Margaret Newman is one of the pre-eminent nursing theorists whose qualitative theories and methods have expanded the scientific base for the field. Her theory defines health as the unfolding or expanding of consciousness and nursing as an integrative force that focuses on the wholeness of the person. This volume offers a clear guide to applying theory to practice with individual, family and community health. Marchione's work reflects several years of experimentation and application of Newman's theory.

In contrast to the medical science paradigm, Rosemarie Parse's work is based on phenomenology and is of

special interest to nurses and students engaged in qualitative research. Her Health as Human Becoming Theory, which forms a base for holistic nursing, defines humans as synergistic beings and nursing as a method of promoting the quality of life as perceived by the individual. The author of this practical and very readable book presents Parse's theory in such a way that both practitioners and trainees can learn how to incorporate qualitative methods and theories into their theoretical nursing base.

*The 3rd Edition of this AJN Book-of-the-Year Award-Winner helps you answer those questions with a unique approach to the scientific basis of nursing knowledge. Using conceptual models, grand theories, and middle-range theories as guidelines you will learn about the current state and future of nurse educators, nurse researchers, nurse administrators, and practicing nurses. Nursing theory is a major part of all nursing courses and nurses are encouraged to use theories in practice, but it is not always easy for the student to make a real connection between the two. Drawing on many years' experience of teaching and research, Hugh McKenna addresses the theory needs of both students and qualified staff. He demystifies the confusing terminology associated with nursing theory and shows how all nurses can build theory from practice through reflection and*
