Principles and Practice of Psychiatric Nursing

An Interprofessional Approach

Concepts of Care in Evidence-Based Practice

The most comprehensive psychiatric nursing care planning text available assists students and practitioners in providing effective care in a variety of settings. Clear presentation of information, consistent use of the nursing process, correlation of nursing and medical diagnoses, and prioritization of interventions make this text an invaluable resource. Grounded in the latest classification of the Diagnostic and Statistical Manual of Mental Disorders (DSM-IV-TR) and the most current list of NANDA-approved nursing diagnoses, this text covers a wide range of disorders, their psychopathology, and appropriate nursing interventions with rationales. Care plans use real clinical situations and include therapeutic and nontherapeutic dialogue examples to familiarize nurses with likely scenarios and equip them with the tools they need to feel confident in any clinical setting. The first chapter, The Nursing Process, effectively describes the central principles of psychiatric nursing practice in detailing the ANA's six-step nursing process along with additional information on therapeutic nurse-client communication skills, client history and assessment tools, NIC and NOC, and more. The six-step nursing process format is maintained throughout to emphasize a practice-oriented, problem-solving approach to psychiatric care. Major psychiatric disorders are reviewed consistently and completely with sections including Etiology, Epidemiology, Assessment and Diagnostic Criteria, Interventions, and Prognosis and Discharge Criteria. With this basis of knowledge, relevant care

plans are offered in the second section of each chapter. Care plans based on DSM-IV-TR medical and NANDA nursing diagnoses are logically and consistently organized with Assessment Data, Outcome Criteria, Planning and Implementation, and Evaluation sections. Assessment Data sections include detailed related factors (etiology) and defining characteristics or risk factors as appropriate for the specific diagnosis. Outcome Criteria sections give the reader clear indications of the desired end state. Planning and Implementation sections list specific, relevant, and practical nursing interventions with rationales in a clear, comprehensible two-column format. UNIQUE! Therapeutic and non-therapeutic dialogue examples are presented throughout to promote more effective client communication. Evaluation sections state the role of outcome evaluation as a critical and ongoing step in the nursing process. Client and Family Teaching boxes include Nurse Needs to Know and Teach Client and Family sections covering all aspects of post-treatment instructions for clients and caregivers. DSM-IV-TR boxes list all related DSM-IV-TR diagnoses for quick reference. Helpful appendices contain information and strategies that are timely and useful in the care of clients with mental and emotional disorders including such topics as psychiatric and psychosocial therapies, grief and loss, spirituality, and many more.

Here's the most complete and easy-to-use resource on how to develop practical, individualized plans of care for psychiatric and mental health patients. It's the perfect quick reference now for clinical rotations...and later for practicing nurses. This Pocket Guide is really two books in one! The first half provides the diagnostic information needed to create a care plan; the second half covers the safe prescription and administration of psychotropic medications. And, the concepts can be applied in a variety of healthcare settings...from in-patient hospitalization through the outpatient clinic...to home health and private practice.

Students and psychiatric nurses will sharpen their diagnostic skills from the extensively updated revision of *Nursing Diagnoses in Psychiatric Nursing*. Covers predisposing factors, symptomatology, possible nursing etiologies, defining characteristics, goals, interventions, and discharge criteria for the more common psychiatric disorders. Focuses on the severely ill in an acute care setting and discusses applications in the outpatient and community setting.

Care Plans and Psychotropic Medications, Edition by Mary C. Townsend, ISBN

Essentials of Psychiatric Mental Health Nursing

The fourth edition of this practical reference presents 48 consistent, comprehensive care plans to assist students and practitioners in providing effective psychiatric nursing care in a variety of settings. It covers a wide range of disorders, their psychopathology, and appropriate nursing interventions.

Developed especially for practicing nurses preparing for the certification examination offered by the American Nurses

Credentialing Center (ANCC), the Psychiatric Nursing Certification Review Guide for the Generalist and Advanced Practice Psychiatric and Mental Health Nurse provides a succinct, yet comprehensive review of the core material. This book has been organized to give the reviewer test taking strategies and techniques and sample test questions, which are intended to serve as an introduction to the testing arena. In addition, a bibliography is included for those who need a more in depth discussion of the subject matter in each chapter. The Third Edition has been completely revised and updated to reflect current guidelines and information from the latest version of the DSM IV-TR. The medications and use of medications has also been updated to reflect proper usage and doses.

This focused approach to psychiatric mental health provides you with an uncomplicated way to understand the often-intimidating subject of psychiatric nursing. Inside you'll find two themes of psychiatric mental health nursing: the How of Communication and the Why of Evidence. You will also find easy-to-understand explanations of the research that applies to psychiatric nursing issues and how to incorporate this evidence into everyday care.
