Hosts behind the firewall have no defenses of their own, so when a host in the "trusted" zone is breached, access to your data center is not far behind. That's an all-too-familiar scenario today. With this practical book, you'll learn the principles behind zero trust architecture, along with details necessary to implement it. The Zero Trust Model treats all hosts as if they're internet-facing, and considers the entire network to be compromised and hostile. By taking this approach, you'll focus on building strong authentication, authorization, and encryption throughout, while providing compartmentalized access and better operational agility. The Cambridge International Workshop on Security Protocols has now run for eight years. Each year we set a theme, focusing upon a specific aspect of security protocols, and invite authors to submit position papers. Anybody is welcome to send us a position paper (yes, you are invited) and we don't insist they relate to the current theme in an obvious way. In our experience, the

emergence of the theme as a unifying thread takes place during the discussions at the workshop itself. The only ground rule is that papers should formulate an approach to some unresolved issues, rather than being a description of a finished piece of work.

When the participants meet, we try to focus the discussions upon the conceptual issues which Security protocols link naturally to many other areas of Computer Science, and deep work can be reached very quickly. Afterwards, we invite participants to re-draft their position papers in a way which exposes the emergent issues but leaves open the way to their development. We also prepare written transcripts of the recorded discussions. These are (in some cases very heavily) edited to illustrate the way in which the different arguments and perspectives have interacted. We publish these proceedings as an invitation to the research community. Although many interesting results first see the light of day in a volume of proceedings, laying claim to these is not our primary purpose of publication. Rather, we share our discussions and insights to a wider audience in order to suggest new lines of investigation which the community may fruitfully pursue.
