This book provides an overview of the theory, practice and context of entrepreneurship and innovation at both the industry and firm level. It provides a foundation of ideas and understandings designed to shape the reader's thinking and behaviour to better appreciate the role of innovation and entrepreneurship in modern economies, and to recognise their own abilities in this regard. The book is aimed at students studying advanced levels of entrepreneurship, innovation and related fields as well as practitioners (for example, managers, business owners). As entrepreneurship and innovation are largely indivisible elements and cannot be adequately understood if studied separately, the book provides the reader with an overview of these elements and how they combine to create new value in the market. This edition is updated with recent international research, including research and examples from Europe, the US, and the Asia-Pacific region.

Culture and Leadership Across the World: The GLOBE Book of In-Depth Studies of 25 Societies is the second major publication of GLOBE (Global Leadership and Organizational Behavior Effectiveness), a groundbreaking, large-scale project on international management research featuring contributions from nearly 18,000 middle managers from 1,000 organizations in 62 countries, perhaps the largest project of its kind ever undertaken. This volume effectively presents a complex collection of global research addressing the culture of particular countries, leadership qualities within those countries, and recommendations on how managers should conduct business in countries other than their own. A massive effort with a cross-cultural focus and broad international appeal, this book explores: how leadership is conceptualized and enacted in its cultural milieu; quantitative data including middle manager questionnaires, unobtrusive measurement, and participant observation data; qualitative research from interviews, focus groups, and media analyses; and theoretical and methodological pitfalls that arise in the effort to develop universal management theories. This book is a coherent and well-organized presentation of the findings of the GLOBE Project and will appeal to scholars in leadership, management, international business, cultural studies; and also to practicing managers.

Why do certain foods harm some people and help others? How come the results of a weight loss programme varies from individual to individual? And why do some people fall sick more often than others? The science of Ayurveda holds answers to these questions and many more. Its scriptures took a holistic approach to health by combining our lifestyle with our natural tendencies (which vary from one person to another). This groundbreaking new work from Om Swami combines the yogic view of food as sattvic, rajasic and tamasic with Ayurvedic perspective, and further relates it to the modern view of foods as acidic and alkaline. This is also the first time that Ayurvedic prakriti (vata, pitta and kapha) has been discussed in the context of yogic prakriti (sattvic, rajasic and tamasic) in a truly cohesive fashion.The Wellness Sense extracts the essence of Ayurveda, yoga and tantra to combine it with modern medicine in this simple, step-by-step handbook on how to take better care of yourself.Accessibly written, deeply researched and distilled from Om Swami's own lived experience, The Wellness Sense puts your health and happiness in your hands.

'Inclusive Designing' presents the proceedings of the seventh Cambridge Workshop on Universal Access and Assistive Technology (CWUAAT '14). It represents a unique multi-disciplinary workshop for the Inclusive Design Research community where designers, computer scientists, engineers, architects, ergonomists, policymakers and user communities can exchange ideas. The research presented at CWUAAT '14 develops methods, technologies, tools and guidance that support product designers and architects to design for the widest possible population for a given range of capabilities, within a contemporary social and economic context. In the context of developing demographic changes leading to greater numbers of older people and people with disabilities, the general field of Inclusive Design Research strives to relate the capabilities of the population to the design of products. Inclusive populations of older people contain a greater variation in sensory, cognitive and physical user capabilities. These variations may be co-occurring and rapidly changing leading to a demanding design environment. Recent research developments have addressed these issues in the context of: governance and policy; daily living activities; the workplace; the built environment, Interactive Digital TV and Mobile communications. Increasingly, a need has been identified for a multidisciplinary approach that reconciles the diverse and sometimes conflicting demands of Design for Ageing and Impairment, Usability and Accessibility and Universal Access. CWUAAT provides a platform for such a need. This book is intended for researchers, postgraduates, design practitioners, clinical practitioners, and design teachers.
