Preparing for the Occupational Therapy National Board Exam: 45 Days and Counting, Second Edition is a comprehensive overview for occupational therapist students preparing to take the National Board for Certification in Occupational Therapy (NBCOT) OTR exam. It utilizes a well-received health and wellness focus and includes tips and self-assessment forms to develop effective study habits. Unlike other OTR examination review guides, this text chooses to provide a more structured and holistic approach, including a detailed calendar and plan of study for the 45 days leading up to the exam. Occupational therapy practitioners and other clinicians

understand the importance of accurately evaluating a client's ability to accomplish necessary everyday tasks, especially those in the community setting. The Test of Grocery Shopping Skills is a new performance-based assessment that measures how accurately and efficiently clients can locate items in a grocery store. Developed primarily to assess individuals with serious mental illness, this assessment also is ideal for use with other populations in which cognitive impairments could interfere with community living skills, such as persons with brain injury, stroke, dementia, or developmental disabilities. The manual clearly discusses how to administer the test and to score and interpret results. Two different but statistically comparable pre and post-test forms allow practitioners to measure changes in clients' abilities. This user-friendly assessment also includes

instructions for the test administrator and test taker, score sheets, grocery lists, and a sample store map and answer sheet—all of which are available on the enclosed CD-ROM for easy use with clients and also in the classroom.

Nearly 400 instruments are reviewed in this third edition of Occupational Therapy Assessment Tools, including many developed by occupational therapists. An international team of academicians, clinicians, researchers, and advanced-degree candidates working in various practice arenas collaborated on this update. The assessment profiles--which include title, authors, format, purpose, population, time required to administer, setting or position, materials or tools, brief description, interpretation, reliability and validity, source, additional references, cost, and ample-- will be useful to

clinicians and students, who must choose appropriate tools for clinical practice; to educators, who select assessment procedures for the classroom; and to researchers, who will find instruments that are designed for research purposes or will benefit from further investigation. Another major change in this new edition is the incorporation of the language, terminology, and organization of the Occupational Therapy Practice Framework. Other improvements include a matrix of all assessments, showing content areas and age ranges of each instrument. Most exciting is the accompanying searchable CD-ROM, which offers readers quick, easy access to the entire text. -- Publisher's website

Insurance (SSDI) and Supplemental Security Income (SSI) programs. To receive SSDI or SSI disability benefits, an individual must meet the statutory definition of disability, which is "the inability to engage in any substantial gainful activity [SGA] by reason of any medically determinable physical or mental impairment which can be expected to result in death or which has lasted or can be expected to last for a continuous period of not less than 12 months." SSA uses a five-step sequential process to determine whether an adult applicant meets this definition. Functional Assessment for Adults with Disabilities examines ways to collect information about an individual's physical and mental (cognitive and noncognitive) functional abilities relevant to work requirements. This report discusses the types of information that support findings of

Evaluation, which promotes a greater understanding of the people occupational therapy serves, is the foundation of occupational therapy practice and provides evidence to guide "best practices." This new edition of the classic text focuses on the role of the occupational therapist as an evaluator with assessment support provided by the occupational therapy assistant. Chapters discuss the various aspects of a comprehensive evaluation, including screening, evaluation, reassessment, and re-

evaluation, and reaffirm the importance of understanding people as occupational beings. The expansion of this revision reflects contemporary evaluation approaches. Most importantly, the authors discuss the influence that evaluation practices have on practice and remind readers to think about not only what the current practice environment wants an evaluation to be but also what the profession believes a comprehensive evaluation should be.

In an uncertain economy, many students of

higher education are drawn to the security of careers in health care, such as Occupational Therapy (OT). It is important that as admissions committees evaluate an increasing applicant pool they select students who will be successful in the programs and therefore maximize the number of graduates into the professions. Some health care admissions programs look only at the applicant's grade point average (GPA) and/or results of standardized tests such as the Graduate Records Exam (GRE). There is a gap

Download Free Ot Standardized Tests

in the literature in regard to how to select students who have traits linked to successful clinical performance and professionalism. This research attempts to evaluate an admissions procedure to measure these traits or non-cognitive variables as they relate to professionalism for OT and possibly other health care fields. The key research question was: To what degree is the Grapczynski Admissions Profile (GAP) a valid and reliable tool for selecting successful OT students? The theoretical foundations of this study include

Download Free Ot Standardized Tests

the theory developed by Grapczynski and Kane (1990) that identified five core areas for the field to be professionalized, and the Parsons Thompson Model (Thompson, 1976), which provides a framework for understanding the organizational levels that influence the admission process. The results of the study included a moderately high degree of face validity and moderately high agreement between the reliability raters for the Research component of the GAP. The qualitative data gave support for most of the core areas of the

GAP related to professionalism in the field of OT. This qualitative data also included suggestions for improvement of the GAP. With this information, improvements can be made to the GAP and additional research can be done from this base with the hope of further improving validity and reliability of this admissions tool.

Occupational Therapy Evaluation for Children

This textbook on assessment and outcome measurement is

written for both occupational therapy and physiotherapy students and qualified therapists. It begins by defining what is meant by assessment, outcome, evaluation and measurement and discussing the complexity of therapy assessment and measurement, including the challenge of measuring human behaviour and the impact of factors such as task demand and context, including the environment. Methods of data collection (e.g. observation, interview, standardised testing) and sources (e.g. self-report, proxy) for collecting information about clients are then reviewed, and the main purposes of assessment (e.g. descriptive, evaluative, predictive, discriminative) presented. The book then addresses the topics of standardisation, levels of measurement, reliability, validity and clinical utility. There is a

chapter describing and applying models for categorizing levels of function to aid assessment and measurement. The concept of clinical reasoning and reflective practice is then explored. Application of principles is supported through detailed case studies and worksheets and the criteria for test critique and guidelines for choosing a particular assessment approach are discussed.

This book is both an introductory text to the rehabilitation of stroke for student therapists and a reference text for qualified therapists. The layout of the book reflects these needs with Chapters 1-4 assuming a minimal level of understanding of the material. These chapters provide an introduction to the condition of stroke itself, the problem therapists face in assessing and treating stroke patients and therapeutic

approaches in occupational therapy. Prognosis of stroke is also discussed which is an issue taken up in later chapters concerned with expert systems. The use of microcomputers in occupational therapy is discussed throughout the book with particular reference to their direct role during therapy.

Chapters 5-7 assume a higher level of understanding from the reader although students will find the material useful as an insight into the work of the modern-day therapist. Chapter 5 addresses the work carried out in the area of biofeedback; Chapter 6 introduces the concept and uses of databases, and Chapter 7 discusses the versatility of microcomputers, especially in the provision of expert systems for the prognosis of stroke.

Occupational therapy is an allied health profession with an underlying belief that engaging in occupations promotes both health and wellness. This comprehensive text lays the foundation for occupation-based practice and addresses the contextual issues of working within the acute care setting. The chapters help to demystify medical conditions and issues routinely encountered by occupational therapists working in this practice area. Detailed research covers the importance of

occupational therapists' knowledge of how diseases affect the human body, including the cardiovascular, nervous, and endocrine systems. Chapters review the evaluation process, including chart review, measures, and interpretations and recommendations for intervention to ensure the ultimate level of independence for each patient.
