The second method used by Lyapunov to study the stability of the trivial solution of $dx/dt = Ax + f(x)$ leads to the problem of solving the matrix equation $AX + XA' = C$. It is shown that this question is related to Kronecker products and Kronecker sums, and the general problem of solving $AX + XB = C$ is resolved in this fashion. (Author).

Organometallic chemistry is an interdisciplinary science which continues to grow at a rapid pace. Although there is continued interest in synthetic and structural studies the last decade has seen a growing interest in the potential of organometallic chemistry to

provide answers to problems in catalysis synthetic organic chemistry and also in the development of new materials. This Specialist Periodical Report aims to reflect these current interests reviewing progress in theoretical organometallic chemistry, main group chemistry, the lanthanides and all aspects of transition metal chemistry. Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967 the whole spectrum of

chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three, volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a 'must'. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.

pone énfasis en el “seguimiento del niño o desde sus primeros tanteos gráficos” —siendo el ver, parte esencial de la metodología planteada, a partir de la expresión como producto de lo espontáneo, que surge del gesto, el impulso emotivo— de lo que resulta lo inédito, lo vital y genuino, que caracteriza la expresión espontánea de los chicos, cuando están libres y sin condicionamientos, que les inhiben y/o bloquean sus naturales tendencias expresivas. A partir de ahí, el estudio de la expresión gráfica infantil, se plantea como primer paso para llegar a un criterio didáctico que estimule la creatividad del escolar. Surge la interrogación ¿cuál es el mundo perceptivo de los niños? —la autora propone el conocer

la relación entre percepción creadora e imaginación— y alentar la colaboración de los padres, a fin de que los niños puedan responder a las estrategias didácticas que favorezcan los nuevos lineamientos pedagógicos que preservan la autenticidad del mundo infantil. Casi en su totalidad el texto es una exposición clara de las variadas posibilidades pedagógicas de enfocar la problemática de la “educación por el arte”, relatando las diferentes experiencias didácticas puestas en práctica desde la catedral, por las residentes del profesorado de Plástica. Se detallan, cada una de ellas, con los planes desarrollados y los productos obtenidos; desde “talleres comunitarios y escolares” y la valoración de los dibujos

Lo completan una monografía sobre “jardines infantiles” y una tesis final sobre “la expresión plástica y la educación por el arte” —trabajo de residentes, que ampliaron así la visión de la problemática planteada.

Este documento contiene 38 contribuciones en siete secciones, que exponen las consideraciones socioculturales, económicas y ambientales relativas a la introducción de las técnicas de integración, y ofrece numerosos ejemplos de cultivos integrados incluyendo la integración peces-animales y arroz-peces, así como aspectos de la alimentación, gestión, reproducción y cría de peces en el contexto de la integración. El objetivo de esta publicación es dar a los responsables de la toma de decisiones sobre agricultura y desarrollo rural una visión general y los fundamentos de la integración agricultura-acuicultura, y ayudarles a decidir si desean incluir estas prácticas en sus programas. La publicación ofrece ejemplos de sistemas de integración que pueden resultar útiles para

with ease. This innovative publication brings together a skillful treatment of MATLAB and programming alongside theory and modeling. By presenting these topics in tandem, the author enables and encourages readers to perform their own computer experiments, leading them to a more profound understanding of differential equations. The text consists of three parts: Introduction to MATLAB and numerical preliminaries, which introduces readers to the software and its graphical capabilities and shows how to use it to write programs Ordinary Differential Equations Partial Differential Equations All the tools needed to master using MATLAB to solve differential equations are provided and include: "Exercises for the Reader" that range from routine computations to more advanced conceptual and theoretical questions (solutions appendix included) Illustrative examples,

All the material has been classroom-tested over the course of many years, with the result that any self-learner with an understanding of basic single-variable calculus can master this topic. Systematic use is made of MATLAB's superb graphical capabilities to display and analyze results. An extensive chapter on the finite element method covers enough practical aspects (including mesh generation) to enable the reader to numerically
