Guidelines for Process Safety During Transient Operations offers useful guidance in preparing for the safe startup and shutdown of chemical processes. With an understanding of the risks involved, you can work proactively to prevent fatalities, serious injuries, reduced productivity, and costly damage. This essential guide for plants provides clear examples of how to anticipate and avoid major issues. The book examines safe shutdown procedures in the event of an emergency. You will also gain direction on how to resume operations safely after an unexpected shutdown. The book supports anyone tasked with regulating and overseeing chemical plants and procedures, whether you are an engineer, manager, or government professional. Minimize operating risks through the effective management of transient operations Establish safe start-up and shutdown procedures for chemical processes Be ready to safely shut down processes in the event of an emergency Learn from real world examples of start-up or shutdown incidents Review procedures and engineering controls that help prevent or reduce the effects of incidents involving transient operations Guidelines for Process Safety comes to you from The Center for Chemical Process Safety (CCPS), which offers advanced thinking in the critical area of process safety. Ships operating in the Arctic and Antarctic environments are exposed to a number of unique risks. Poor weather conditions and the relative lack of good charts, communication systems and other navigational aids pose challenges for mariners. The remoteness of the areas makes rescue or clean-up operations difficult and costly. Cold temperatures may reduce the effectiveness of numerous components of the ship, ranging from deck machinery and emergency equipment to sea suction. When ice is present, it can impose additional loads on the hull, propulsion system and appendages. The

Guidelines for ships operating in polar waters aim at mitigating the additional risk imposed on shipping in the harsh environmental and climatic conditions that exist in polar waters. This publication should be of interest to maritime administrations, ship manufacturers, shipping companies, cruise and tour operators, education institutes and others concerned with the safe operation of ships in polar waters.

COVID-19 Considerations in the Deployed Setting (Presentation) - 27 May 2020, 35 pages INTRODUCTION The STANDARD MEDICAL OPERATING GUIDELINES (SMOG) continues to go through significant improvements with each release as a result of the collaboration of Emergency Medicine professionals, experienced Flight Medics, Aeromedical Physician Assistants, Critical Care Nurses, and Flight Surgeons. There has been close coordination in the development of these guidelines by the Joint Trauma System, and the Defense Committees on Trauma. Our shared goal is to ensure the highest quality en route care possible and to standardize care across all evacuation and emergency medical pre-hospital units. It is our vision that all of these enhancements and improvements will advance en route care across the services and the Department of Defense. Unit medical trainers and medical directors should evaluate

Critical Care Flight Paramedics (CCFP) ability to follow and execute the medical instructions herein. These medical guidelines are intended to guide CCFPs and prehospital professionals in the response and management of emergencies and the care and treatment of patients in both garrison and combat theater environments. Unit medical providers are not expected to employ these guidelines blindly. Unit medical providers are expected to manipulate and adjust these guidelines to their unit 's mission and medical air crew training / experience. Medical directors or designated supervising physicians should endorse these guidelines as a baseline, appropriately adjust components as needed, and responsibly manage individual unit medical missions within the scope of practice of their Critical Care Flight Paramedics, Enroute Critical Care Nurses, and advanced practice aeromedical providers. The medication section of this manual is provided for information purposes only. CCFPs may administer medications only as listed in the guidelines unless their medical director (supervising physician) orders a deviation. Other medications may be added, so long as the unit supervising physician and/or medical director approves them. This manual also serves as a reference for physicians providing medical direction and clinical oversight to the CCFP. Treatment direction, which is more appropriate to the patient 's condition than the guideline, should be provided by the physician as long as the CCFP scope of practice is not exceeded. Any medical guideline that is out of date or has been found to cause further harm will be updated or deleted immediately. The Medical Evacuation Concepts and Capabilities Division (MECCD) serves as the managing editor of the SMOG and are responsible for content updates, managing the formal review process, and identifying review committee members for the annual review. The Standard Medical Operating Guidelines are intended to provide medical procedural guidance and is in compliment to other Department of Defense and Department of the Army policies, regulatory and doctrinal guidance. Nothing herein overrides or supersedes laws, rules, regulation or policies of the United States, DoD or DA.

The EPA investigation of a 1994 chemical plant tragedy concluded that "the explosion resulted from a lack of written safe operating procedures..." While good written procedures can't guarantee zero accidents, they can reduce the number of accidents caused by human error. This new book shows how to remedy this problem through selecting and implementing actions that promote safe, efficient operations and maintenance, improve quality, continuity, profitability and cost control, build upon and record process experience, and promote the concept that operating and maintenance procedures are vital plant components. It includes practical samples of procedure formats, checklists and many references.

One of the most common reasons so many new drug, medical device, or equipment applications are rejected each year by the FDA is the failure to properly develop and document plans and procedures. This is required of both U.S. and foreign companies wishing to market their products in the United States. The lack of well defined validation standard operating procedures may result in adverse FDA findings, recalls, and heavy financial losses. Key FDA guidelines on good manufacturing practice (GMP), good laboratory practice (GLP), and validation do not describe exactly how to develop a master validation plan, how to achieve compliance, or the standard operating procedures and documentation required. This text provides the required validation standard operating procedures and documentation necessary for achieving compliance in the pharmaceutical industry. The text and CD are designed to minimize workload and optimize time, money, and resources. A comprehensive when-and-how-to-do-it guide, Validation Standard Operating Procedures provides the needed administrative solutions and guidance for achieving compliance with FDA requirements, and for obtaining authorization to market products in the United States. The CD-ROM contains 74 template validation standard operating procedures that can be tailored to meet the regulatory compliance requirements of any pharmaceutical, diagnostic, medical device, medical equipment, and biotech product. You can edit, print, and customize these procedures to fit your needs. The book and CD work together to minimize the number of documents used and to ensure their accuracy. All critical elements and requirements of validation are covered, so you can easily implement them and avoid the stress that usually accompanies an FDA audit. Features Provides all the information that managers need to establish functions, acceptance criteria, and validation procedures in compliance with FDA guidelines Includes step-by-step directions for translating GMP requirements into action, based on your company's Master Validation Plan and execution protocols Describes how to establish test functions and prevent defects in order to produce products that are fit for use Serves as an ideal companion to Haider's Pharmaceutical Master Validation Plan

The problem was that Tampa Fire Rescue did not have a Standard Operating Guideline for Special Events. The purpose of the research was to identify requirements for the City of Tampa, and methods of other organizations when supporting such events. An action research methodology was utilized to answer the research questions. The literature review and interviews identified how government agencies, fire departments EMS and law enforcement agencies support such requests from their communities. Required regulations were compared to state and local regulations. Recommendations were made to enhance the support and operations of special events within the City of Tampa. Recommendations were made to establish a standard operating guideline for enhanced medical service delivery and overall public safety at special events.
