be welcomed by all those dedicated to the study of poverty, but, by casting new light on its causes, will also help to develop appropriate measures to tackle it. Professor Maxine Molyneux, Institute for the Study of the Americas, University of London, UK While each of the articles in this impressive collection makes an original contribution to the conceptual, empirical and policy analysis of gender and poverty, together they provide a comprehensive overview of the field and an essential resource for all sections of the development community. Professor Sylvia Chant is to be congratulated for bringing together some of the leading thinkers in the field from across the world. This is not only an unprecedented feat of international co-operation but feminist collaboration at its best. Professor Naila Kabeer, Institute of Development Studies, University of Sussex, UK These diverse, thoughtful essays go far beyond a mere summary of international scholarship. They outline a fascinating and provocative agenda for future policy-relevant research. This book will help redefine and revitalise the field of gender and development. Professor Nancy Folbre, Department of Economics, University of Massachusetts, Amherst, USA In the interests of contextualising (and nuancing) the multiple interrelations between gender and poverty, Sylvia Chant has gathered writings on diverse aspects of the subject from a range of disciplinary and professional perspectives, achieving extensive thematic as well as geographical coverage. This benchmark volume presents women's and men's experiences of gendered poverty with respect to a vast spectrum of intersecting issues including local to global economic transformations, family, age, race, migration, assets, paid and unpaid work, health, sexuality, human rights, and conflict and violence. The Handbook also provides up-to-the-minute reflections on how to theorise, measure and represent the connections between gender and poverty, and to contemplate how gendered poverty is affected and potentially redressed by policy and grassroots interventions. An unprecedented and ambitious blend of conceptual, methodological, empirical and practical offerings from a host of established as well as upcoming scholars and professionals from across the globe lends the volume a distinctive and critical edge. Notwithstanding the broad scope of The International Handbook of Gender and Poverty, one theme in common to most of its 100-plus chapters is the need to en-gender analysis and initiatives to combat poverty and inequality at local, national and international levels. As such, the volume will inspire its readers not only to reflect deeply on poverty and gender injustice, but also to consider what to do about it. This book will be essential reading for all with academic, professional or personal interests in gender, poverty, inequality, development, and social, political and economic change in the contemporary world.

This volume is an inspiring and breakthrough piece of academic scholarship and the first of its kind featuring a comprehensive reader-friendly approach to teach the intricacies of the various aspects of international farm animal, wildlife conservation, food safety and environmental protection law. The selected focus areas are grouped in sections, such as agrobiodiversity, fishing and aquaculture, pollinators and pesticides, soil management, industrial animal production and transportation, and international food trade. Farm animal welfare, environmental protection, biodiversity conservation, and food safety are the core of the selected chapters. Every chapter provides real-world examples to make the complex field easy to understand. With its systematic approach, this book is devoted to anyone interested in the subject, becomes a valuable resource for professionals working in food regulation, and provides a solid foundation for courses and master's programs in animal law, environmental policy, food and agriculture law, and regulation of these subjects around the world. Through its emphasis on sustainable food production, this work offers a cutting-edge selection of evolving topics at the heart of the pertinent discourse. As one of its highlights, this books also provides "Tools for Change," a unique compilation and analysis of laws from the major farm animal product trading nations. With these tools, practitioners, advocates, policy makers and other state-holders are equipped with information to start work toward improving farm animal welfare, wildlife conservation, and food safety through the use of law and policy.

Now in its 46th edition, British Qualifications is the definitive one-volume guide to every qualification on offer in the United Kingdom. With an equal focus on vocational studies, this essential guide has full details of all institutions and organizations involved in the provision of further and higher education and is an essential reference source for careers advisors, students and employers. It also includes a comprehensive and up-to-date description of the structure of further and higher education in the UK. The book includes information on awards provided by over 350 professional institutions and accrediting bodies, details of academic universities and colleges and a full description of the current framework of academic and vocational education. It is compiled and checked annually to ensure accuracy of information.

Brian Abel-Smith was one of the most influential expert advisers of the 20th century in shaping social welfare. He was a modern-day Thomas Paine, driven by a strong socialist mission to improve the lives of the poorest. This valuable and accessible book is the first biography of Abel-Smith. It takes a historical perspective to analyse the development of health and social welfare systems since the 1950s, exposing the critical impact of long-running debates on poverty and state responsibility, especially in Britain. This book also provides the first comparative study of how developing countries sought better health and social welfare, enabled by the World Health Organization and other agencies for whom Abel-Smith regularly worked. This book offers an engaging and useful study for students and researchers in health and social policy, history, politics and economics and interested general readers. It will also be essential reading for professionals working in those government ministries and institutions that Brian Abel-Smith helped to shape. LSE Pioneers in Social Policy Brian Abel-Smith, Richard Titmuss and Peter Townsend, all based at the London School of Economics and Political Science, made major contributions to the development of policies on the elderly, health care, law, poverty and welfare in the 20th century. This series of biographies tells the stories of these outstanding individuals: their backgrounds, ideas and work.

Older Adults and COVID-19

Summary and Outcomes of a Regional Consultation of Experts and Policy-makers

Impact on and Implications for Community and Social Development

Financial protection against the cost of illness and inclusion of vulnerable groups will require better mobilization and use of private means. Private voluntary health insurance already plays an important role in mobilizing additional resources to the health sector and protecting against the catastrophic cost of illness in some countries. This review explores the context under which private voluntary health insurance could contribute to an improvement in the sustainability of the health sector and financial protection in other countries. Specially selected from The New Palgrave Dictionary of Economics 2nd edition, each article within this compendium covers the fundamental themes within the discipline and is written by a leading practitioner in the field. A handy reference tool. This book provides the reader with a comprehensive set of instructions and examples of how to perform an economic evaluation of a health intervention, focusing solely on cost-effectiveness analysis in healthcare.

Economic Analysis in Health Care, Second Edition is intended as a core textbook for advanced undergraduate and postgraduate students of health economics. The authors provide comprehensive coverage of the field of economics in health care and the evaluation of health care technologies. This new edition has been fully updated with up-to-date case studies from the UK, Europe and the Rest of the World. It includes a new chapter on health care labour markets and contains new material integrated throughout the text on the economics of public health. Adopts an international perspective towards topics in health economics Creates a useful balance of theoretical treatment and practical application throughout the book Focuses on both market-related and economic evaluation aspects of health economics.

MBA Programs 2010

Handbook on Teaching Health Economics

Proceedings of Health Economics Policy & Outcomes Research 2017

In this text for graduate students in various disciplines who are studying international public health, the author focuses on conditions in low- and middle-income countries, occasionally making reference to high-income countries. He suggests approaches for fostering public health, and discusses future challenges for health promotion and disease prevention around the world. The text can also be used as a reference by those working in government agencies, international health and development agencies, and NGOs.

A comprehensive, research-based introduction to healthcare management, covering healthcare systems, services, organisations and management.

This Handbook covers major topics in global health economics and public policy and provides a timely, systematic review of the field. Edited by Richard M Scheffler, Distinguished Professor of Health Economics and Public Policy and Director of the Global Center for Health Economics and Policy Research at the University of California, Berkeley, the Handbook features academics and practitioners from more than a dozen countries. Contributors are from the London School of Economics and Political Science, Pompeu Fabra University in Barcelona, University of York, University of Oslo, London School of Hygiene and Tropical Medicine, University of California - Berkeley, Stanford University, Johns Hopkins University, University of Toronto, University of Oxford, Harvard Medical School, OECD, the World Health Organization and the World Bank, many of whom have also acted as economic and policy advisors to government and non-governmental organizations across the world.

Experts in these areas who provide critical analyses and relevant data for further exploration and research include: Thomas E Getzen, Executive Director of the International Health Economics Association (IHEA); Douglas E Hough, Associate Scientist and Associate Director of the Master in Healthcare Management programme at the Bloomberg School of Public Health of John Hopkins University; Guillem López-Casasnovas, former President of IHEA and member of the Advisory Council of the Spanish Health and Social Welfare Ministry and of the Advisory Council of the Catalan Health Ministry since 1984; Alistair McGuire, Professor of Health Economics at the London School of Economics and Political and advisor to a number of governments and governmental bodies across Europe; Tor Iversen, Research Director at the Health Economics Research Programme at the University of Oslo and former member of the IHEA Arrow Award Committee 2007-2011; William H Dow, Professor and Associate Dean for Research at University of California ,Berkeley and former Senior Economist for the Council of Economic Advisors (White House); Audrey Laporte, the Director of the Canadian Centre for Health Economics; Alexander S Preker, President and CEO of Health Investment & Financing Corporation; Ayda Yurekli, who initiated and developed the World Health Organization TaXSiM simulation model that has been used by many Ministries of Finance around the world for the development of tax policies; Marko Vujicic, Managing Vice President of the Health Policy Resources Center at the American Dental Association; Mark Sculpher, Director of the Programme on Economic Evaluation and Health Technology Assessment at the University of York and former President of the International Society of Pharmacoeconomics and Outcomes Research (ISPOR) (2011-2012); and Peter Berman, who has had almost 40 years of experience in global health and was formerly a Lead Health Economist at the World Bank. The Handbook spans across three volumes. The chapters deal with key global issues in health economics, are evidence-based, and offer innovative policy alternatives and solutions. The Handbook's approach toward global health economics and public policy will make it a useful resource for health economists, policymakers, private sector companies, NGOs, government decision-makers and those who manage healthcare systems.
