The auditor also tests IRS's compliance with selected provisions of significant laws and regulations and its financial systems; compliance with the Federal Financial Management Improvement Act of 1996 (FFMIA), includes recommendations, charts and tables.

Teachers regularly seek to update their practice with newly-developed tools from the realm of research, with the aim of applying them directly in the classroom, particularly for teaching reading and writing. Thus, teachers' continuing education is dependent on the effective dissemination and appropriation of research results. This book explores this problem from multiple angles, presenting research projects from France and Quebec, Canada. Using a variety of methods, including creating teaching materials and engaging classroom teachers in the research process, the authors demonstrate the importance of ownership and dissemination of research results in schools. Although this necessity sometimes complicates the work of researchers, it is vital to develop and maintain the relationship between reading-writing research and its practical applications.

Originally published in 1992. This book brings together the work of a number of distinguished international researchers engaged in basic research on beginning reading. Individual chapters address various processes and problems in learning to read - including how acquisition gets underway, the contribution of story listening experiences, what is involved in learning to read words, and how readers represent information about written words in memory. In addition, the chapter contributors consider how phonological, onset-rime, and syntactic awareness contribute to reading acquisition, how learning to spell is involved, how reading ability can be explained as a combination of decoding skill plus listening comprehension skill, and what causes reading difficulties and how to study these causes.
