Jack would rather stay at sea than fix the mistakes of his grandfather, the late Earl of Stansworth. But inheriting his grandfather's wealth and title and securing the welfare of his sister and mother require living with the aristocracy. Ivy Carlisle, the granddaughter of a dear old family friend, is willing to teach him etiquette and properly introduce him into society. Yet Jack soon learns that his new lifestyle isn't the only challenge. He must survive the conspiracies against him -- and try not to fall madly in love with his tutor.

Blazing New Trails: Sir Sandford Fleming

With its abundance of step-by-step solved problems, concepts, and examples of major real-world companies, this text brings unparalleled transparency to the course. In the new Fourth Edition, all aspects of operations management are explained—its critical impact in today's environments, its relation to every department in an organization, and the importance of an integrated supply chain focus. Quantitative topics are balanced, and students are guided through the coursework that will help lay the foundations for their future careers.

A psychological thriller in the tradition of Patricia Highsmith about two couples caught in a web of conflicting passions while deep-sea diving in the beautiful Canary Islands. In the late 1990s, Sven Fiedler and his girlfriend, Antje, left Germany for the island of Lanzarote, rejecting what they considered a vulgar culture of materialism and judgment. The young couple set up a diving service catering to tourists eager to bask in the sunshine and explore the silent, gleaming marine paradise that makes this otherwise barren volcanic island such a remarkable retreat. Sven's job was simple: take the mechanics of diving seriously, instruct his clients clearly, and stay out of their personal business as best he can. As the island goes smoothly until two German tourists--Jola von der Pahlen, a daytime soap star on the verge of cinematic success, and Theo, a novelist--engage Sven for a high-priced, intensive two-week diving experience. Staying in a guest house on Sven and Antje's property, the two couples and their hosts quickly become embroiled in a tangle of jealousy and suspicion. Sven is struck by Jola's beauty, her evident wealth, and her volatile relationship with the much older Theo. Theo quickly leaps to the conclusion that Sven and Jola are having an affair, but, oddly, he facilitates it rather than trying to intervene. Antje, looking on, grows increasingly wary of these particular clients. As the point of view switches from character to character to the next, the reader is constantly kept guessing about who knows what, and, more important, who is telling the truth. A tale of delusion, temptation, and manipulation plays out, pointing toward a violent end. But a quiet one, down in the underwater world beneath the surface.

This offers honest and largely unedited glimpses into the world of social work of 40 years or so ago. Illustrated by the professional practice of one Colin Millwood, an enthusiastic but otherwise green social worker, it coincides with the early beginnings of his arrival at his local Social Services Department. Collection of short fiction, life stories, and poetry. Stories range from humorous to serious. Poetry is simple free verse.

This book presents a state-of-the-art review of the latest advances in developing calcium-phosphate bone cements and their applications. It covers the synthesis methods, characterization approaches, material modification and novel binders, as well as the fabrication technologies of calcium-phosphate-based biomaterials in regenerative medicine and their clinical applications.

It also highlights methodologies for fabricating scaffolds, biofunctional surfaces/interfaces and subsequently modulating the host response to implantable/injectable materials, and integrates a series of discussions and insights into calcium-phosphate cements and constructs in bone regenerative medicine. As such, the book not only covers the fundamentals but also opens new avenues for meeting future challenges in research and clinical applications.

A series of walks along the routes of eight lost rivers in London, with richly detailed anecdotes outlining the history of each river's route, origins and decline. When we think of London's river, the vast thoroughfare of the Thames immediately springs to mind. But this ancient city was built around other rivers too – and traces of these still remain, for those who know where to look. London's Lost Rivers takes the reader on a series of walks along the routes of eight lost rivers, combining directions for walkers with richly detailed anecdotes outlining the history of each river's route, origins and decline. Tom Bolton reveals a secret network that spreads across the city, from picturesque Hampstead in the North to the hidden suburbs of South London, and runs beneath some of London's most iconic and historic sites. These London pasts are brought to vivid life, populated by characters both famous and infamous, including politicians, forgers, actors, architects, athletes, monarchs and murderers. Evocative, witty and engaging, London's Lost Rivers invites both visitors to the city and lifelong Londoners to explore another

side of London and its rich history, whether on foot or in the imagination.

"This book is about the people I met as I crisscrossed Australia by train and plane and L-plated car: the undefeated dreamers and wild-hearted romantics, the obsessed hobbyists and beautiful failures. It is about heroes and legends, illusions, delusions and hope, and one or two men with shit for brains who ought to be locked up." As anyone who's ever read Mark Dapin's column and features in Good Weekend knows, he's an immensely funny, acute and vivid observer of Australian life. In Strange Country, he takes us on a journey through a very different Australia - a country that's eccentric, puzzling, big-hearted, small-minded, nostalgic and sometimes just plain mad. From the last travelling boxing tent to feral urban sewer rats to Vietnam Veteran bikies and the annual Parkes Elvis Festival, his writing illuminates the stranger side of Australian life in a travel book like no other.

Lost in her ever-changing forms, 'Water' questions who she is after an encounter with a creature in an underground cave. Water seeks all parts of her cycle for answers, which makes her feel overwhelmed and confused. However, an 'old tree' helps her to understand her place in the world and her many interconnections with all living and non-living things. From the unique perspective of Water, the story explores the water cycle drawing out the many interconnections Water has with all living and non-living things.

Blood Gold Revenge is a fiction suspense thriller set in the remote North Queensland outback of Australia. It involves all three tropes of classical drama; man against man, man against nature and man against himself, the story flows easily with the reader finding it hard to down with many twists and turns.

As the capability and utility of robots has increased dramatically with new technology, robotic systems can perform tasks that are physically dangerous for humans, repetitive in nature, or require increased accuracy, precision, and sterile conditions to radically minimize human error. The Robotics and Automation Handbook addresses the major aspects of designing, fabricating, and enabling robotic systems and their various applications. It presents kinetic and dynamic methods for analyzing robotic systems, considering factors such as force and torque. From these analyses, the book develops several controls approaches, including servo actuation, hybrid control, and trajectory planning. Design aspects include determining specifications for a robot, determining its configuration, and utilizing sensors and actuators. The fea

applications focus on how the specific difficulties are overcome in the development of the robotic system. With the ability to increase safety and precision in applications ranging from handling hazardous materials and exploring extreme environments to manufacturing and medicine, the uses for robots are growing steadily. The Robotics and Automation Handbook provides a solid foundation for engineers and scientists interested in designing, fabricating, or utilizing robotic systems.

A comprehensive account of the physical / mechanical behaviour of polyurethanes (PU 's) elastomers, films and blends of variable crystallinity. Aspects covered include the elasticity and inelasticity of amorphous to crystalline PUs, in relation to their sensitivity to chemical and physical structure. A study is made of how aspects of the constitutive responses of PUs vary with composition: the polyaddition procedure, the hard segment, soft segment and chain extender (diols and diamines) are varied systematically in a large number of systems of model and novel crosslinked and thermoplastic PUs. Results will be related to: microstructural changes, on the basis of evidence from x-ray scattering (SAXS and WAXS), and also dynamic mechanical analyses (DMA), differential scanning calorimetry (DSC) and IR dichroism. Inelastic effects will be investigated also by including quantitative correlations between the magnitude of the Mullins effect and the fractional energy dissipation by hysteresis under cyclic straining, giving common relations approached by all the materials studied. A major structural feature explored is the relationship between the nature of the hard segment (crystallising or not) and that of the soft segments. Crystallinity has been sometimes observed in the commercial PUs hard phase but this is usually limited to only a few percent for most hard segment structures when solidified from the melt. One particular diisocyanate, 4,4'-dibenzyl diisocyanate (DBDI) that, in the presence of suitable chain extenders (diols or diamines), gives rise to significant degrees of crystallinity [i-iii] and this is included in the present work. Understanding the reaction pathways involved, in resolving the subtle morphological evolution at the nanometre level, and capturing mathematically the complex, large-deformation nonlinear viscoelastic mechanical behaviour are assumed to bring new important insights in the world basic research in polyurethanes and towards applied industrial research in this area.

Ben Brooksby is a fifth-generation farmer from St Helens Plains in western Victoria. When he was younger, he struggled with anxiety and other mental health issues, as do so many others in rural communities. A simple social media post helped him to turn things around. After he shared a photo on Instagram showing himself naked in a truck full of lentils, he received a huge response, with other farmers wanting to share their own photos - and their stories. As the Naked Farmer movement grew, Ben met people from all around the country who wanted to get naked for mental health. As they got their kits off, they also opened up about their struggles. This is a heartwarming, moving and candid collection of stories of the challenges our farmers are facing, and the way these communities are banding together in response. This textbook presents quantum mechanics at the junior/senior undergraduate level. It is unique in that it describes not only quantum theory, but also presents five laboratories that explore truly modern aspects of quantum mechanics. These laboratories include "proving" that light contains photons, single-photon interference, and tests of local realism. The text begins by presenting the classical theory of polarization, moving on to describe the quantum theory of polarization. Analogies between the two theories minimize conceptual difficulties that students typically have when first presented with quantum mechanics. Furthermore, because the laboratories involve studying photons, using photon polarization as a prototypical quantum system allows the laboratory work to be closely integrated with the coursework. Polarization represents a two-dimensional quantum system, so the introduction to quantum mechanics uses two-dimensional state vectors and operators. This allows students to become comfortable with the mathematics of a relatively simple system, before moving on to more complicated systems. After describing polarization, the text goes on to describe spin systems, time evolution, continuous variable systems (particle in a box, harmonic oscillator, hydrogen atom, etc.), and perturbation theory. The book also includes chapters which describe material that is frequently absent from undergraduate texts: quantum measurement, entanglement, quantum field theory and quantum information. This material is connected not only to the laboratories described in the text, but also to other recent experiments. Other subjects covered that do not often make their way into

undergraduate texts are coherence, complementarity, mixed states, the density operator and coherent states. Supplementary material includes further details about implementing the laboratories, including parts lists and software for running the experiments. Computer simulations of some of the experiments are available as well. A solutions manual for end-of-chapter problems is available to instructors.
