This work fills the need for a comprehensive publication in English that deals with the pertinent issues and problems in counseling in the Asia-Pacific region.

Higher education policy has increasingly gained a European dimension, with its own distinct influence over national education policies. Against this background, a major project was launched, the REFLEX project, which aims to make a contribution to assessing the demands that the modern knowledge society places on higher education graduates, and the degree to which higher education institutions in Europe are up to the task of equipping graduates with the competencies needed to meet these demands. The project also looks at how the demands, and graduates' ability to realise them, is influenced by the way in which work is organised in firms and organisations. The REFLEX project has been carried out in sixteen different countries and consisted of a large scale survey among some 70.000 graduates. This report presents the major findings and draws important policy implications.

Global Report Under the Follow-up to the ILO Declaration on Fundamental Principles and Rights at Work

Around 1796, Mr. Malthus, an English gentleman, had finished reading a book that confidently predicted human life would continue to grow richer, more comfortable and more secure, and that nothing could stop the march of progress. He discussed this theme with his son, Thomas, and Thomas ardently disagreed with both his father and the book he had been reading, along with the entire idea of unending human progress. Mr. Malthus suggested that he write down his objections so that they could discuss them point-

by-point. Not long after, Thomas returned with a rather long essay. His father was so impressed that he urged his son to have it published. And so, in 1798, appeared *An Essay on Population*, by British political economist and demographer THOMAS ROBERT MALTHUS (1766-1834). Though it was attacked at the time and ridiculed for many years afterward, it has remained one of the most influential works in the English language on the general checks and balances of the world's population and its necessary control. This is a replica of the 1826 sixth edition. Volume 1 includes: Book I: "Of the Checks to the Population in the Less Civilised Parts of the World and in Past Times" and Book II: "Of the Checks to the Population in the Different States of Modern Europe." Born during the Great Depression and World War Two (1929–1945) an entire generation has slipped between the cracks of history. These Lucky Few became the first American generation smaller than the one before them, and the luckiest generation of Americans ever. As children they experienced the most stable intact parental families in the nation's history. Lucky Few women married earlier than any other generation of the century and helped give birth to the Baby Boom, yet also gained in education compared to earlier generations. Lucky Few men made the greatest gains of the century in schooling, earned veterans benefits like the Greatest Generation but served mostly in peacetime with only a fraction of the casualties, came closest to full employment, and spearheaded the trend toward earlier retirement. Even in retirement/old age the Lucky Few remain in the right place at the right time. Here is their story, and the story of how they have affected other recent generations of Americans before and since.

"Poverty and Social Impact Analysis (PSIA) is an approach used increasingly by governments, civil society organizations, the World Bank, and other development partners to examine the distributional impacts of policy reforms on the well-being of different stakeholders groups, particularly the poor and vulnerable. PSIA has an important role in the elaboration and implementation of

poverty reduction strategies in developing countries because it promotes evidence-based policy choices and fosters debate on policy reform options. Poverty and Social Impact Analysis of Reforms presents a collection of case studies that illustrate the spectrum of sectors and policy reforms to which PSIA can be applied; it also elaborates on the broad range of analytical tools and techniques that can be used for PSIA. The case studies provide examples of the impact that PSIA can have on the design of policy reforms and draw operational lessons for PSIA implementation. The case studies deal largely with policy reforms in a single sector, such as agriculture (crop marketing boards in Malawi and Tanzania and cotton privatization in Tajikistan); energy (mining sector in Romania and oil subsidies in Ghana); utilities (power sector reform in Ghana, Rwanda, and transition economies, and water sector reform in Albania); social sectors (education reform in Mozambique and social welfare reform in Sri Lanka); taxation reform (Nicaragua); as well as macroeconomic modeling (Burkina Faso)."

Microfinance has long been recognized as having significant potential to create jobs and reduce poverty. But to meet the twin challenges of growth and sustainability, managers of microfinance institutions (MFIs) must not only understand essential management functions: they must also be armed with innovative ideas and strategies to succeed in today's increasingly competitive environment.

This book provides a valuable overview of the key management principles necessary to optimize the services of MFIs. Volume 1 examines the markets and marketing of MFIs and captures the different ways that managers can communicate the value of their products and services. It offers strategies to prevent risk from occurring and, if it does occur, explains how to rectify the situation. Practical techniques for allocating costs and determining prices are also highlighted, as well as the importance of plans, budgets and reports. Volume 2 includes chapters on various product options, including savings, insurance, leasing, money transfers, and even grants and nonfinancial services. It also explores how to combine different product menus to serve specific market segments, such as the ultra-poor, youth, women, and small and medium enterprises. It provides specific suggestions to manage diversification, including adapting the institutional culture, redistributing responsibilities, empowering staff, communicating with clients, reengineering systems, and managing change.

By the authors of the bestselling 13th Gen, an incisive, in-depth examination of the Millennials--the

generation born after 1982. In this remarkable account, certain to stir the interest of educators, counselors, parents, and people in all types of business as well as young people themselves, Neil Howe and William Strauss provide the definitive analysis of a powerful generation: the Millennials. Having looked at oceans of data, taken their own polls, talked to hundreds of kids, parents, and teachers, and reflected on the rhythms of history, Howe and Strauss explain how Millennials have turned out to be so dramatically different from Xers and boomers. Millennials Rising provides a fascinating narrative of America's next great generation.

Presents a recommended methodological framework for a tourism satellite account for national accounts made by a working group having the participation of the Statistical Office of the European Communities, the Organisation for Economic Cooperation and Development and the World Tourism Organisation.

As the world's largest industry, tourism has the potential to bring about substantial environmental and socio-economic improvements. This document translates Agenda 21 into a programme of action for the industry. Helping others to make occupational choices requires a combination of skill and a deep understanding of the world of work as it is today and will be in the future. Unlike texts that focus only on skill, Careers Guidance in Context is designed to develop understanding of the factors that shape both the labour market, and careers guidance as an occupation in itself. Careers Guidance in Context re-evaluates the concept of 'a career' in the light of economic restructuring, globalization and the growth of information technology. It draws together up-to-date theories about guidance work and debates the importance of integrating theory and practice. Examining the processes in which practitioners engage when working with individual clients, the book also explores careers guidance within a group setting - an area that has previously been neglected in the literature. The book will be invaluable to students on courses in careers guidance, counselling and education. It will also be of great interest to professionals who need to keep up-to-date with current thinking and practice.

The Living Systems Theory of Vocational Behavior and Development (LSVD) explains and illustrates the processes by which individuals construct their work experiences, vocational pathways and career patterns through episodes of interaction with affordances they recognize within their contexts, and how counseling can facilitate those processes. The LSVD was created by combining the scientifically based systems theory that explicates the dynamics of all aspects of human functioning and development, called Humans as Self-Constructing Living Systems, with important ideas about vocational behavior and development. The resulting integrative theory represents the individual person as a dynamic, self-directing and self-constructing entity, i.e., a living system. Behavior Episodes (BEs) are the fundamental, person-in-context, dynamic units of analysis that serve as the "building blocks" by which individuals construct and retain their experiences in patterns that can be reactivated to facilitate future BEs. The book describes how individuals' history of satisfying BEs and their current activities provide the means by which vocational and career counselors can assist them to create satisfying vocational pathways. It also describes for researchers how new, non-linear, person-centered, quantitative and qualitative research methods can be used to analyze BE patterns to advance understanding of person-level processes that play key roles in individuals' vocational behavior and development. The LSVD was designed to be not just an integrative framework for the field of career development, but also to reconnect the field to related areas such as human resources and industrial-organizational psychology and to the range of human sciences that have already embraced a living systems theoretical model.

The fourth edition of Career Choice and Development brings together the most current ideas of the recognized authorities in the field of career development. This classic best-seller has been thoroughly revised and expanded to include the most influential theories of career choice and development, and it contains up-to-date information regarding the application of these theories to counseling practice. This edition

contains a wide range of career development theories that explore how people develop certain traits, personalities, self-precepts, and how these developments influence career decision making. This information will challenge teachers, researchers, and those involved in fostering career development to reexamine their assumptions and practices.

"The theme of The World Development Report 2007 is youth - young people between the ages of 12 to 24. As this population group seeks identity and independence, they make decisions that affect not only their own well-being, but that of others, and they do this in a rapidly changing demographic and socio-economic environment. Supporting young people's transition to adulthood poses important opportunities and risky challenges for development policy. Are education systems preparing young people to cope with the demands of changing economies? What kind of support do they get as they enter the labor market? Can they move freely to where the jobs are? What can be done to help them avoid serious consequences of risky behavior, such as death from HIV-AIDS and drug abuse? Can their creative energy be directed productively to support development thinking? The report will focus on crucial capabilities and transitions in a young person's life: learning for life and work, staying healthy, working, forming families, and exercising citizenship. For each, there are opportunities and risks; for all, policies and institutions matter."

Containing a selection of texts on education prepared during the work of the International Commission on Education for the Twenty-first Century, this volume bears witness to some paradoxes faced by education: to reconcile divergent aims and trends, to embody both continuity and renewal, to encourage conformity and innovation. These papers are intended to complement existing literature to respond to questions that arose in the course of the Commission's work, and to illuminate specific issues that cross disciplines.
