neither a

nor it can be treated as a manual on any of these comprehensive topics, but, it surely lays a solid foundation that helps building both static and dynamic websites. With uncountable sites and freely available material, I wrote this book due to the following reasons:*

The website project is divided into two parts: static and dynamic. In the static part, you'll create web pages that remain unchanged and deliver static content whenever they are accessed. In contrast, the dynamic part will teach you how to create pages that access fresh content from a database. This

part comprises an E-Commerce module that allows visitors to purchase products online, a Newsletter subscription module to subscribe to company's newsletters, and Contact Form module which will be provided to interact with site visitors. The E-commerce application

into two major parts:

Admin and Member
interfaces. In the
Admin part you will
undergo five tasks:

Member part
comprises eight tasks:
