The authors found that for the average adult beneficiary, costs to the government were 9 percent higher with CRI. Compared to the non-CRI program, costs were 57 percent higher for Prime enrollees, whereas they were the same for non-enrollees. Prime enrollees' use of outpatient care accounted for almost all of the utilization increase in CRI. Active-duty spouses who enrolled did not change their military treatment facility (MTF) use, but they were more likely to augment their (MTF) care with civilian care. Retired enrollees were more likely to use both MTF care and civilian care. CHAMPUS inpatient utilization was lower in CRI, as is often the case in managed-care programs, whereas use of MTF inpatient services did not change significantly. These findings suggest that CRI was able to increase access, especially to civilian care, with an accompanying increase in costs. The evidence points to high utilization among Prime enrollees, especially for retired beneficiaries.

A Practical Guide to Strategies and Solutions

Kinn's The Administrative Medical Assistant - E-Book

According to Transforming Health Care Scheduling and Access, long waits for treatment are a function of the disjointed manner in which most health systems have evolved to accommodate the needs and the desires of doctors and administrators, rather than those of patients. The result is a health care system that deploys its most valuable resource--highly trained personnel--inefficiently, leading to an unnecessary imbalance between the demand for appointments and the supply of open appointments. This study makes the case that by using the techniques of systems engineering, new approaches to management, and increased patient and family involvement, the current health care system can move forward to one with greater focus on the preferences of patients to provide convenient, efficient, and excellent health care without the need for costly investment. Transforming Health Care Scheduling and Access identifies best practices for making significant improvements in access and system-level change. This report makes recommendations for principles and practices to improve access by promoting efficient scheduling. This study will be a valuable resource for practitioners to progress toward a more patient-focused "How can we help you today?" culture.
