

## *Oxford Textbook Of Palliative Nursing*

Effective palliative care that rests on a sound ethical foundation requires ongoing discussions about patient and family values and preferences. This is especially important when addressing care at end-of-life including artificial nutrition and hydration, withdrawal of life-sustaining therapies and palliative sedation as well as requests for assistance in hastening death. The eighth volume in the HPNA Palliative Nursing Manuals series, *Legal and Ethical Aspects of Palliative Care*, provides an overview of critical communication skills and formal organizational mechanisms, such as ethics committees and interdisciplinary rounds, required for decisions in ethical dilemmas which respect diversity in the views of colleagues, as well as patients. The content of the concise, clinically focused volumes in the HPNA Palliative Nursing Manuals series is one resource for nurses preparing for specialty certification exams and provides a quick-reference in daily practice.

Over the past two decades there has been a marked change in global age demographics, with the number of over-60s increasing by 82% and the number of centenarians by 715%. This new-found longevity is testament to the success of recent advances in medicine, but poses significant challenges to multiple areas of health care concerning older patients. Building upon its predecessor's reputation as the definitive resource on the subject, this new edition of the *Oxford Textbook of Geriatric Medicine* offers a comprehensive and multinational examination of the field. Fully revised to reflect the current state of geriatric medicine, it examines the medical and scientific basis of clinical issues, as well as the ethical, legal, and socio-economic concerns for healthcare policy and systems. Over 170 chapters are broken up into 16 key sections, covering topics ranging from policy and key concepts through to infection, cancer, palliative medicine, and healthy ageing. New material includes focus on the evolving concepts of malnutrition, sarcopenia, frailty, and related geriatric syndromes and integration of geriatric principles from public health, primary and specialized care, and transitional stages from home to emergency, medicine and surgery, rehabilitation, and long term care. The *Oxford Textbook of Geriatric Medicine* brings together specialists from across the globe to provide every physician involved in the care of older patients with a comprehensive resource on all the clinical problems they are likely to encounter, as well as on related psychological, philosophical, and social issues.

Through an exploration of the ethical nature of nursing, *Caring Matters Most* asserts that the act of nursing itself embodies goodness. Nurses can develop this moral character in themselves by cultivating five habits: trustworthiness, imagination, beauty, space, and presence. Practicing these habits will sustain nurses as they meet the challenges of the workplace, the threat of automation, and the incivilities that arise within the nursing community. The volume concludes with thought-provoking discussion questions and exercises designed to help nurses apply concepts in the classroom or in practice. Each chapter combines highly readable explanations of moral theory with real-life examples that can guide nurses in day-to-day practice. *Caring*

**Textbook of Palliative Care is a comprehensive, clinically relevant and state-of-the art book, aimed at advancing palliative care as a science, a clinical practice and as an art. Palliative care has been part of healthcare for over fifty years but we still find ourselves having to explain its nature and practice to colleagues and to the public in general. Healthcare education and training has been slow to recognize the vital importance of ensuring that all practitioners have a good understanding of what is involved in the care of people with serious or advanced illnesses and their families. However, the science of palliative care is advancing and our understanding concerning many aspects of palliative care is developing rapidly. The book is divided into separate sections for ease of use. Over 100 chapters written by experts in their given fields provide up-to-date information on a wide range of topics of relevance to those providing care towards the end of life no matter what the disease may be. We present a global perspective on contemporary and classic issues in palliative care with authors from a wide range of disciplines involved in this essential aspect of care. The Textbook includes sections addressing aspects such as symptom management and care provision, organization of care in different settings, care in specific disease groups, palliative care emergencies, ethics, public health approaches and research in palliative care. This Textbook will be of value to practitioners in all disciplines and professions where the care of people approaching death is important, specialists as well as non-specialists, in any setting where people with serious advanced illnesses are residing. It is also an important resource for researchers, policy-and decision-makers at national or regional levels. Neither the science nor the art of palliative care will stand still so we aim to keep this Textbook updated as the authors find new evidence and approaches to care.**

**Communication in Palliative Nursing unites complementary work in communication studies and nursing research to present a theoretically grounded curriculum for teaching palliative care communication to nurses. The chapters outline the COMFORT curriculum, comprised of these elements: Communication, Orientation and opportunity, Mindful presence, Family, Openings, Relating, and Team communication. Central to this curriculum is the need for nurses to practice self-care. Based on a narrative approach to communication, which addresses communication skills development holistically, this volume teaches nurses to consider a holistic model of communication that aligns with the holistic nature of palliative care.**

**This work moves beyond the traditional and singular view of the nurse as patient and family teacher, to embrace more complex communication challenges present in palliative care -- namely, providing care and comfort through communication at a time when patients, families, and nurses themselves are suffering. In addition to collaborating with physicians, the nurse's role involves speaking with patients and families after they have received bad news and often extends to discussions of spiritual and religious concerns. This book covers communication theory, clinical tools, and teaching resources to help nurses enhance their own communication and create comfort for themselves, as well as for patients and their families.**

**Now in paperback, the Oxford Textbook of Oncology reflects current best practice in the multidisciplinary management of cancer, written and edited by internationally recognised leaders in the field. Structured in six sections, the book provides an accessible scientific basis to the key topics of oncology, examining how cancer cells grow and function, as well as discussing the aetiology of cancer, and the general principles governing modern approaches to oncology treatment. The book examines the challenges presented by the treatment of cancer on a larger scale within population groups, and the importance of recognising and supporting the needs of individual patients, both during and after treatment. A series of disease-oriented, case-based chapters, ranging from acute leukaemia to colon cancer, highlight the various approaches available for managing the cancer patient, including the translational application of cancer science in order to personalise treatment. The advice imparted in these cases has relevance worldwide, and reflects a modern approach to cancer care. The Oxford Textbook of Oncology provides a comprehensive account of the multiple aspects of best practice in the discipline, making it an indispensable resource for oncologists of all grades and subspecialty interests.**

**Written by an international team of authors the Oxford Textbook of Communication in Oncology and Palliative Care integrates clinical wisdom with empirical findings. It draws upon the history of communication science, providing the reader with a comprehensive curriculum for applied communication skills training. An essential resource, the Oxford Textbook of Communication in Oncology and Palliative Care is filled with tips and strategies for effective communication about difficult and challenging communication. In focusing on cancer and the end-of-life, it deals with the existential and spiritual challenges found across all of medicine, providing deep insights into what is at stake and how clinicians might optimally respond. This authoritative and wide-ranging book provides clinicians with state-of-the-art and evidence-based guidelines to achieve effective, patient-centred communication in the clinical settings of oncology and palliative care. Thoroughly revised and updated, this new edition includes sections on the curriculum for nurses, the core curriculum, and an introductory section on communication science. The chapters embrace specialty issues across the clinical disciplines, from enrolling in clinical trials, working in teams, and discussing genetic risk, to talking about sexuality, infertility, and intercultural issues. An educational perspective is also provided, with chapters covering communication skills training, how to evaluate courses, and international**

**The growing geriatric population in the United States has created an increasing need for palliative medicine services across the range of medical and surgical specialties. Yet, palliative medicine lacks the resources to carry such a workload itself. Geriatric Palliative Care addresses this need by encouraging individual specialties to "own" the management of elderly with the same vigor as they "own" other key management competencies within their specialty. This clinically focused and highly practical handbook, which compliments the more comprehensive text Geriatric Palliative Care by Sean Morrison and Diane Meier (Oxford University Press, 2003), encourages this process of learning and ownership across many medical specialties. Designed to be readable and easily accessible to a range of health care providers, Geriatric Palliative Care outlines specific strategies for caring for specific palliative care issues common in elderly patients. The handbook also provides evidence based advice for helping patients, relatives, and staff cope with such issues as polypharmacy, dementia and consent, multiple pathologies, home care, elderly caregivers, and supporting the elderly in the place where they would like to be.**

"This 5th edition is an important achievement; it is a symbol of commitment to the field of palliative nursing, where we have been and where we are going." - Betty Rolling Ferrell, PhD, MA, FAAN, FPCN, CHPN  
From the Foreword The aging population has only grown since the first edition of this comprehensive and seminal publication nearly 20 years ago. Based on the need to humanize rather than medicalize the illness experience for patients, this text delves into palliative care beyond the specific diseases affecting the patient. Instead, content focuses on the whole person and family. Palliative patients struggle with chronic, debilitating, and painful conditions, and grapple with the fact that life as they knew it has already passed away. Families and friends reciprocally suffer, not knowing how to help and therefore become the secondary victims of the disease. This is not the challenge of a lone nurse, or a single physician, therapist, or social worker. Rather, palliative and hospice care requires the expertise and unique roles of an interprofessional team to help the patient and family strengthen their resilience, continue to find meaning and purpose in life, and cure what can be cured. Palliative Care Nursing, Fifth Edition, delivers advanced empirical, aesthetic, ethical and personal knowledge. This new edition brings an increased focus on outcomes, benchmarking progress, and goals of care. It expounds upon the importance of the cross-disciplinary collaboration introduced in the previous edition. Every

chapter in Sections I, II, and III includes content written by a non-nursing member of the interprofessional team. Based on best-evidence and clinical practice guidelines, this text presents comprehensive, targeted interventions responsive to the needs of palliative and hospice patients and family. Each chapter contains compassionate, timely, appropriate, and cost-effective care for diverse populations across the illness trajectory. Key Features The expanded new edition offers current, comprehensive, one-stop source of highly-relevant clinical information on palliative care Life-span approach: age-appropriate nursing considerations (e.g. geriatric, pediatric and family) Includes disease-specific and symptom-specific nursing management chapters Promotes a holistic and interdisciplinary approach to palliative care Offers important legal, ethical and cultural considerations related to death and dying Case Studies with Case Study Conclusion in each clinical chapter New to The Fifth Edition: An expanded chapter on Palliative Care incorporates most up to date scope and standards, information on Basic and Advanced HPNA certification, self-reflection and self-care for nurses. A chapter on Interprofessional Collaboration Instructor Resources: Power points and Test bank

Pediatric palliative care is a field of significant growth as health care systems recognize the benefits of palliative care in areas such as neonatal intensive care, pediatric ICU, and chronic pediatric illnesses. Pediatric Palliative Care, the fourth volume in the HPNA Palliative Nursing Manuals series, highlights key issues related to the field. Chapters address pediatric hospice, symptom management, pediatric pain, the neonatal intensive care unit, transitioning goals of care between the emergency department and intensive care unit, and grief and bereavement in pediatric palliative care. The content of the concise, clinically focused volumes in the HPNA Palliative Nursing Manuals series is one resource for nurses preparing for specialty certification exams and provides a quick-reference in daily practice. Plentiful tables and patient teaching points make these volumes useful resources for nurses.

"Content for this series was derived primarily from the Oxford Textbook of Palliative Nursing (4th edition, 2015), edited by Betty R. Ferrell, Nessa Coyle, Judith A. Paice. The Textbook contains more extensive content and references so users of this Palliative Nursing Manual are encouraged to use the Textbook as an additional resource."--Preface.

The definitive Oxford Textbook of Palliative Medicine, now in its fifth edition, has again been thoroughly updated to offer a truly global perspective in this field of extraordinary talent and thoughtfulness. Updated to include new sections devoted to assessment tools, care of patients with cancer, and the management of issues in the very young and the very old, this leading textbook covers all the new and emerging topics since its original publication in 1993. In addition, the multi-disciplinary nature of palliative care is emphasized throughout the book, covering areas from ethical and communication issues, the treatment of symptoms and the management of pain. The printed book is complemented with 12 months free access to the online version, which includes expanded chapter

information and links from the references to primary research journal articles, ensuring this edition continues to be at the forefront of palliative medicine. This fifth edition of the Oxford Textbook of Palliative Medicine is dedicated to the memory of Professor Geoffrey Hanks, pioneer in the field of palliative medicine, and co-editor of the previous four editions. A truly comprehensive text, no hospital, hospice, palliative care service, or medical library should be without this essential source of information.

Physical Aspects of Care

Communication in Palliative Nursing

The Oxford Textbook of Palliative Nursing remains the most comprehensive treatise on the art and science of palliative care nursing available. Dr. Betty Rolling Ferrell and Dr. Judith A. Paice have invited 162 nursing experts to contribute 76 chapters addressing the physical, psychological, social, and spiritual needs pertinent to the successful palliative care team. Organized within 7 Sections, this new edition covers the gamut of principles of care: from the time of initial diagnosis of a serious illness to the end of a patient's life and beyond. This fifth edition features several new chapters, including chapters on advance care planning, organ donation, self-care, global palliative care, and the ethos of palliative nursing. Each chapter is rich with tables and figures, case examples for improved learning, and a strong evidence-based practice to support the highest quality of care. The book offers a valuable and practical resource for students and clinicians across all settings of care. The content is relevant for specialty hospice agencies and palliative care programs, as well as generalist knowledge for schools of nursing, oncology, critical care, and pediatric. Developed with the intention of emphasizing the need to extend palliative care beyond the specialty to be integrated in all settings and by all clinicians caring for the seriously ill, this new edition will continue to serve as the cornerstone of palliative care education.

Comprehensive in scope and definitive in authority, this second edition has been thoroughly updated to cover new practices, current epidemiological data and the evolving models that support the delivery of palliative medicine to children. This book is an essential resource for anyone who works with children worldwide.

The Oxford Textbook of Palliative Social Work is a comprehensive, evidence-informed text that addresses the needs of professionals who provide interdisciplinary, culturally sensitive, biopsychosocial-spiritual care for patients and families living with life-threatening illness. Social workers from diverse settings will benefit from its international scope and wealth of patient and family narratives. Unique to this scholarly text is its emphasis on the collaborative nature inherent in

palliative care. This definitive resource is edited by two leading palliative social work pioneers who bring together an array of international authors who provide clinicians, researchers, policy-makers, and academics with a broad range of content to enrich the guidelines recommended by the National Consensus Project for Quality Palliative Care.

***Textbook of Palliative Medicine provides an alternative, truly international approach to this rapidly growing specialty. This textbook fills a niche with its evidence-based, multi-professional approach and global perspective ensured by the international team of editors and contributing authors. In the absence of an international curriculum for the study of palliative medicine, this textbook provides essential guidance for those both embarking upon a career in palliative medicine or already established in the field, and the structure and content have been constructed very much with this in mind. With an emphasis on providing a service anywhere***

*in the world, including the important issue of palliative care in the developing nations, Textbook of Palliative Medicine offers a genuine alternative to the narrative approach of its competitors, and is an ideal complement to them. It is essential reading for all palliative care physicians in training and in practice, as well as palliative care nurses and other health professionals in the palliative care team*

*Written by an established, comprehensive, multidisciplinary focused, internationally-recognized team, the sixth edition has been fully revised and brought up to date with the inclusion of recent developments in the speciality, to ensure that it retains its reputation as the definitive reference on palliative care.*

*Nursing Care at the End of Life: Palliative Care for Patients and Families explores the deep issues of caring for the dying and suffering. The book is based on the Hospice Family Caregiving Model previously published by the author and focuses on the practice implications of care for the dying. The book is written in a clear and user-friendly style, and is ideal for undergraduate nursing students learning about dying, suffering, and caring for individuals and their families.*

*Have you ever wondered if you calculated your patient's dosage correctly? Against a backdrop of the growing scrutiny of appropriate dosages, this textbook takes a fresh, new approach to helping health professionals strengthen care to and possibly save the lives of patients living with pain. This easy-to-understand and often humorous book is the most comprehensive to-date on opioid calculations for pain management and palliative care. It carefully walks clinicians through a five-step process for performing opioid conversion calculations in the real-world situations they often see. The book has case examples, simple charts and tables, and practice problems throughout on topics such as:· difficult conversions for methadone, fentanyl, PCA, and neuraxial opioid therapy· conversions between routes and dosage formulations of the same opioids and different opioids· titrating opioid dosages up and down to include dosage change and timing· calculating doses for rescue opioid therapy* Written by pain management expert Dr. Mary Lynn McPherson, the book gives helpful tips that practitioners should incorporate into their practices. It is a must for clinicians at all levels: hospice and palliative care physicians, physician's assistants, nurses, nurse practitioners, and pharmacists. Clinicians will come away with more confidence in doing the calculations, and higher service levels from the improvement in care.

*The Textbook of Palliative Care Communication is the authoritative text on communication in palliative care, providing a compilation of international and interdisciplinary perspectives. The volume was uniquely developed by an interdisciplinary editorial team to address an array of providers including physicians, nurses, social workers, and chaplains, and unites clinicians with academic researchers interested in the study of communication. By featuring practical conversation and curriculum tools stemming from research, this text integrates scholarship and inquiry into translatable content that others can use to improve their practice, teach skills to others, and engage in patient-centered communication. The volume begins by defining communication, explicating debatable issues in research, and highlighting specific approaches to studying communication in a palliative care context. Chapters focus on health literacy and cultural communication, patient and family communication, barriers and approaches to discussing palliative care with specific patient populations, discussing pain, life support, advance care planning, and quality of life topics such as sexuality, spirituality, hope, and grief. Team communication in various care settings is outlined and current research and education for healthcare professionals are summarized. Unique to this volume are chapters on conducting communication research, both qualitatively and quantitatively, to promote further research in palliative care.*

*An on-the-go reference for hospice nurses and those interested in end-of-life care, this practical guide covers the essential elements in the compassionate and holistic care of terminally ill patients and their families. Nurses care for patients facing end-of-life issues in every practice specialty and, as the U.S. population continues to age, the need for proficiency in end-of-life skills will become increasingly important. **Fast Facts for the Hospice Nurse: A Concise Guide to End-of-Life Care** is an invaluable resource that provides emotional, administrative, and palliative support, whether in a hospice, long-term care facility, or acute care setting. This vital go-to text clearly and concisely lays out not only how to care for patients facing end-of-life issues, but also how to engage in self-care and cope with occupational stress. Beginning with an overview of hospice care, including its history and philosophy, this book offers a timeline of the growth of the hospice movement in the United States. Subsequent sections include up-to-date information on the clinical responsibilities of the hospice nurse in addressing the physical, psychological, and spiritual needs of terminally ill patients and their families in a culturally sensitive way. This book also outlines the administrative duties of the hospice nurse, including hospice documentation, a review of hospice regulations, and quality management. The closing section focuses on occupational stress in hospice nursing and how to engage in self-care. This text can serve as a useful clinical resource and also as a reference for nurses seeking hospice certification from the Hospice and Palliative Credentialing Center. **Key Features Organized within the context of the scope and standards of practice of the Hospice and Palliative Nurses Association. Accessible and instructive, Palliative Care guides and inspires health social workers to integrate palliative care principles into their current clinical practice. Through the lenses of environmental theory and intersectionality, rich case narratives and diverse practice settings highlight opportunities for social workers to enhance their work, thereby advancing whole-person care in the face of serious illness. The volume also models engagement, assessment, and intervention through key palliative care skills and language. Chapters include questions to concretize ideas and demonstrate real-world application, while case narratives cover a range of settings, diagnoses, and populations. This book is a useful tool for any social worker working with individuals and families navigating complex health care systems.

Packed full of clinical information and practical advice, the Oxford Handbook of Cancer Nursing is a handbook for all cancer nurses. Designed to be used on the ward, in the community, and for studying and revision, it contains expert guidance on all aspects of the nurse's role. At the heart of this handbook is the patient, their family, and the experience of cancer. Information is included on cancer biology, treatment, and the management of different cancers. Written by experienced nurses, it will help you achieve the best possible results for your patients. The book is laid out to enable quick access to precise, targeted information, and covers the vast majority of clinical scenarios.

What can nurses do to support those receiving palliative care? How do you ensure clear communication and maintain patients' and families' preferences? Palliative Care Nursing is essential reading for nursing students, nurses and other health and social care professionals providing supportive and palliative care to those with advanced illness or who are towards the end of life. This third edition of the acclaimed textbook has been extensively revised and examines important research studies, key debates around care and strategies to move palliative care nursing forward. In four sections the book covers key elements of nursing practice towards the end of life:

- Who is the palliative care patient?
- Providing palliative nursing care
- Caring around the time of death
- Challenging issues in palliative care nursing

Leading authors in each of these fields address contemporary issues and explore how to provide high quality person-centred palliative care, encouraging application to practice through exercises case studies. Chapters completely reworked or new for this edition include those on communication, living with uncertainty, bereavement care, the costs of caring, nurses' decision-making and capacity, and palliative care worldwide. The clarity of evidence presented and coverage of a diverse range of topics make this the foundational textbook for all studying palliative care at pre-registration level, postgraduate level or as part of CPD study. With a foreword by last edition editor, Professor Sheila Payne, Lancaster University, UK. "I welcome this third edition of Palliative Care Nursing and congratulations to the new team who have provided us with a dynamic and innovative development of a core text for palliative nursing practice. As the largest workforce in palliative care, and given the changing face of clinical practice for nurses, including increased educational opportunity and expanding roles and responsibilities, this book is timely in its focus on critical issues which frame and scope the reality of palliative care and the nursing contribution to that discipline. The learning exercises, in particular, offer tools for educators and clinicians to reflect on practice and understand new ways of knowing in palliative care. It will be an excellent resource for nursing, both in the UK and Ireland and to the wider international audience, having drawn on the breadth of global nursing expertise to bring this book together. Philip Larkin, Professor of Clinical Nursing (Palliative Care), University College Dublin and Our Lady's Hospice and Care Services, Dublin, Ireland; President, European Association for Palliative Care "This is a book of substance that captures the current status of palliative nursing, including the values and research evidence that underpin it. The changing nature of palliative nursing as an evidence-based specialism is balanced with practical skills and insights from experts, and also considers the needs of those working with, or concerned about, the dying person's well-being. It covers a range of challenging issues as well as drawing on the wisdom of those who actually undertake this work on a daily basis. I hope that students and practitioners from all disciplines will find this a useful resource to understand the art and craft of good palliative nursing." Professor Daniel Kelly, Fellow of the Royal College of Nursing and Royal College of Nursing Chair of Nursing Research, Cardiff University, UK

Now in its third edition, this landmark textbook has become the key resource for all nurses working in the field of palliative care. Edited by renowned nursing experts Betty Ferrell and Nessa Coyle and written by a dynamic team of internationally known authorities in nursing and palliative medicine, the book contains 78 chapters which cover the gamut of the palliative nursing world. The volume's scope is broad to incorporate principles of care from the time of the initial diagnosis of a terminal disease to the end of a patient's life and beyond. This text is distinctively developed to highlight the nurse's vital role as part of an integrated palliative care team. Various care settings are discussed

including the hospital, ICU, home care, and hospice settings. While the book does provide some information on disease and pathophysiology when appropriate, the chapters focus on the practical aspects of nursing care, including symptom assessment, patient teaching, family support, psychosocial aspects of palliation, and spiritual care. All of the chapters have been completely updated and reorganized to incorporate new research and emerging models of care. This updated volume includes over 10 new chapters, including an extensively update section on international models of palliative care. In addition, there are many new ethics discussions covering a range of topics from pediatric palliative care to the withdrawal of life sustaining treatment. The text is authoritative and fully evidence-based, without ever losing sight of the humanity and sensitivity necessary in palliative nursing.

Advanced Practice Palliative Nursing is the first text devoted to advanced practice nursing care of the seriously ill and dying. This comprehensive work addresses all aspects of palliative care including physical, psychological, social, and spiritual needs. Chapters include: symptoms control, serious illness, pediatric palliative care, spiritual and existential issues, issues around the role and function of the advanced practice nurse, reimbursement, and nursing leadership on palliative care teams. Each chapter contains case examples and a strong evidence base to support the highest quality of care. The text is written by leaders in the field and includes authors who have pioneered the role of the advanced practice

in palliative care. This volume offers advanced practice content and practical resources for clinical practice across all settings of care and encompassing all ages, from pediatrics to geriatrics.

The care of patients with advanced and terminal illness can be extremely rewarding but often causes professionals a considerable amount of discomfort. This is especially so when you feel under confident in your abilities to provide a high quality of symptom management and relief of distress and to communicate appropriately with patients. Patients with advanced disease present some of the most challenging ethical, psychological and social issues to clinicians and indeed to society. Patients need us to be knowledgeable, skilful and understanding. The revised and updated new edition of Palliative Care outlines the fundamental principles and facts which will enable you to make a very real difference to your patients and their families. Information is provided in an accessible, user-friendly way and covers a wide range of physical and non-physical symptom management. Multi-professional team work is addressed, as is the role and support of families. There is also a consideration of the dilemmas and decisions that may be encountered by doctors around the end of a patient's life. This practical resource is designed to provoke contemplative professional development, and enhance learning will be essential reading for nursing and medical practitioners and other professionals who support patients in their homes, in care homes, and in hospital.

Using patient case scenarios, it gives students and medical professionals an accessible, evidence-based entryway to gain the skills and knowledge needed to provide high quality palliative and end of life care to patients and their families.

"The first edition of *Communication in Palliative Nursing* was published in 2012 and became the market leader for nurses wanting to learn more about how to improve and teach palliative care communication. For the last 8 years, it has remained the only text solely focused on the vital role of nurses in palliative care. During this time, the COMFORT model was taught to nurses nationwide who brought the curriculum back to their own institutions and taught components of the model to more than 10,000 healthcare providers across the United States (Wittenberg, Ferrell, Goldsmith, Ragan, & Buller, 2017). Numerous journal articles and research studies have been produced to highlight the principle components of the COMFORT model and test its effectiveness among healthcare audiences across a variety of clinical and educational settings. Through this all, as the model was disseminated to clinical audiences of bedside nurses, nurse leaders, nursing students, and interprofessional learners, feedback was captured about COMFORT. Comments revealed major components of the model that were working and weren't working for the nurses and other healthcare providers who utilized the strategies with patients and families, and began using curriculum tools for teaching and integrating palliative care communication instruction. So, much like the model's grounding in a transactional communication approach, which relies on the co-created interaction between parties, it was clear that the COMFORT model was also ebbing and flowing and had to change. More importantly, palliative care has been growing, changing, expanding, and becoming more sophisticated, more wide-spread! Now more than ever before, palliative care is provided in the home, clinic, or inpatient setting and serves patients who are seriously or chronically ill and their families. It became evident that in order to continue improvements to the model and to keep up with the changing landscape of palliative care and palliative patient populations, a new edition was necessary. Before we highlight the changes, it is never too early to overstate our steadfast commitment to the following principles: We believe that communication research and theory can shape palliative care practices, providing tools for a variety of contexts. We believe that palliative care, offering compassionate, holistic treatment for patients and their families, will not be possible without caring for the entire person (body and mind). We believe that communicating about palliative care must begin at diagnosis of serious illness, not just at end-stages. We believe in a patient-centered approach to communication that emphasizes the role of the family caregiver in the illness trajectory. We believe that intentional communication emphasizing team processes among physicians, nurses, social workers, chaplains, and other healthcare professionals improves palliative care practice. We believe that palliative care should be introduced early in the communication education of all health professionals. We believe that education about palliative care and communication must extend to patients and families who can then advocate for and partner more productively in such services. We believe that communication with the family caregiver is essential for the treatment of pain and symptom management. We believe that frequent conversations are needed across the disease/care trajectory, as patients and families encounter ongoing points of decision-making"--
