Will Chinese language immersion programs improve students' EOG test scores? In this study of K-5 students, overwhelming evidence has demonstrated that the students in this K-5 Chinese Language Immersion Program (CIP) scored significantly higher than the similar students, in non-immersion programs, in the key instructional areas of English reading, math, and science. Furthermore, CIP students clearly demonstrated consistently strong higher academic performance measured by the EOG test scores starting from the 3rd and continuing through the 5th grade. The synergistic component of the CIP is an exciting new concept and this study may be the first one to have comprehensively and statistically evaluated the CIP program in effort to prove or disprove this thesis. Based on the results of this study, the conclusion would be that yes indeed there is a strong correlation. CIP has a strong synergistic impact on other critical instructional areas. Although one study alone certainly does not resolve all questions, it clearly that CIP has much potential from the synergistic learning perspective. This is surely a very exciting development in K-5 education. This book is an exact copy my doctorate dissertation. My next book, which will be coming soon, will be the synthesized version designed to more

directly explain how to set up and establish effective CIP programs in a K-5 setting to have maximal impact on both the direct goal of teaching Chinese language, and as well as the secondary and synergistic goal of helping the students who are in the CIP to have positive and synergistic improvement in the other important subject areas. This study demonstrates, although not conclusively, this positive synergistic relationship exists.

Research on middle level education indicates that student learning at the middle level has a deep and abiding influence on postsecondary opportunities and career paths. As research continues to highlight the urgency of engaging middle level students in academic learning, it is increasingly clear that these students' multiple literacies must become a part of teaching and learning. Understanding how to address the multiple literacies of middle level students across classroom activities is a critical part of improving student achievement. This volume in the series shares literacy research from multiple contexts and deepens our understanding of the literacies that middle level students bring to school. This volume includes research that identifies how to best teach and learn with our increasingly diverse students. The findings that emerge from this volume help us examine the current state of new and evolving literacies and construct a cutting edge approach to middle level literacy education. Research reports focus on digital literacies including social networking media and games, English language learners, high stakes literacy tests and middle level learners, specifically boys, and literacy teaching and learning in middle level education programs. A wide range of research methods and modes are used in these reports including case studies, teacher inquiry, survey research, and action research.

The purpose of this study was to analyze teachers' perceptions of their working conditions and to what extent the perceptions of 5th grade students' achievement in the areas of mathematics and science in North Carolina. The 2014 student achievement data and 5th grade End-of-Grade (EOG) scores in mathematics and science were obtained from one randomly selected school in each of the 115 school districts in North Carolina. The perceptions of teachers' working conditions were extracted from the 2014 teacher working conditions survey results from each of the same randomly selected 115 schools. This correlation study used a stepwise multiple regression model to determine which teacher working conditions indicator (Time, Facilities and Resources, Community Support, Manage Student Conduct, Teacher Leaders, School Leadership, Professional Development, and Instructional Practices) had the strongest predictive relationship to the scores on mathematics and science. Student achievement data were reported as composite scores that were calculated by adding the percentage of students who scored a 3, 4, and 5 (considered grade level) on each test. This research study will help determine which teacher perceptions of working conditions have the strongest predictive relationship to elementary student achievement in mathematics and science. The findings of this research study specified that the indicators in the North Carolina Teacher Working Conditions survey could predict 5th grade student test scores in science and mathematics. The indicators of Managing Student Conduct, School Leadership, and Community Support and Involvement were significantly correlated to 5th grade EOG science scores. In addition, a significant correlation was discovered between the indicator of Community Support and Involvement and 5th grade EOG mathematics scores. Overall, the strongest predictive relationship to both science and mathematics scores was from the indicator of Community Support and Involvement.

Turn any student into a bookworm with a few easy and practical strategies Donalyn Miller says she has yet to meet a child who doesn't love to read into a reader. No matter how far behind Miller's students might be when they reach her 6th grade classroom, they end up reading an average of 40 to 50 books a year. Miller's unconventional approach dispenses with drills and worksheets that make reading a chore. Instead, she helps students navigate the world of literature and gives them time to read books they pick out themselves. Her approach to reading and teaching is both infectious and inspiring. In the book, you'll find: Hands-on strategies for managing and improving your own classroom library Tactics for helping students walk on their own two feet and continue the reading habit after they've finished with you Examples from student surveys and end-of-year feedback that proves how well the Miller Method works The Book Whisperer includes a list of recommended "kid lit" that helps parents and teachers find the books that students really like to read.

Awakening the Inner Reader in Every Child

Science, engineering, and technology permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges. The United States' position in the global economy is declining, in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12 Science Education outlines a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and, subsequently, revisions to curriculum, instruction, assessment, and professional development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built. These three dimensions are: crosscutting concepts that unify the study of science through their common application across science and engineering; scientific and engineering practices; and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments. In this book, experts in statistics and psychometrics describe classes of linkages, the history of score linkings, data collection designs, and methods used to achieve sound score linkages. They describe and critically discuss applications to a variety of domains. They define what linking is, to distinguish among the varieties of linking and to describe different procedure for linking. Furthermore, they convey the complexity and diversity of linking by covering different areas of linking and providing diverse

perspectives.

S.T.E.M. as An Early Start for Students, Parents and Teachers Using Educational Leadership to Build an Effective 2020 Model By: Dr. Mary J. Ferguson This book is designed to give the visual STEM framework to individuals, families and organizations within local, state or national entities, to guide them with academic program design or individual participation involving students as early as Pre-K all the way through twelfth grade. The content was tested and designer in a charter and a public school sector. Exercising this design proved that early STEM involvement has been proven to allow younger students to begin with confidence when performing through learning science, technology, engineering and math. This read should target parents, teachers and students and show them the importance of federal, state and local collaboration. The benefits of this read will also reveal organizational information for independent application to local schools, students and businesses. Finally, when reading this book a sense of independent research is promoted outside the walls of schools using research technology, emails r simply by picking up your cell phone and contact any STEM or government agency to begin your knowledge-base of STEMology.
