The insights and wisdom of the late, great boat designer and builder Renowned as one of the last and best of the old-time boatbuilders, Captain R. D. "Pete" Culler provided a guiding light for the wooden boat revival in the 1970s. His designs are classic melds of elegance and utility; his workmanship was akin to artistry; and his teaching and writing a blend of clarity, good sense, insight, and humor. This book brings together the complete texts of Culler's classic works Boats, Oars, and Rowing and Skiffs & Schooners, along with articles from The Mariner's Catalogs and a selection of his timeless boat designs.

Perfect for crafty parents who are eager to get their kids excited about DIY, ProjectKid is everything you could want in a craft book: 100(!) stylish, inventive projects; step-by-step photographs; tips for the novice crafter; easy-to-follow instructions; and a fresh, modern look. What really sets these projects apart are the unexpected, ingenious ways Kingloff uses everyday objects and materials. (Did you ever think a body-wash bottle would make a perfect rocket ship?) And these are projects for things kids want to make—and keep—from a juice-box owl to a pirate ship to a curio cabinet for displaying all of their treasures, plus games, jewelry, and more. Also included in the book are basic crafting lessons (such as pom-pom making and weaving) to help children of all ages build a DIY arsenal, a handy guide to must-have tools and materials, and a source directory.

One of the most widely read texts on the subject, Boatbuilding Manual has been used for years as a standard reference at both boatbuilding and design schools. This fourth edition emphasizes traditional wooden construction but also surveys plywood, wood-epoxy, fiberglass, steel, aluminum, and other boatbuilding methods. The chapters on interpreting plans, lofting, and moldmaking are common to all methods. New to this edition are several chapters arising from the Miscellaneous Details chapter of earlier editions, an appendix on sharpening tools; expanded tables of metric equivalents; an expanded and annotated source guide for plans, fasteners, hardware, wood, and other staples of boatbuilding; and a list of additional reading. Thoroughly updated with respect to modern tools and materials, Boatbuilding Manual remains both a professional reference and the first book a budding amateur should buy.

Some people like to sail. Some people like to sail fast. This is a book about sailing faster. During the past few decades there has been a revolution in the way some boat designers and sailors have thought about, designed, built and sailed their boats. This book is about the new ideas which have led to these greater speeds and the faster sailing techniques which have been developed to achieve them. High Performance Sailing has become the standard reference work on high speed racing techniques - the bible for racing sailors, from dinghies right through to America's Cup boats. Ground-breaking in its thinking on boat speed, strategy and tactics, and timeless in its application. Now in its second edition, High Performance Sailing has been brought right up to date with new information, the discoveries from new boat testing and new developments.

For non boating enthusiasts—even if they've been at it awhile—there are scores of burning questions. If one boat has a round bottom and another's is veed, what difference does it make in the way they perform? What are the advantages of a cutter rig over a sloop? Why does one sailor swear by a full keel, while others won't have anything but a fin keel? Why does one powerboat have more flare in its topsides than another? And what is flare? Why do some hull shapes look "right"? How big an engine and propeller will it take to move that powerboat? What elements make a boat safe, or comfortable? Understanding Boat Design has been the place to look for quick, uncomplicated answers since 1971. Founder of the Yacht Design Institute, a highly respected designer for more than 30 years, and a frequent contributor to SAIL, Cruising World, and other magazines, Ted Brewer has again revised his classic primer. This new volume has been greatly expanded and contains information on many aspects of design that were not even thought of twenty years ago. Understanding

On the second day of the race they broke their rudder while surfing at 22 knots and were subsequently capsized by a massive wave in a big storm. This book tells the story of the race, the boat, the crew and what happened on that day, how crew, food and equipment were thrown around the interior, what happened to the crewman who was in the cockpit at the time, what damage was done to the boat and what the crew did to cope with and recover from the situation in which they found themselves.**
