New edition with foreword by Nobel Peace Prize winner Desmond Tutu: “How extraordinary that this humble suitcase has enabled children all over the world to learn through Hana’s story the terrible history of what happened and that it continues to urge them to heed the warnings of history.” In the spring of 2000, Fumiko Ishioka, the curator of a small Holocaust education centre for children in Tokyo, received a very special shipment for an exhibit she was planning. She had asked the curators at the Auschwitz museum if she could borrow some artifacts connected to the experience of children at the camp. Among the items she received was an empty suitcase. From the moment she saw it, Fumiko was captivated by the writing on the outside that identified its owner - Hana Brady, May 16, 1931, Waisenkind (the German word for orphan). Children visiting the centre were full of questions. Who was Hana Brady? Where did she come from? What was she like? How did Hana become an orphan? What happened to her? Fueled by the children’s curiosity and her own need to know, Fumiko began a year of detective work, scouring the world for clues to the story of Hana Brady. Writer Karen Levine follows Fumiko in her search through history, from present-day Japan, Europe and North America back to 1938 Czechoslovakia and the young Hana Brady, a fun-loving child with a passion for ice skating. Together with Fumiko, we learn of Hana’s loving parents and older brother, George, and discover how the family’s happy life in a small town was turned upside down by the invasion of the Nazis. Based on an award-winning CBC documentary, Hana’s Suitcase takes the reader on an incredible journey full of mystery and memories, which come to life through the perspectives of Fumiko, Hana and later Hana’s brother, who now lives in Canada. Photographs and original wartime documents enhance this extraordinary story that bridges cultures, generations and time. Ideal for young readers aged 9 and up. Hana’s Suitcase is part of the award-winning Holocaust Remembrance Series for Young Readers.

Yakuza Moon is the shocking, yet intensely moving memoir of 37-yearold Shoko Tendo, who grew up the daughter of a yakuza boss. Tendo lived her life in luxury until the age of six, when her father was sent to prison, and her family fell into terrible debt. Bullied by classmates who called her "the yakuza girl," and terrorized at home by a father who became a drunken, violent monster after his release from prison, Tendo rebelled. A regular visitor to nightclubs at the age of 12, she soon became a drug addict and a member of a girl gang. By the age of 15 she found herself sentenced to eight months in a juvenile detention center. Adulthood brought big bucks and glamour when Tendo started working as a bar hostess during Japan's booming bubble economy of the nineteen- eighties. But among her many rich and loyal patrons there were also abusive clients, one of whom beat her so badly that her face was left permanently scarred. When her mother died, Tendo plunged into such a deep depression that she tried to commit suicide twice. Tendo takes us through the bad times with warmth and candor, and gives a moving and inspiring account of how she overcame a lifetime of discrimination and hardship. Getting tattooed, from the base of her neck to the tips of her toes, with a design centered on a geisha with a dagger in her mouth, was an act that empowered her to start making changes in her life. She quit her job as a hostess. On her last day at the bar she looked up at the full moon, a sight she never forgot. The moon became a symbol of her struggle to become whole, and the title of the book she wrote as an epitaph for herself and her family.

This systematically organized and well-balanced book compresses within the covers of a single volume the theoretical principles and techniques involved in bio-separations, also called downstream processing. These techniques are derived from a range of subjects, for example, physical chemistry, analytical chemistry, bio-chemistry, biological science and chemical engineering. Organized in its 15 chapters, the text covers in the first few chapters topics related to chemical engineering unit operations such as filtration, centrifugation, adsorption, extraction and membrane separation as applied to bioseparations. The use of chromatography as practiced at laboratory as well as industrial scale operation and related techniques such as gel filtration, affinity and pseudoaffinity chromatography, ion-exchange chromatography, electrophoresis and related methods have been discussed. The important applications of these techniques have also been highlighted.
