academics and policy-makers. The widespread use of information technologies is challenging traditional business models and reshaping socio-economic paradigms, as well as promoting new social relations, jobs and working structures. By synthesizing prior research and providing a strong foundation for

future research, the aim of this book is to contribute to our practical and conceptual understanding of the technological, behavioral, organizational, social and economic issues and their inter-relationship in organizations and electronic markets. The book covers five broad aspects: technological innovations and

Policy in Sport Organizations introduces readers to the power and politics of sport organizations. It explores the managerial activities essential to governance and policy development, and it looks at the structure and function of organizations like those with which readers will interact in the workplace. It also demonstrates where

the power lies in an organization or industry segment and how individual sport organizations fit in to the greater industry. Current policy issues and the ethical questions they raise are also addressed. Real-world case studies demonstrate the types of dilemmas that sport managers face every day. In addition, professional

alternative perspectives on the theory, research and practice of public administration, avoiding assumptions of traditional theory-building. The contributors explain both how ongoing non-linear interactions result in macro patterns
