

Paper On Breast Cancer

Breast cancer is the second most commonly diagnosed cancer in women in the United States, with over 200,000 new cases of invasive breast cancer expected in women in 2010. It is the second most common cause of cancer-related death in women, killing over 40,000 women each year. Tamoxifen was approved by the U.S. Food and Drug Administration (FDA) in 1999 as a preventive strategy for women at high risk of developing breast cancer. Data from the 2000 National Health Interview Survey estimated that 10 million U.S. women ages 35 to 79 years of age were candidates for tamoxifen preventive therapy and for 2.4 million of these women, the benefits would outweigh the harms. However, despite its approval for more than a decade, less than one percent of women use tamoxifen as a preventive therapy. In 2007, the FDA approved the use of raloxifene hydrochloride for reduction in the risk of invasive breast cancer in postmenopausal women with osteoporosis and/or at high risk for invasive breast cancer. In 2008, the Agency for Healthcare Research and Quality (AHRQ) commissioned the Oregon Evidence-based Practice Center (Oregon EPC) to conduct a comparative effectiveness review (CER) on the effectiveness of medications to reduce the risk of primary breast cancer in women. Briefly, the five key questions addressed by the review were: (1) In adult women without preexisting breast cancer, what is the comparative effectiveness of selective estrogen receptor modulators (SERMs) tamoxifen and raloxifene, and the selective tissue estrogenic activity regulator (STEAR) tibolone, when used to reduce risk for primary breast cancer on improving short-term and long-term outcomes? (2) What is the evidence for harms? (3) How do outcomes vary by heterogeneity in subpopulations? (4) What is the evidence that harms or secondary potential benefits affect treatment choice, concordance, adherence, and persistence to treatment? (5) What methods, such as clinical risk-assessment models, have been used to identify women who could benefit from medications to reduce risk of breast cancer?

Overcome Through Courage And Fear: Breast Cancer Journal: 6x9 Inch, 120 Pages, Blank Lined Notebook For Women To Write In This beautiful and inspirational gift idea for breast cancer patients and survivors to write down their Breast Cancer Journey or to keep track of doctors appointments, chemotherapy and radiation treatment. Writing is a great stress reliever, as well as a way to cope with your thoughts, feeling and fears about breast cancer. It will also give survivors a chance to look back on their journey and recall their fight. This journal will give patients motivation to keep going, never give up and never to lose hope or faith. This blank lined notebook is a perfect gift for that special person battling breast cancer. Breast Cancer Awareness month is coming in October.

This amazing, and personal Journal Style Half and Half College Ruled and Blank Paperback Book makes an exceptional gift for someone special. Perfect for adding in your own prompts or following along with Writing Prompts or Drawing Prompts, this book showcases your passion on the cover AND within the pages as you fill in data and scribbles, noted or sketches and doodles, this also makes an amazing journal and diary alternative. Half and half paper (dual designs) allows you to get creative. There are lots of reasons someone may want mixed paper styles on one sheet. Adults may like to plot designs, craft projects or solve engineering problems and write accompanying notes or draw sketches. Teachers love that Kids may like to solve a math problem and describe how they solved it (or even write a story about the problem!) The blank and lined papers can also be used as story paper for writing practice. College rule (also known as medium ruled paper) is the most common lined paper in use in the United States. It is generally used in middle school through to college and is also popular with adults. This Book has 100 pages (50 sheets of paper) and measures 7.5" X 9.25', is Medium Sized and is perfect for Work, Business or School. This is a good choice for teen or adult notebooks and composition books (known as exercise books outside the US).

Overcome Through Courage and Fear

Breast Cancer Awareness Themed a Lined/Ruled Paper Composition Book/Journal

This dissertation's three research papers examine issues relevant to younger breast cancer survivors and their health care providers. Research Paper I is an exploratory, qualitative study to investigate breast cancer survivors' experiences with breastfeeding (N=11). Research Paper II is a nested case-control study to evaluate physical and mental health differences among women who had a child after breast cancer compared to those who did not (N=81). Research Paper III is a cohort study evaluating the association between long-term depressive symptoms and post-diagnosis reproductive concerns (N=131). All three studies include participants diagnosed with early stage breast cancer at age 40 or younger who participated in the Women's Healthy Eating and Living (WHEL) study (N=3088), a multiyear randomized trial of a dietary intervention. Research Paper I includes a purposeful sample of 11 survivors who had a child after treatment ended. We conducted open-ended semi-structured interviews and used cross-case inductive analysis to identify themes. Ten of 11 participants initiated breastfeeding. The main themes were: 1) Cautiously hopeful, 2) Exhausting to rely on one breast, 3) Motivated despite challenges, 4) Support and lack of support, and 5) Encouraging to others. Participants were motivated to breastfeed but faced significant challenges, largely due to a reliance on one lactating breast. Research Paper II is a nested case-control study involving 81 WHEL participants, 27 cases who had a child after cancer and 54 controls who did not (matched on age and stage at diagnosis). This study explores a selection bias indicating that cancer survivors who become pregnant are a self-selected healthier group. After controlling for covariates in a multilevel model, physical health was not different between groups but mental health was marginally higher among cases, meeting a level of clinical significance. Research Paper III is a cohort study involving 131 WHEL participants who participated in a continuation survivorship study. This study investigates whether recalled concerns about reproduction after breast cancer treatment are associated with long-term depressive symptoms, monitored at up to 6 time-points. Multi-level modeling identified higher reproductive concerns as an independent predictor of consistent depressive symptoms after controlling for both social support and physical health.

Breast cancer remains the most common invasive cancer among women. The primary patients of breast cancer are adult women who are approaching or have reached menopause; 90 percent of new cases in U.S. women in 2009 were diagnosed at age 45 or older. Growing knowledge of the complexity of breast cancer stimulated a transition in breast cancer research toward elucidating how external factors may influence the etiology of breast cancer. Breast Cancer and the Environment reviews the current evidence on a selection of environmental risk factors for breast cancer, considers gene-environment interactions in breast cancer, and explores evidence-based actions that might reduce the risk of breast cancer. The book also recommends further integrative research into the elements of the biology of breast development and carcinogenesis, including the influence of exposure to a variety of environmental factors during potential windows of susceptibility during the full life course, potential interventions to reduce risk, and better tools for assessing the carcinogenicity of environmental factors. For a limited set of risk factors, evidence suggests that action can be taken in ways that may reduce risk for breast cancer for many women: avoiding unnecessary medical radiation throughout life, avoiding the use of some forms of postmenopausal hormone therapy, avoiding smoking, limiting alcohol consumption, increasing physical activity, and minimizing weight gain. Breast Cancer and the Environment sets a direction and a focus for future research efforts. The book will be of special interest to medical researchers, patient advocacy groups, and public health professionals.

The arc of cancer's narrative is a long one. For some, the aftermath of cancer starts immediately upon being diagnosed. For others, it sneaks in, a shadow extending its reach. The book's authors have many stories to tell-stitching broken and scarred bodies back together, reconstructing identities, denying and confronting and accepting death. This anthology reveals the realities of life, through and with cancer, as the authors learn how to survive and in the process, how to live. The stories beg the reader to step into the space that cancer has razed, to consider what is most beloved and cherished, and to ask what the sum of one's life will be.

Brave & Strong: Breast Cancer Journal, Breast Cancer Awareness Gift, Blank Lined Notebook For Women To Write In This beautiful and inspirational book is a great gift idea for breast cancer patients and survivors to write down their Breast Cancer Journey or to keep track of doctors appointments, chemotherapy and radiation treatment. Writing can be a great stress reliever, as well as a way to cope with your thoughts, feeling and fears about breast cancer and any other important notes as a diary. It will also give survivors a chance to look back on their journey and recall their fight. This journal will give patients motivation to keep going, never give up and never to lose hope or faith. Breast Cancer Awareness month is coming in October. Makes unique and perfect gifts for those special people in your life that are battling breast cancer. Each page is journal paper. Size is 6x9 inches, 110 pages, soft matte finish cover, white paper, paperback

This book provides the reader with up-to-date information on important advances in the understanding of breast cancer and approaches to its management. Current and emerging perspectives on genetics, biology, and prevention are first discussed in individual sections are then devoted to pathology, imaging, oncological surgery, plastic and reconstructive surgery, medical oncology and radiotherapy. In each case the focus is on the most recent progress and/or state of the art therapies and techniques. Further detailed consideration include particular conditions requiring multidisciplinary approaches, the investigation of new drugs and immunological agents, lifestyle and psychological aspects, and biostatistics and informatics. The book will be an excellent reference for practitioners, interns and residents in medical oncology, oncologic surgery, radiotherapy, pathology, and human genetics, research and advanced medical students.

Seminar paper from the year 2017 in the subject Medicine - Epidemiology, grade: 1, Egerton University, language: English, abstract: Breast cancer is a condition that affects women throughout all communities, breast cancer is a form of malignancy that affects the cells of the breast. When diagnosed, this condition can result in aggressive treatment modalities including chemotherapy and breast mastectomy. To decrease the diagnosis of breast cancer in women, adequate preventative methods are needed to assist the female population in decreasing the likelihood of disease. This paper offers women and Advanced Practice Nurses an educational program grounded in evidence-based research and guidelines that will assist in providing female patients with screening methods to detect breast cancer and identify risk factors that will assist in decreasing the likelihood of disease. A form of malignancy that affects the cells of the breast, breast cancer is diagnosed in one of eight women during their lifetime. Breast cancer is a serious condition that reaches the lives of all members of the female population as up to 85% of women with newly diagnosed breast cancer do not have a family history of the condition. All ages and ethnicities are being diagnosed with breast cancer with many of them unaware and uneducated concerning the prevention methods and lifestyle modifications that assist in decreasing the chance of developing the condition. Nurse practitioners play a vital role in breast cancer prevention in women. As Advanced Practice Nurses continue to become an increased and strong presence in the provision for the population, they are able to provide teaching and education to women regarding their health and wellness and the prevention of breast cancer. The purpose of this paper is to provide an educational program for breast cancer prevention in women grounded in evidence-based research and guidelines concerning women's health. This educational program will assist practitioners in educating the target population of women in identifying, understanding and practicing the necessary interventions for breast cancer prevention. By utilizing this educational tool, Advanced Practices Nurses will be able to ensure successful breast cancer prevention for female patients. Effective breast cancer prevention will be achieved by educating and encouraging women to complete important interventions such as BRCA testing and mammography, addressing modifiable risk factors such as obesity, alcohol and tobacco use and implementing interventions such as exercise and healthy eating.

Synthesizes reports from the scientific literature on psycho-social adjustment to the consequences of breast cancer in women and summarizes an informal situational analysis involving key Health Canada contacts in the breast cancer and mental health fields. Main findings are highlighted in the following areas: the role of psycho-social factors in breast cancer aetiology and prognosis; breast cancer screening; the pre-diagnosis period; treatment; post-treatment and follow-up periods; breast cancer survivors; impact of breast cancer on the spouse or partner and family members; the role of coping strategies and social support in adjustment to breast cancer; and factors which impact on the quality of psycho-social care. Implications for future research are discussed. The appendix includes a glossary and an outline of various aspects of the Canadian Breast Cancer Initiative.

This volume highlights research issues specific to geriatric oncology in the field of carcinogenesis and cancer prevention and treatment, based on the biologic interactions of cancer and age. It conveys a sustainable way of thinking about cancer and aging.

There have been very significant advances across many areas of the study, investigation and treatment of breast cancer. This publication surveys how scientific advances have influenced, improved and extended therapeutic options. The volume spans prevention, screening, genetics, and treatment of pre-invasive breast cancer, before focusing in depth on management of established breast cancer. This includes chapters on the various therapeutic options available and their role in treating breast cancer from the very earliest stage through to advanced and metastatic breast cancer. In addition, the text looks forward at the potential for emerging experimental strategies to become adopted into medical management in the future. The volume concludes with a chapter on palliative care. This wide-ranging account will be essential for breast cancer specialists, trainees in oncology and clinical research scientists.

World Cancer Report 2014 provides a professional, multidisciplinary assessment of all aspects of the geographical distribution, biology, etiology, prevention, and control of cancer, predicated on research. World Cancer Report is designed to provide non-specialist health professionals and policy-makers with a balanced understanding of cancer control and to provide established cancer professionals with insights about recent developments.

This contributed book covers all aspects concerning the clinical scenario of breast cancer in young women, providing physicians with the latest information on the topic. Young women are a special subset of patients whose care requires dedicated expertise. The book, written and edited by internationally recognized experts who have been directly involved in the international consensus guidelines for breast cancer in young women, pays particular attention to how the disease and its planned treatment can be effectively communicated to young patients. Highly informative and carefully structured, it provides both theoretical and practice-oriented insight for practitioners and professionals involved in the different phases of treatment, from diagnosis to intervention, to follow-up – without neglecting the important role played by prevention.
