For years, editorial and commercial photographer Zack Arias has been a respected and trusted voice in the photography industry. Known for his photography, his teaching, and his ability to

connect with photographers, Zack has long had an “open door” approach to discussing his career—the ups and the downs—and in so doing has provided a straightforward and candid look inside the industry. By consistently showing great work and offering helpful advice, he has built a large, loyal readership that looks to him for guidance in navigating the currents of a difficult and dynamic industry. Now, Zack finds yet another way to cut through the noise and offer truly valuable information to those struggling to make their way through the twists and turns of an ever-changing landscape. In *Photography Q&A*, Zack answers over 100 questions that he fielded directly from the public. These are questions that range across all aspects of the photo industry: gear, marketing, street photography, vision, pricing, branding, light, models, work/life balance, technical advice, and much more. From how to “put yourself out there” and start to get jobs, to how to get paid for those jobs when the client is slow to cut the check—and everything in between—*Photography Q&A* answers many of the pressing questions that photographers are asking, but until now have not been addressed. The book also includes intermittent “Visual Intermission” sections—where Zack discusses individual images that were milestones in his development as a photographer—as well as worksheets on topics such as pricing and costs that help photographers to “know their numbers.” With all this material, and with insightful, honest answers that come straight from Zack’s experience as a photographer who has seen it all (or at least a lot of it), *Photography Q&A* is an essential resource for any photographer looking for the real answers to the real questions in the industry today.

This publication presents fascinating new findings on ancient Romano-Egyptian funerary portraits preserved in international collections. Once interred with mummified remains, nearly a thousand funerary portraits from Roman Egypt survive today in museums around the world, bringing viewers face-to-face with people who lived two thousand years ago. Until recently, few of these paintings had undergone in-depth study to determine by whom they were made and how. An international collaboration known as APPEAR (Ancient Panel Paintings: Examination, Analysis, and Research) was launched in 2013 to promote the study of these objects and to gather scientific and historical findings into a shared database. The first phase of the project was marked with a two-day conference at the Getty Villa. Conservators, scientists, and curators presented new research on topics such as provenance and collecting, comparisons of works across institutions, and scientific studies of pigments, binders, and supports. The papers and posters from the conference are collected in this publication, which offers the most up-to-date information available about these fascinating remnants of the ancient world.

It's a tough time to be a scientist: universities are shuttering science departments, federal funding

agencies are facing flat budgets, and many newspapers have dropped their science sections altogether. But according to Marc Kuchner, this antiscience climate doesn't have to equal a career death knell-it just means scientists have to be savvier about promoting their work and themselves. In *Marketing for Scientists*, he provides clear, detailed advice about how to land a good job, win funding, and shape the public debate. As an astrophysicist at NASA, Kuchner knows that "marketing" can seem like a superficial distraction, whether your daily work is searching for new planets or seeking a cure for cancer. In fact, he argues, it's a critical component of the modern scientific endeavor, not only advancing personal careers but also society's knowledge. Kuchner approaches marketing as a science in itself. He translates theories about human interaction and sense of self into methods for building relationships-one of the most critical skills in any profession. And he explains how to brand yourself effectively-how to get articles published, give compelling presentations, use social media like Facebook and Twitter, and impress potential employers and funders. Like any good scientist, Kuchner bases his conclusions on years of study and experimentation. In *Marketing for Scientists*, he distills the strategies needed to keep pace in a Web 2.0 world.

An award-winning documentary photographer delivers a stunning visual history of the Silicon Valley technology boom, in which he was witness to key moments in the careers of Steve Jobs and more than

seventy other leading innovators as they created today's digital world. An eye-opening chronicle of the Silicon Valley technology boom, capturing key moments in the careers of Steve Jobs and more than seventy other leading innovators as they created today's digital world In the spring of 1985, a technological revolution was under way in Silicon Valley, and documentary photographer Doug Menuez was there in search of a story—something big. At the same time, Steve Jobs was being forced out of his beloved Apple and starting over with a new company, NeXT Computer. His goal was to build a supercomputer with the power to transform education. Menuez had found his story: he proposed to photograph Jobs and his extraordinary team as they built this new computer, from conception to product launch. In an amazing act of trust, Jobs granted Menuez unlimited access to the company, and, for the next three years, Menuez was able to get on film the spirit and substance of innovation through the day-to-day actions of the world's top technology guru. From there, the project expanded to include the most trailblazing companies in Silicon Valley, all of which granted Menuez the same complete access that Jobs had. Menuez photographed behind the scenes with John Warnock at Adobe, John Sculley at Apple, Bill Gates at Microsoft, John Doerr at Kleiner Perkins, Bill Joy at Sun Microsystems, Gordon Moore and Andy Grove at Intel, Marc Andreessen at Netscape, and more than seventy other leading companies and innovators. It would be fifteen years before Menuez stopped taking pictures, just as the dotcom bubble burst. An extraordinary era was coming to its close. With his singular behind-the-scenes access to these notoriously insular companies, Menuez was present for moments of heartbreaking failure and unexpected success, moments that made history, and moments that revealed the everyday lives of the individuals who made it happen. This period of rapid, radical change would affect almost every aspect of our culture and our lives in ways both large and small and would also create more jobs and wealth than any other time in human history. And Doug Menuez was there, a witness to a revolution. In more than a hundred photographs and accompanying commentary, Fearless Genius captures the human face of innovation and shows what it takes to transform powerful ideas into reality.
