Maximum Power is a synthesis of the creative genius of Howard Thomas Odum as seen through his own words and those of his students, many of whom are now applying his ideas to the world in diverse ways. Offering the holistic, system-oriented thinking of Odum, this in-depth volume examines the interrelationship of humans and nature by integrating environment, energy, and economics. Maximum Power traces the development of Odum's ideas with the objective

of providing the conceptual and research history that has led to Odum's far-reaching ideas about making social decisions. The volume is organized along the chronological path that Odum himself followed, from ecology to ecological engineering to ecological economics to his controversial synthesis called "energy analysis." The writings of fifty scientists from a wide range of disciplines are grouped into five sections: The Contributions of H.T. Odum

to Subdisciplines of Ecology, Environmental Management and Engineering, H.T. Odum and Economics, Education, and Personal Memoirs.

During the 1920s the RAF established a tradition of using squadron badges on their aircraft. These emblems were widely publicized and offered no security when war with Germany broke out. Covers the 1938 introduction of the two-letter system.

Maps and digitized map data provide information for a broad range of applications, from business and Government, to engineering and military, to research and leisure. The new edition of the highly respected World Mapping Today is an essential reference for librarians and anyone concerned with the production, acquisition, distribution or use of maps and other forms of spatial data. World Mapping Today recognizes the inherent difficulties in finding out about the availability of maps and other forms of spatial data. Building on the strengths of the first edition, the book has been entirely rewritten and greatly expanded and now includes: New reviews on the status of world mapping and the problems and possibilities of map and data acquisition in the electronic age Descriptions of mapping in individual countries contain information about both conventional and digital cartography Catalogue sections covering a broad range of material, both topographic and thematicIn addition there are lists of publishers' addresses for each country, now also including telephone and fax numbers, e-mail addresses and the URLs of useful websites. This edition also includes 350 graphic indexes of major map series, of which 150 are entirely new and all of which have been specially redrawn.

The Consumer in American Society: Additional Dimensions

This first book to cover all aspects of multi-parametric programming and its applications in process systems engineering includes theoretical developments and algorithms in multi-parametric programming with applications from the manufacturing sector and energy and environment analysis. The volume thus reflects the importance of fundamental research in multi-parametric programming applications, developing mechanisms for the transfer of the new technology to industrial problems. Since the topic applies to a wide range of process systems, as well as due to the interdisciplinary expertise required to solve the challenge, this reference will find a broad readership. Inspired by the leading authority in the field, the Centre for Process Systems Engineering at Imperial College London.
