Cases with Expert Commentary

Prepared by residents and attending physicians, this pocket-sized loose-leaf is created in the style of Pocket Medicine by providing key clinical data for students and residents and focuses on patient care in the ob/gyn setting. Each chapter contains the brief background, differential diagnoses, clinical algorithms, and literature citations that allows a student or intern to shine during rounds by helping them quickly formulate basic management plans. Special appendices on pelvic anatomy, common ob-gyn procedures, common tests in ob-gyn, and drugs in ob and breastfeeding, may be especially useful references. Because ob-gyn involves so much interdisciplinary learning, a carefully prepared cross-referenced index is included to help assist in locating information quickly. Pocket ObGyn offers a handy summary of key clinical information designed to form the basis of an individual's pocket notebook or to be integrated into one's own notebook.

Algorithms in Obstetrics and Gynaecology presents the core knowledge needed to tackle all situations in obstetrics and gynaecology, in a structured fashion. All algorithms are designed to support rapid decision making in the most clinically relevant situations to minimise the risks of a poor outcome. A range of clinical problems are covered from common non-life-threatening emergencies such as hyperemesis in pregnancy, to life-threatening acute events such as ectopic pregnancy, acute fetal distress or maternal collapse. Each topic is presented as either an algorithm, a care pathway, or table of key information and has been carefully structured to ensure a logical progression of thought to aid anticipation, early diagnosis and prompt and appropriate management. Accompanying key learning points highlight the essential information from the topic. Based on current national guidelines and clinical evidence, the algorithms and care pathways can be used as a reliable and practical resource for day to day practice in obstetrics and gynaecology.
