From music to gaming, information gathering to eLearning; eCommerce to eGovernment, Lorenzo Cantoni and Stefano Tardini's absorbing introduction considers the internet as a communication technology; the opportunities it affords us, the limitations it imposes and the functions it allows. Internet explores: the political economy of the internet hypertext computer mediated communication websites as communication conceptualizing users of the internet internet communities and practices. Perfect for students studying this modern phenomenon, and a veritable e-feast for all cyber junkies.

A history of developments in the uses of radioactivity and ionising radiation in the last century and the measures used to protect people from harmful effects. The sources of radiation exposure covered include medical uses, nuclear power generation and natural ones, such as that from radon. The book traces the evolution of our understanding of the effects of radiation on the human body, particularly those leading to cancer and hereditary diseases. One of the key challenges for practitioners was constructing manageable frameworks for evaluating these effects so that there could be effective control and regulation. The book emphasises the international nature of these efforts and the need to change approaches as more data became available after the Second World War. For the second edition the opportunity has been taken to revise the citation system and make some correction but the major change is the addition of two new Chapters: one on nuclear criticality safety and the other on nuclear safety assessment. This new edition has been updated to take account of legislative and other developments including the Age Discrimination 2006 Regulations, the Corporate Manslaughter and Corporate Homicide Act 2007, the changes to dispute resolution procedures, and the impact of the Work and Families Act 2006.

This book examines the implementation of science, technology and innovation (STI) policy in eight Latin American countries and the different paths these policies have taken. It provides empirical evidence to examine the extent to which STI policies are contributing to the development of the region, as well as to the solution of market failures and the stimulus of the region ' s innovation systems. Since the pioneering work of Solow (1957), it has been recognized that innovation is critical for economic growth both in developed and in less-developed countries. Unfortunately Latin America lags behind world trends, and although over the last 20 years the region has established a more stable and certain macroeconomic regime, it is also clear that these changes have not been enough to trigger a process of innovation and productivity to catch-up. Against this rather grim scenario there is some optimism emerging throughout the region. After many years of inaction the region has begun to invest in science, technology and engineering once again. Furthermore, after many changes in innovation policy frameworks, there is now an emerging consensus on the need for a solution to coordination failures that hinder the interaction between supply and demand. Offering an informative and analytic insight into STI policymaking within Latin America, this book can be used by students, researchers and practitioners who are interested in the design and implementation of innovation policies. This book also intends to encourage discussion and collaboration amongst current policy makers within the region.

A case study that profiles the best practices for sustainable development, indigenous human rights, and conflict resolution, providing original insights into Latin American environmental and development politics.

The conservation of cultural artefacts, such as buildings, works of art and books presents a fascinating, rich and diverse range of scientific challenges, and the UK has a high reputation in the field, based in large part on past achievements. However, the Committee's report finds that our national standing is now under threat as the sector is fragmented and under-valued, and the DCMS has completely failed to grasp the threat to heritage science, and thus to conservation. The Department's emphasis on widening public access to our cultural heritage is a laudable objective, but this policy needs to be balanced by effective conservation, based on sound science, if we are to leave a sustainable cultural heritage for the benefit of future generations. The Committee also calls on the heritage sector to come together in developing a broad-based national strategy for heritage science, to be championed at departmental level by the newly appointed DCMS Chief Scientific Adviser, and co-ordinated administratively by English Heritage, drawing on input from all bodies active in the sector including those in Scotland, Wales and Northern Ireland.

For many Canadians, the small province of New Brunswick on Canada's scenic east coast is "a nice place to visit but no place to live," plagued for generations by outmigration and economic stagnation. In The Fiddlehead Moment Tony Tremblay challenges this potent stereotype by showcasing the work of a group of literary modernists who set out to change the meaning of New Brunswick in the national lexicon. Alfred Bailey, Desmond Pacey, Fred Cogswell, and a formidable group of local poets and cultural workers - collectively, New Brunswick's Fiddlehead School - sought to restore New Brunswick's literary reputation by adapting avant-garde modernist practices to the contours of the province, opening it to the contemporary world while also encouraging writers to make it their subject. The result was a non-urban form of modernism that was as responsive to technical innovation as to the human geographies of New Brunswick. By placing New Brunswick writers and critics at the forefront of Canadian literature in the midcentury modernist project, Tremblay adds an important new chapter to our understanding of Canadian modernism. The Fiddlehead Moment is the first critical examination of this group's considerable influence. Whether through Bailey's ethnomethodology, Pacey's critical ordering, or Cogswell's editorial eclecticism in the Fiddlehead magazine and Fiddlehead Poetry Books, authors in New Brunswick, Tremblay argues, had a profound impact on writing in Canada. This 2016 OECD Economic Survey of Costa Rica examines recent economic developments, policies and prospects. The special chapters cover: Inclusive growth and Productivity.

This volume comprehensively captures trends in productivity and its determinants in the post-reform period for India manufacturing. It provides an up-to-date survey of different methods employed in measuring productivity and their application across organized and unorganized sectors, including food, beverages, furniture, gems, chemicals, petroleum and rubber and minerals, paper products, publishing, textiles, etc. The essays examine the uneven impact of economic reforms on the performance of the manufacturing sector. This will be especially useful to students and scholars of economics, business management, policymakers and governmental agencies, particularly those interested in Indian economy and manufacturing. The PISA 2003 Technical Report describes the complex methodology underlying PISA 2003, along with additional features.

Education is of relevance to everyone but it involves a specialized vocabulary and terminology which may be opaque or unfamiliar to those new to the field. This UK-focused Dictionary of Education provides clear and concise definitions for over 1,100 terms, from A* to zero tolerance, that anyone studying education or working in the field is likely to encounter. Coverage includes all sectors of education: pre-school, primary, secondary, further and higher education, special needs, adult and continuing education, and work-based learning. It also includes major legislation, key figures and organizations, and national curriculum and assessment terminology. This second edition covers all the contemporary reforms being introduced to revise the school examinations system and to reform the process of initial teacher training in England and Wales.

Coverage of the vocabulary of education has also been increased, and longer and more detailed entries are included for terms relating to disability and inclusive practice, such as autistic spectrum disorder, attention deficit, and dyslexia, and to professional development, such as mentor. Entries regarding projects and initiatives that are now obsolete have been deleted. The dictionary features entry-level web links, accessible and kept up to date via the Dictionary of Education companion website. Detailed appendices include a timeline summary of landmark educational legislation since 1945 and a glossary of acronyms. In addition, there is a useful, fully cross-referenced section of comparative terms used in the US, Canada, Australia, and South Africa. This concise yet authoritative dictionary is essential for all students of education, teachers, and lecturers on development programmes, and it is strongly recommended for governors, classroom assistants, and parents.

OECD Economic Surveys: Costa Rica 2016 Economic Assessment

This volume includes a selection of papers dedicated to the problems of the contemporary international relations and foreign policies of the African states. Most of these papers were presented at the panels, held within the framework of the 13th International Conference of Africanists "Society and Politics in Africa: Traditional, Transitional and New" (Moscow, Russia, May 27-30, 2014). The book contains many articles devoted to the Western countries' policies in Africa. On the background of the ongoing competition between Washington and Beijing, the US Administration has recently increased the amount of attention it pays to the continent. The European Union is also actively developing its strategic partnership with Africa. The authors thoroughly analyse the ongoing cooperation between African states and China, a great "emerging donor" and investor. They particularly address the question about possible implications of China's African policy for the countries of the continent. Major attention is given to Sudan and South Sudan. One of the urgent problems addressed is the situation with African IDPs and refugees, their life conditions in camps and the measures for their transition to normal life.

If we believe that the small, open economies of Nordic Europe are paragons of good governance, why are they so prone to economic crisis? In *Good Governance Gone Bad*, Darius Ornston provides evidence that adapting flexibly to rapid, technological change and shifting patterns of economic competition may be a great virtue, but it does not prevent countries from making strikingly poor policy choices and suffering devastating results. Home to three of the "big five" financial crises in the twentieth century, Nordic Europe in the new millennium has witnessed a housing bubble in Denmark, the collapse of the Finnish ICT industry, and the Icelandic financial crisis. Ornston argues that the reason for these two seemingly contradictory phenomena is one and the same. The dense, cohesive relationships that enable these countries to respond to crisis with radical reform render them vulnerable to policy overshooting and overinvestment. *Good Governance Gone Bad* tests this argument by examining the rise and decline of heavy industry in postwar Sweden, the emergence and disruption of the Finnish ICT industry, and Iceland's impressive but short-lived reign as a financial powerhouse as well as ten similar and contrasting cases across Europe and North America. Ornston demonstrates how small and large states alike can learn from the Nordic experience, providing a valuable corrective to uncritical praise for the "Nordic model." Although ambivalence characterizes the stance of scholars toward the desirability of close opinion-policy linkages in general, it is especially evident with regard to immigration. The controversy and disagreement about whether public opinion should drive immigration policy are among the factors making

immigration one of the most difficult political debates across the West. Leading international experts and aspiring researchers from the fields of political science and sociology use a range of case studies from North America, Europe and Australia to guide the reader through the complexities of this debate offering an unprecedented comparative examination of public opinion and immigration. part one discusses the socio-economic and contextual determinants of immigration attitudes across multiple nations part two explores how the economy can affect public opinion part three presents different perspectives on the issue of causality - do attitudes about immigration drive politics, or do politics drive attitudes? part four investigates how several types of framing are critical to understanding public opinion and how a wide range of political factors can mould public opinion, and often in ways that work against immigration and immigrants part five examines the views of the largest immigrant group in the U.S. - Latinos - as well as how opinions are shaped by contact with and opinions about immigrants in the U.S. and Canada. An essential read to all who wish to understand the nature of immigration research from a theoretical as well as practical point of view.

This book sheds light on the mega-city region development in China as a new form of urbanization which plays a crucial role in the economy of the country. It examines the challenges faced by the mega-city regions and opens up avenues for debates and further research. Economic growth has led to an unprecedented growth in the population and economic development of China. A large portion of this increased urban population corresponding economic growth has been concentrated in the mega-city regions, such as Beijing-Tianjin-Hebei (BTH), Yangtze River Delta (YRD) and Pearl River Delta (PRD). These three mega-city regions have less land but more people and thus higher economy, resulting in various issues and challenges faced by these regions. These challenges pertain to the socio-economic development, transport, environment, governance and urban strategy, which this book explores through case studies of Guangdong-Hong Kong-Macao Greater Bay Area, Beijing-Tianjin-Hebei and Wuhan. The book also explains and analyses the economy, migration processes, transport development, environmental conditions and governance of the mega-city regions in China. With an overview of China's rapid urbanisation and the consequent economic growth, this book provides an essential understanding of the issues in order to establish appropriate strategies and policies to sustain the process of mega-city region development.
