Final Report

This is the 4th edition of the IET's Code of Practice for Inservice Inspection and Testing of Electrical Equipment. The book has been revised to take account of the PAT aspects of Professor Löfstedt's report and the HSE view that promotes a proportionate riskbased approach when assessing the safety of electrical equipment and appliances. This will help users, those responsible for the equipment and testers of the equipment to

maintain safety. HSE encourages the adoption of this approach and the changes will also be reflected in the City & Guilds 2377 course. The Code of Practice enables duty holders to understand the requirements placed on them in law to maintain electrical equipment, using correct documentation, that falls under their control and to understand what inspection and testing involves. It also gives guidance to those carrying out inservice inspection and testing of electrical equipment (PAT).

Managing contractors is a guide for small to medium-sized companies in the chemical industry, but it will also be of use to other industries and larger companies. Safe working with contractors presents a challenge, but

being a smaller company has its advantages. You can be more flexible in your approach and decisions can be made more quickly. Lines of communication are shorter, usually there are not too many people involved and it is easier to know who is around. In this guidance we aim to help you understand what you need to do and give sound practical advice for action. Working together helps everyone to work safely. This second edition brings guidance and references up to date.
