in all its offensiveness. Neither an exhaustive commentary nor a work of historical-exegetical analysis, Apocalypse is a provocative, independent interpretation. Ellul seeks to rescue Revelation from the reassuring and orthodox banality to which commentators often reduce it. The goal is to perceive the totality of the book in its movement and structure. "Architecture in movement" is the key to understanding Revelation's puzzling but simple message. This edition also comes with a new foreword by Jacob Marques Rollison who provides an essential aid for guiding readers through Ellul's thorough engagement with Revelation.

In this work, the authors present a global perspective on the methods available for analysis and design of

BONUS: This edition contains an excerpt from Tom Piccirilli's *The Last Kind Words*. Two years ago Shad Jenkins went to prison for assaulting his sister's attacker. Now he has returned to the southern mountain town of Moon Run Hollow, only to find that Megan is dead. No one knows how she died—or why she was found on Gospel Trail Road, a dirt path leading up to the gorge high above the Chatalaha River, where victims of yellow fever were once brought to die. Navigating a world filled with abnormal children and clandestine snake handlers, one that is slowly

From another, it shows the triumph of abstract spaces: topological spaces, Banach and Hilbert spaces, measure spaces, Riesz spaces, Polish spaces, locally convex spaces, Fréchet spaces, Schwartz space, and spaces. Finally it is the study of big techniques, including the Fourier series and transform, dual spaces, the Baire category, fixed point theorems, probability ideas, and Hausdorff dimension. Applications include the constructions of nowhere differentiable functions, Brownian motion, space-filling curves, solutions of the moment problem, Haar measure, and equilibrium measures in potential theory. undercurrents of violence, anguish and love, A.L. Kennedy examines the nature of the individual, both in isolation and society, as characters define and deny their chosen identities. While showing us the unlikeliness of intimacy and the impossibility of communication, Kennedy also reveals the subversive liberation of impotence, the humour of discomfort as human beings chafe together, the crazed claustrophobia of the family and the wildly funny results of an eccentricity unleashed. The impolite truth nobody mentions in college commencement speeches: "Many of you have just spent four years and a small fortune studying something you will never use, and, if you do, you won't like all that much.

The feminist campaign against pornography, the furor over a racial epithet in the O. J. Simpson trial, and Iran's continuing threat to kill Salman Rushdie exemplify the intense passions aroused by hurtful speech. Richard Abel offers an original framework for understanding and attempting to resolve these

pervasive and intractable conflicts. Drawing on sociological theories of symbolic politics, he views such confrontations as struggles for respect among status categories defined by nationality, religion, race, gender, sexual orientation, and physical difference. Abel convincingly exposes the inadequacies of the conventional responses to speech: absolutist civil libertarianism and enthusiastic state regulation. Instead, he argues, only apologies exchanged within the

communities that construct collective identities can readjust social standing damaged by hurtful words and images. In recasting the problem in terms of equalizing cultural capital, Abel opens a new pathway through the wrongs and rights of speech.

Many times the practical details of analyzing numerical TL glow curves and of applying the theoretical models are difficult to find in the published literature. The purpose of this book is to provide a practical guide for both established researchers and for new graduate students entering the field of TL and is intended to be used in conjunction with and as a practical supplement of standard textbooks in the field. Chapter 1 lays the mathematical groundwork for subsequent chapters by presenting

he fundamental mathematical expressions most commonly used for analyzing experimental TL data. Chapter 2 presents comprehensive examples of TL data analysis for glow curves following first-, second-, and general-order kinetics. Detailed analysis of numerical data is presented by using a variety of methods found in the TL literature, with particular emphasis in the practical aspects and pitfalls that researchers may encounter. Special emphasis is placed on the need to use several different methods to analyze the same TL data, as well as

on the necessity to analyze glow curves obtained under different experimental conditions. Unfortunately, the literature contains many published papers that claim a specific kinetic order for a TL peak in a dosimetric material, based only on a peak shape analysis. It is hoped that the detailed examples provided in Chapter 2 will encourage more comprehensive studies of TL properties of materials, based on the simultaneous use of several different methods of analysis.

suffering from administrative overwork and excessive teaching obligations, had asked me to do so. This was generally done with a pile of notes and a dozen slides, and I always regretted that no small, concise, specialized book on nucleic acid structure for students at the senior or beginning graduate level existed. Every year, the lecture notes became more and more voluminous, with some key reprints intermingled. Everything changed when, in the spring of 1973, I received an invitation to teach such a course, under the UNESCO-OAS-Molecular Biology Program at the Universidad de Chile in Santiago during October 1973. I had accepted rather

enthusiastically, but soon discovered that it would be necessary to produce a photocopied syllabus for the students. This was the first premanuscript of this book. For nonscientific reasons, the course was first canceled and then postponed until December 1973. Nearly a year later, the course, in slightly amended form, was presented at the Lomonossov-State University in Moscow.
