Intensive research in matrix completions, moments, and sums of Hermitian squares has yielded a multitude of results in recent decades. This book provides a comprehensive account of this quickly developing area of mathematics and applications and gives complete proofs of many recently solved problems. With MATLAB codes and more than 200 exercises, the book is ideal for a special topics course for graduate or advanced undergraduate students in mathematics or engineering, and will also be a valuable resource for researchers. Often driven by questions from signal processing, control theory, and quantum information, the subject of this book has inspired mathematicians from many subdisciplines, including linear algebra, operator theory, measure theory, and complex function theory. In turn, the applications are being pursued by researchers in areas such as electrical engineering, computer science, and physics. The book is self-contained, has many examples, and for the most part requires only a basic background in undergraduate mathematics, primarily linear algebra and some complex analysis. The book also includes an extensive discussion of the literature, with close to 600 references from books and journals from a wide variety of disciplines.

In Money Matters, Richard Gray investigates the discourses of aesthetics and philosophy alongside economic thought, arguing that their domains are not mutually exclusive. The transition in Germany from an agrarian or proto-industrial economy to a capitalist industrial economy, which was paralleled by a shift from the exchange of money in coin to the use of paper currencies, occurred simultaneously with an efflorescence of German-language literature and philosophy. Based on close readings of canonical literary and philosophical texts, Gray explores how this confluence led to a rich cross-fertilization between economic and literary thought in Germany during this period. Money Matters documents the surprising degree to which literature and philosophy participated in the creation of modern economic paradigms, as well as the extent to which economics influenced literature and philosophy. The cultural artifacts of the period demonstrate the existence of an "economic unconsciousness" persistent notions of value and exchange that inflect the aesthetic and thematic dimensions of literary and philosophical texts. This book offers a thought-provoking and original analysis of literature and ideas in the critical transition period from Kant and Goethe, through the German Romantics, to Marx.

Jensen's Format Writing is concerned with developing expository writing skills for high school students. How that point is made may often determine whether the piece is accepted or rejected. Students completing this course will learn valuable skills. the secret of cutting your work in half when it comes to writing a paper.how to order your presentation for its most powerful effect on the reader.a technique for getting the essence of what you read down on paper for future reference.how to stack up your ideas so that they flow together in a natural fashion.how to move ideas from sentence to sentence by following a simple rule.all about what and how to document your sources when doing research and writing.

THE RESEARCH WRITER helps students transition from writing the research paper to doing research writing, from reporting information to working with ideas. The subtitle--Curiosity, Discovery, Dialogue--signals this shift: this handbook promotes research as a curiosity-driven activity that leads to discoveries that are then shared through various types of dialogue. With this practical and reader-friendly handbook, students will learn the research and writing skills needed for any research project and will be able to apply and transfer these skills to their own disciplines. This is, quite possibly, one of the world's best designed art books. Featured within its pages are works from the Friedrich Christian Flick Collection--one of the world's most significant (and yes, controversial) collections of contemporary art. But this book doesn't merely present some 400 works by 40 artists, it also seeks, through its design, to provide an individual stage--or section--for each artist in order to highlight the artist's philosophy, or to play off of his or her signature works of art. For example, Raymond Pettibon's comic-like drawings unfold to a newspaper-sized spread, while Gordon Matta-Clark's opening page has a split in it that corresponds perfectly to the cut-out in the house of his now-iconic piece, Splitting. The photograph of the house is revealed in full when the page is turned. A list of each artist's works in the collection is provided at the start of their section, which is coded with a specific color for that artist, and often features changes in paper type that correspond to a specific body of work (Larry Clark's gritty black and white Tulsa images are printed on uncoated paper, while Rachel Khedoori's Pink Room color images are made even more vibrant by high-gloss paper.) With splendid color reproductions, color-coded pages, and luxurious gatefolds, this book is not just a book about art--it is art. Anyone who has a love of art, of design, or of books will treasure this volume, which also gives detailed specs on every piece of art, and a short bio on each artist. The Friedrich Christian Flick Collection reads as a book of 40 individual

monographs . . . turning each page is a treat.
