The field of occupational health and safety constantly changes, especially as it

infectious hazards  
are of particular  
importance at

For example, the  
discovery that B

This report follows up on an interim report released in February 2004 that focused on immediate needs in the areas of animal care and management, recordkeeping, and

pest control. The report finds that the zoo has made good-faith efforts to correct deficiencies noted in the interim report and has made some noticeable improvements in the past year in zoo operations and animal care. However, problems in areas such as staff training,

and strategic planning  
still need to be  
addressed.

Specifically, the report  
recommends that the

programs to ensure  
that people who are

ISA 2000 represents a departure from the

usual approach to managing health and safety. Its starting point is not legislation but good management practice. The rationale for this is simple - occupational health and safety legislation is invariably based on good practice, but not all good practice is enshrined in

legislation. Logically, therefore, using good practice as the starting point should result in a more comprehensive and effective control system which automatically ensures compliance with the law - and this is what ISA 2000 provides. It also provides an extremely useful

mechanism for complying with the new OH & S standard for BSI - OHSAS 18001. The system contains a set of initiatives, comprising 233 individual elements, which cover the entire spectrum of occupational health and safety. These are laid out in a formal structure that

facilitates the building of the system and auditing it later on.

This volume (Volume 1) contains those elements that should be implemented as part of the health and safety management system of any company in any industry sector. They have been selected to provide management

controls against the general hazards encountered in all workplaces, large or small, and as such reflect minimum compliance with fundamental safety law. Volume 2 contains further elements that may need to be included for reasons of legal requirement, or the

circumstances of the  
organization such as  
the industry sector.

The elements are  
described in detail,
