Strengthening Forensic Science in the United States

Provides an introduction to the Nexus 7 tablet, covering such topics as setup, browsing and managing Web pages using Chrome, streaming music, managing apps, and optimizing data usage.

Written in plain English and avoiding technical jargon wherever possible, this guide to Nexus 7 shows you how to set up and operate your tablet computer.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

As shown in the case of Attila the Hun, and his thirst for power, property, and personal prestige, nation states throughout the world, particularly in Asia and Europe, have, since ancient times, been vulnerable to invasion by other nation states and bands of looters from outside their borders. Terrorism's progress into the modern day has caused extreme concern among members of the international community, who now accept that it is like a cancer that refuses to localize itself within any single organ of the body, but seeks to spread its lethality throughout, even if that means destroying itself along with the host. The fight against terrorism is long and complex, but the end is known in advance. Terrorists are defending a lost cause, and their defeat is inevitable, and democracy, freedom, and diplomacy will triumph.

Welcome to O01S'01 and Calgary! This is the 7th International Conference on Object-Oriented Information Systems (O01S) that focus on Object-Oriented and Web-Based Frameworks for Information Systems. In the last few years we've seen significant new development in this field, from one-off design technologies to reusable frameworks, and from web applications to bioinformatic systems. We perceive that information processing is one of the most important activities of human beings. Object-orientation and frameworks have been the main-stream technologies for design and implementation of large-scale and complex information systems. Recent research advances and industrial innovations in information systems modeling and Internet applications have explored the new trends in shifting information system vendors from component and system developers to services providers. Users of information systems are increasingly demanding higher performance, mobility, and personalization in order to realize the dream to access and obtain necessary information anywhere and anytime. The new development requires the investigation of new architectures, frameworks, processes, and inter-connectivity of information systems at society, organization, team, and personal levels. The O01S'01 Proceedings has put together a program of 53 papers from leading researchers and practitioners in the field of object technology and information systems.

The Nexus of Practices: connections, constellations, practitioners brings leading theorists of practice together to provide a fresh set of theoretical impulses for the surge of practice-focused studies currently sweeping across the social disciplines. The book addresses key issues facing practice theory, expands practice theory's conceptual repertoire, and explores new empirical terrain. With each intellectual move, it generates further opportunities for social research. More specifically, the book's chapters offer new approaches to analysing connections within the nexus of practices, to exploring the dynamics and implications of the constellations that practices form, and to understanding people as practitioners that carry on practices. Topics examined include social change, language, power, affect, reflection, large social phenomena, and connectivity over time and space. Contributors thereby counter claims that practice theory cannot handle large phenomena and that it ignores people. The contributions also develop practice theoretical ideas in dialogue with other forms of social theory and in ways illustrated and informed by empirical cases and examples. The Nexus of Practices will quickly become an important point of reference for future practice-focused research in the social sciences.
