Their Eyes Were Watching God is a 1937 novel by African-American writer Zora Neale Hurston. It is considered a classic of the Harlem Renaissance of the 1920s, and it is likely Hurston's best known work.
This volume covers the 2006 Gateway Science specification for all exam boards - AQA, Edexcel and OCR. The content emphasises the shift from fact learning to investigating and understanding how science works, making it more exciting, up-to-date and relevant to everyday life.

This Success Revision Guide offers accessible content to help students manage their revision and prepare for the exam efficiently. The content is broken into manageable sections and advice is offered to help build students' confidence. Exam tips and techniques are provided to support students throughout the revision process.

Rev. ed. of: Foundations of psychiatric mental health nursing / [edited by] Elizabeth M. Varcarolis, Margaret Jordan Halter. 6th ed. c2010.

Educating dual language learners (DLLs) and English learners (ELs) effectively is a national challenge with consequences both for individuals and for American society. Despite their linguistic, cognitive, and social potential, many ELsâ€"who account for more than 9 percent of enrollment in grades K-12 in U.S. schoolsâ€"are struggling to meet the requirements for academic success, and their prospects for success in postsecondary education and in the workforce are jeopardized as a result. Promoting the Educational Success of Children and Youth Learning English: Promising Futures examines how evidence based on research relevant to the development of DLLs/ELs from birth to age 21 can inform education and health policies and related practices that can result in better educational outcomes. This report makes recommendations for policy, practice, and research and data collection focused on addressing the challenges in caring for and educating DLLs/ELs from birth to grade 12.

Describes how patterns of information, knowledge, and cultural production are changing. The author shows that the way information and knowledge are made available can either limit or enlarge the ways people create and express themselves. He describes the range of legal and policy choices that confront.

The Wealth of Networks
New Scientist

Every day, billions of photographs, news stories, songs, X-rays, TV shows, phone calls, and emails are being scattered around the world as sequences of zeroes and ones: bits. We can't escape this explosion of digital information and few of us want to-the benefits are too seductive. The technology has enabled unprecedented innovation, collaboration, entertainment, and democratic participation. But the same engineering marvels are shattering centuries-old assumptions about privacy, identity, free expression, and personal control as more and more details of our lives are captured as digital data. Can you control who sees all that personal information about you? Can email be truly confidential, when nothing seems to be private? Shouldn't the Internet be censored the way radio and TV are? is it really a federal crime to download music? When you use Google or Yahoo! to search for something, how do they decide which sites to show you? Do you still have free speech in the digital world? Do you have a voice in shaping government or corporate policies about any of this? Blown to Bits offers provocative answers to these questions and tells intriguing real-life stories. This book is a wake-up call To The human consequences of the digital explosion.

Librarians and other library professionals will find this informative book chock full of thought-provoking papers that will help you find new solutions to the collection development problems your library may experience while facing this new digital age. Collection Development in a Digital Environment is a result of papers presented at the 1998 University of Oklahoma Libraries Conference. You will discover ways to help your library take the lead in advancing the academic agenda through technology while at the same time leaning how technology requires change in the way libraries themselves operate. Collection Development in a Digital Environment explores ethical and technological dilemmas of collection development and gives several suggestions on how your library can successfully deal with these challenges and provide patrons with the information they need. This guide covers many valuable ways that your library can be better prepared for developing a “user friendly” collection of materials in this new digital age. You will discover how methods to shift your library from buying materials for collections for faculty or students that may need them sporadically to a system of responsiveness and customization where “just in time” and “just for you” are the standards of information access, making you and your library both time-effective and cost-effective. Collection Development in a Digital Environment brings to light many ways in which libraries can improve collection development methods, such as: using the Association of Research Libraries (ARL) initiatives to improve global access to information, such as the Global Resources Program, which features a seamless web of interconnected, coordinated, and interdependent research collections that are electronically accessible to users examining discussions on scenario-driven planning and the benefits of having your patrons let you know what they are interested in instead of guessing what materials they may be interested in analyzing the influence of the World Wide Web on the role of libraries to discover how you can use these ideas to expand the collection of materials in your library gaining insight into how the concept of disintermediation in the publishing process will help libraries use the electronic environment to eliminate intermediate sources and collect materials directly from the publisher, thus saving time and money From the insightful chapters in Collection Development in a Digital Environment, you will find new and successful ways to use the new digital environment to enhance collection development in your library. This unique book will help your library be more digitally accessible while still being user-friendly to your clientele.

A revision guide that covers the core content of the OCR Science A (single award) specification, from the Twenty First Century Science Suite.

One of the most significant developments in school education in recent years has been the development and introduction of standards, a subject of considerable controversy. This book is the result of a symposium held in Kiel, a symposium that was arranged by two leading science education groups, one at IPN (Leibniz Institute for Science Education at the University of Kiel) in Germany and the other at the University of York, UK. The seminar brought together experts from 15 countries. These countries include those that have extensive experience with the effects of standards on the educational system, on individual schools and teachers and on students. Other reports concern countries which are introducing them shortly and yet others on countries that are in the early stages of development of standards. 11 are from Europe and the others are from Australia, Israel, Taiwan and the U.S. The book is divided into three parts. In Part A, two of the organizers set the scene, describing the reasons for arranging the symposium and outlining the preparations and the work done at the meeting. Part B contains 17 reports from the 15 countries and in Part C, there are two summaries, analysing the conclusions, taken from two different vantage points. The controversies surrounding standards remain. However, this book gives a succinct and authoritative overall account of the advantages and disadvantages of their introduction taken from the experiences of many countries.

Did the Thatcher years and their aftermath constitute a revolution or a restoration in education. Do they represent a departure from, or a reinforcement of tradition? Contemporary Debates in Education is a thought-provoking volume which reviews the reforms of the eighties and early nineties, then follow this with an examination of the long-standing issues in education over the last century in order to relate current reforms and changes to their broader historical background, so that those with a general or professional interest in education can better understand the process in which they are involved.

Covers the 2006 Gateway Additional Science specification for all exam boards - AQA, Edexcel and OCR, for students going on to study Additional Science. Part of the "Success" series, this title emphasises the shift from fact learning to investigating and understanding how science works.

A revision guide covering the core content of the OCR Science B (single award) specification from the Gateway Science suite.

Have you ever wondered what it is like to work on a nuclear power plant? Robert Dutch worked in the UK's nuclear industry for many years as a scientist and then as a tutor at a nuclear training center. He also holds degrees in theology. Drawing upon his qualifications and experience Robert addresses the controversial issue of nuclear power from a Christian perspective. In contrast to a negative nuclear narrative often portrayed, he presents a positive nuclear narrative alongside other ways of generating electricity. Be prepared to be c

about nuclear's merits in providing clean, low-carbon electricity.

NEW YORK TIMES BESTSELLER • Misconceptions, misunderstandings, and flawed facts finally get the heave-ho in this humorous, downright humiliating book of reeducation based on the phenomenal British bestseller. Challenging what most of us assume to be verifiable truths in areas like history, literature, science, nature, and more,The Book of General Ignorance is a witty “gotcha” compendium of how little we actually know about anything. It’ll have you scratching your head wondering why we even bother to go to school. Think Magellan was the first man to circumnavigate the globe, baseball was invented in America, Henry VIII had six wives, Mount Everest is the tallest mountain? Wrong, wrong, wrong, and wrong again. You’ll be surprised at how much you don’t know! Check out The Book of General Ignorance for more fun entries and complete answers to the following: How long can a chicken live without its head? About two years. What do chameleons do? They don’t change color to match the background. Never have; never will. Complete myth. Utter fabrication. Total Lie. They change color as a result of different emotional states. How many legs does a centipede have? Not a hundred. How many toes has a two-toed sloth? It’s either six or eight. Who was the first American president? Peyton Randolph. What were George Washington’s false teeth made from? Mostly hippopotamus. What was James Bond’s favorite drink? Not the vodka martini.

This workbook offers accessible practice to help manage GCSE Additional Science revision and prepare for the exam efficiently. The content is broken into manageable sections and advice is given to help build confidence. Tips and techniques provide support throughout the revision process.

An award-winning scientist offers his unorthodox approach to childrearing: “Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions” (Amy Chua, author of Battle Hymn of the Tiger Mother). If you’re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley’s sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You’ll be laughing and learning at the same time.

Four gems, with new introductions, mark acclaimed Indian writer R. K. Narayan's centennial Introducing this collection of stories, R. K. Narayan describes how in India "the writer has only to look out of the window to pick up a character and thereby a story." Composed of powerful, magical portraits of all kinds of people, and comprising stories written over almost forty years, Malgudi Days presents Narayan's imaginary city in full color, revealing the essence of India and of human experience. This edition includes an introduction by Pulitzer Prize- winning author Jhumpa Lahiri. For more than seventy years, Penguin has been the leading publisher of classic literature in the English-speaking world. With more than 1,700 titles, Penguin Classics represents a global bookshelf of the best works throughout history and across genres and disciplines. Readers trust the series to provide authoritative texts enhanced by introductions and notes by distinguished scholars and contemporary authors, as well as up-to-date translations by award-winning translators.
