Kingdom of Lies

Oracle Financials Handbook
Instructions on Budget Execution
Mapping Globalization

"Kingdom of Lies is a brilliant and bold debut, as full of suspense as the best crime thrillers." —Linda Fairstein, New York Times bestselling author of Blood Oath In the tradition of Michael Lewis and Tom Wolfe, a fascinating and frightening behind-the-scenes look at the interconnected cultures of hackers, security specialists, and law enforcement A 19-year-old Romanian student stumbles into a criminal ransomware ring in her village. Soon she is extorting Silicon Valley billionaires for millions--without knowing the first thing about computers. A veteran cybersecurity specialist has built a deep network of top notch hackers in one of the world's largest banks. But then the bank brings in a cadre of ex-military personnel to "help." A cynical Russian only leaves his tiny New Jersey apartment to hack sports cars at a high performance shop in Newark. But he opens his door to a consultant who needs his help. A hotel doorman in China once served in the People's Army, stealing intellectual property from American companies. Now he uses his skills to build up a private side-business selling the data he takes from travelers to Shanghai's commercial center. Kingdom of Lies follows the intertwined stories of cybercriminals and ethical hackers as they jump from criminal trend to criminal trend, crisis to crisis. A cybersecurity professional turned journalist, Kate Fazzini illuminates the many lies companies and governments tell us about our security, the lies criminals tell to get ahead, and the lies security leaders tell to make us think they are better at their jobs than they are. Like Traffic set in the cybercrime world, Kingdom of Lies is as entertaining as it is eye opening.

"A required read for every university administrator grappling with the complexities of technology and education. Bates has combined an impressive depth of experience and practice to produce an authoritative and well-reasoned approach."--Bruce Pennycook, vice-principal, Information Systems and Technology, McGill University

"Digital technologies are revolutionizing the practices of teaching and learning at colleges and universities all around the world. This book will be helpful for all those who are planning and managing such organizational and technological change on their campuses."--Timothy W. Luke, executive director, Institute for Distance and Distributed Learning, Virginia Tech

Implementing new technology at a college or university requires more than simply buying new computers and establishing a Web site. The successful use of technology for teaching and learning also demands major changes in teaching and organizational culture. In *Managing Technological Change*, Tony Bates -- a world-renowned expert on the use of technology in university teaching -- reveals how to create the new, technologically competitive academic organization. He draws from recent research and best practice case studies -- as well as on his thirty years of experience in using technology for teaching -- to provide practical strategies for managing change to ensure the successful use of technology. Readers will learn how to

win faculty support for teaching with technology and get advice on appropriate decision-making and reporting structures. Other topics covered include reward systems, estimating costs of teaching by technology, and copyright issues. Bates also details the essential procedures for funding new technology-based systems, managing the technology, and monitoring its ongoing educational effectiveness in anticipation of future changes. Throughout the book, he maintains a focus on the human factors that must be addressed, identifying the risks and penalties of technologically based teaching and showing how to manage those hazards.

computer programming language. Yes, it is obsolete but all MS Office products include VBA (Visual Basic for Application) and if you learn VB you will know VBA! In my tutorial, I used VB 6 to explain step by step how to create a simple Visual Basic Application and a relatively complex one (a Patient Management system) that is using a database. A patient Management application source code is explained in details. You will learn how to design and create a database in MS Access and how to create tables and queries. The book includes a sample application that shows how to use Windows API function. You will learn how to convert VB program that can be run only in Visual Basic development environment to a distributable application that can be installed on any client computer. For illustration, I included more than 100 screenshot images and links to a video. You will be able to download from my website complete source code for 7 Visual Basic projects including a Password Keeper, a Patient Management and a Billing Management application. Modern society is full of linked contracts. Linked contracts, in the broadest sense of the word, can be defined as a plurality of separately concluded contracts that are somehow interrelated. However, contract law is still primarily centered on traditional contractual relations between (just) two parties. This book explores the legal consequences of the existence of linked contracts and provides insights for practice and academia within this new phenomenon. Several examples of linked contracts are covered, including: purchase financing, which consists of a sales contract and a credit contract financing the

purchase (Part I) * cartel agreements, which consist of a framework contract and subsequent contracts to execute the framework contract (Part II) * linked contracts concluded within the framework of a construction project (Part III) * a chain of sales contracts between a producer and consumer or end user (Part IV). The book concludes with an analysis of the provisions on linked contracts in the Draft Common Frame of Reference, the Consumer Rights Directive, the Draft Optional Instrument, and a preliminary approach for a general regulation of the concept of linked contracts. The book is the result of the fruitful collaboration within the research program Contract Law and Law of Obligations in general of the Ius Commune Research School (www.iuscommune.eu). "Linked Contracts" was the theme of the workshop on contract law during the 15th Ius Commune Conference in Leuven. (Series: Ius Commune Europaeum - Vol. 103)
