

Paper On Honor

Method and Perspective in Anthropology was first published in 1954. Minnesota Archive Editions uses digital technology to make long-unavailable books once again accessible, and are published unaltered from the original University of Minnesota Press editions. The boundaries and goals of anthropology are changing and expanding as scholars recognize and pursue wider opportunities for achieving an understanding of the cultural development of man. The range of interests of the discipline as shown in this book embodies such varied fields as archaeology, human geography, linguistics, and the organization of society. With the broadening and deepening of these concerns, those working and studying in the various areas of anthropology have sought more concise methods and more adequate techniques with which to meet increasingly complex problems. This volume of papers, published in honor of a scholar who has himself devoted much effort to the refinement of anthropological methods, represents a long step forward toward the solution of some of the problems of methodology. The contributors are outstanding scholars in cultural anthropology, ethnology, and related fields. The first twelve papers, by as many different authors, present discussions of specific aspects of ethnography, cultural anthropology, prehistory, linguistics, ethnogeography, and sociology. The final paper, by Alfred L. Kroeber, provides a critical summary of the preceding papers. All twelve of the writers answer, in their own way, the questions of how they derive their data, and how they establish their theoretical frame of reference. The contributors are, in addition to Professor Kroeber, Melville J. Herskovits, Sister M. Inez Hilger, Elizabeth Colson, David G. Mandelbaum, Allan R. Holmberg, Robert F. Spencer, Ralph Linton, Erwin H. Ackerknecht, Lloyd A. Wilford, Joseph H. Greenberg, Omer C. Stewart, and Raymond V. Bowers.

This collection of original research papers is inspired by the life and work of Russell Galen Schuh (1941-2016), Distinguished Professor of Linguistics and one of the longest-serving faculty members (1975-2016) in the UCLA Linguistics Department. With a focus on descriptive and comparative/historical linguistics, Schuh became one of the world's foremost specialists on the Chadic languages of Africa. He spent nearly five decades conducting research in West Africa, principally northern Nigeria, but also in Ghana, Niger, Senegal, Togo, and the far flung neighborhoods of Los Angeles. He published extensively on Hausa, Ngizim, Bole, Tangale, Bura, Podoko, Miya, Ngamo, and other languages, and his fieldwork experience extended to many more. Russ once mused that an ideal grammar should be rich in its content, covering "every generalization and idiosyncrasy of everystructure that exists in the language," and broad in its relevance and accessibility, making it "useful" to both anyone with linguistic training and anyone regardless of their theoretical positionings. The papers in this volume are a testament to theseideals, and the extensive influence not of a single grammar, but of Russ' life work.

Written and compiled by friends and former students, The Idea of Social Structure honors Robert K. Merton, considered one of the premier sociologists of the twentieth century. Along with Talcott Parsons and Marion J. Levy, Merton was emphatic in his use of the term "social structure"—however different they were in defining and refining the term. The chapters in this volume address many of Merton's diverse sociological theories and, in turn, his theories' impact upon a very large sociological territory. The volume includes major statements on the context of working with Merton by Lewis A. Coser, Paul F. Lazarsfeld, Robert A. Nisbet, and Seymour Martin Lipset, as well as memorable statements covering Merton's interests in the sociology of knowledge and science, planning communities, medical education, relative deprivation, everyday life, political roles, and communication media. This is a powerful sourcebook for understanding the work of Merton and of his intellectual successors. Nisbet called the decade of the 1930s among the most vital and creative periods in American history. It was certainly a period of intense struggle—political, military, and ideological. But the formation of modern sociology was without question one of the crowning achievements in the scientific evolution of the century. The volume is sharply focused on Merton's work and deeply appreciative of the nature of his contribution. It is a landmark effort in the study of sociology as history.

Method and Perspective in Anthropology

At the end of the 1997-1998 academic year, Professor Karel Dobbelaere was awarded emeritus status by the Catholic University of Leuven. For four decades, he contributed and gave shape to academic sociology in Flanders. During this period, he showed students how to find their way into general sociology and sociological research at the Catholic University of Leuven and the University of Antwerp. At the same time, he brought the sociology of religion in Flanders to maturity. With indefatigable dedication, he defended the autonomy and the necessity of a scientific, empirical study of churches, denominations, sects, and religious beliefs from a sociological perspective. Karel Dobbelaere managed to reconcile harmoniously a permanent presence in Flemish sociology with an international scientific career. He enjoys great recognition within the world community of sociologists of religion and within its representative organization, the Soci.

Joel dares his best friend, Tony, to a swimming race in a dangerous river. Both boys jump in, but when Joel reaches the sandbar, he finds Tony has vanished. How can he face their parents and the terrible truth?

This volume offers an important contribution to the comparative historical study of languages. Most of the articles deal with topics concerning the Indo-European proto-language as well as the individual languages descended from it. Essays in Finno-Ugric philology complete the volume. The book is divided in 8 sections: I. Indo-European, II.

Anatolian, III. Indic, IV. Iranian and Armenian, V. Celtic, VI. Germanic Languages, VII. Slavic and Albanian, VIII. Fennougrica and Altaic.

Police are the people who work for an official organization whose job is to catch criminals and make sure that people obey the law. Police officers save lives every day. Being a police officer can be the most fascinating and satisfying career you could ever choose. This Police Officers Notebook can be used as a journal, travel notebook, diary, business / office notebook, school journal, daily planner or organizer, valentine/christmas/birthday gift for police officers, etc. - Perfectly sized at 6" x 9" - 120 pages - Softcover Bookbinding - Flexible Paperback

Patty Jo Watson's prolific career began in the early 1950s as an energetic graduate student at the University of Chicago and culminated with her induction into the National Academy of Sciences and subsequent retirement from Washington University in 2003. During that time her groundbreaking research impacted multiple fields within the discipline of archaeology, but her astonishing research into the underground caves of the eastern United States recognizes her as one of the world's leading experts on cave archaeology. In honor of Dr. Watson and her monumental achievements in the field, twenty-two established scholars present in this volume new and insightful research into prehistoric and historic use of southeastern dark zones. Cave Archaeology of the Eastern Woodlands, edited by David H. Dye, explores how prehistoric and historic peoples utilized caves as a means to further their economic growth and represent cultural values within their societies. The essays range in topics from early gypsum mining to rare American Indian cave art, from historic saltpeter extraction to current archaeobotanical and paleofecal research. Dye and the contributors contend that studies of deep zone caves reveal multiple insights into the values, beliefs, and cultural lifeways of ancient and historic peoples. In addition to presenting new research in the field, contributors also place particular emphasis on Dr. Watson's influential cave research and how it has molded their own work. The essays convey a sense of wonder at the unique and sometimes harrowing world of caves, and readers will get a sense of why Native Americans regarded the Underworld or Beneathworld as a supernatural realm to be tread upon with great respect and caution. This volume of uniformly excellent essays will no doubt be a lantern that sheds light onto the importance of studying and understanding the all too secret world of underground caves. David H. Dye is professor of archaeology in the Department of Earth Sciences at the University of Memphis and a former student of Patty Jo Watson's. He is author of Cycles of Violence: An Archaeology of Peace and War in Native Eastern North American, coeditor, with Richard J. Chacon, of The Taking and Displaying of Human Body Parts as Trophies by Amerindians, and, with Cheryl Anne Cox, of Towns and Temples Along the Mississippi.

The Gathering 4 Gardner is a biannual conference founded—and for many years organized—by Tom Rodgers to celebrate the spirit of Martin Gardner. While primarily concerned with recreational mathematics, most of Gardner's intellectual interests are featured, including magic, literature, philosophy, puzzles, art, and rationality. Gardner's writing inspired several generations of mathematicians by introducing us to the joy of discovery and exploration, and the Gathering's aim is to continue that tradition of inspiration. This volume, a tribute to Rodgers and Gardner, consists of papers originally presented at the Gathering 4 Gardner meetings. Recreational mathematics is strongly prominent with contributions from Neil Sloane, Richard Guy, Solomon Golomb, Barry Cipra, Erik Demaine, and many others. There are games and puzzles, including new Nim-like games, chess puzzles, coin weighings, coin flippings, and contributions that combine art and puzzles or magic and puzzles. Two historical articles present the stories of combinatorial game theory and the search for God's number for Rubik's Cube. Anyone who finds pleasure in clever and intriguing intellectual puzzles will find much to enjoy in Barrycades and Septoku.

This is a two-volume collection of original research papers designed to reflect the breadth and depth of the impact that William Labov has had on linguistic science. Four areas of 'Labovian' linguistics are addressed: First is the study of variation and change; the papers in sections I and II of the first volume take this as their central theme, with a focus on either the social context and uses of language (I) or on the the internal linguistic dynamics of variation and change (II). The study of African American English, and other language varieties in the Americas spoken by people of African descent and influenced by their linguistic heritage, is the subject of the papers in section III of the first volume. The third theme is the study of discourse; the papers in section I of the second volume develop themes in Labovian linguistics that go back to Labov's work on narrative, descriptive, and therapeutic discourse. Fourth is the emphasis on language use, the search for discursive, interactive, and meaningful determinants of the complexity in human communication. Papers with these themes appear in section II of the second volume.

You are looking for a great notebook? Lucky you found us! This fashionable themed notebook leaves you all freedom in creating every content you need and is a faithful companion in your everyday life. This individual design is rounded off by 120 pages of cream-white colored paper and a beautiful matt premium cover. The notebook has been designed by independent designers who you will support with every purchase. A great gift idea for the birthday of friends or as a gift for a special person. Also check out our other journals, maybe you'll find another one that you like as well.

Offering a reassessment of the tumultuous culture of politics on the national stage during America's early years, when Jefferson, Burr, and Hamilton were among the national leaders, Freeman shows how the rituals and rhetoric of honor provides ground rules for political combat. Illustrations.

This paper focuses on expectations for the American economy focused on the likelihood of secular stagnation, which continued to be debated throughout the post-war period. Concerns rose during the late 1960s and early 1970s about rapid population growth smothering the potential for economic growth in developing countries were contradicted when, during the mid- and late-1970s, fertility rates began to decline rapidly. In policy-oriented institutions (and in most businesses and individual decision making), policymaking decisions are often guided by projections and forward-looking indicators. The case of Michael Mussa has been one of great anticipation, and of great accomplishment, and all the early optimistic forecasts about him have turned out to be correct. Within the sphere of economics, undoubtedly the most famous and widely used forecast—one, incidentally, that thus far has often been incorrect—is that based on the Malthusian doctrine of the relationship between resources and population.

'Intellectics' seeks to understand the functions, structure and operation of the human intellect and to test artificial systems to see the extent to which they can substitute or complement such functions. The word itself was introduced in the early 1980s by Wolfgang Bibel to describe the united fields of artificial intelligence and cognitive science. The book collects papers by distinguished researchers, colleagues and former students of Bibel's, all of whom have worked together with him, and who present their work to him here to mark his 60th birthday. The papers discuss significant issues in intellectics and computational logic, ranging across automated deduction, logic programming, the logic-based approach to intellectics, cognitive robotics, knowledge representation and reasoning. Each paper contains new, previously unpublished, reviewed results. The collection is a state of the art account of the current capabilities and limitations of a computational-logic-based approach to intellectics. Readership: Researchers who are convinced that the intelligent behaviour of machines should be based on a rigid formal treatment of knowledge representation and reasoning.

Each of the contributions in this volume expresses in some way the hope that it is possible to achieve an integrity of linguistics, understood as a science of man, in its psychological, sociological, pragmatic and cultural context. The first section focuses on the history of language study, the second section on the integrative description of facets of language, and the last section on the need for the study of language in context.

Modern theory of elliptic operators, or simply elliptic theory, has been shaped by the Atiyah–Singer Index Theorem created 40 years ago. Reviewing elliptic theory over a broad range, 32 leading scientists from 14 different countries present recent developments in topology; heat kernel techniques; spectral invariants and cutting and pasting; noncommutative geometry; and theoretical particle, string and membrane physics, and Hamiltonian dynamics.The first of its kind, this volume is ideally suited to graduate students and researchers interested in careful expositions of newly-evolved achievements and perspectives in elliptic theory. The contributions are based on lectures presented at a workshop acknowledging Krzysztof P Wojciechowski's work in the theory of elliptic operators.
