We rely on willpower to create change in our lives...but what if we're thinking about it all wrong? In *Willpower Doesn't Work*, Benjamin Hardy explains that willpower is nothing more than a dangerous fad—one that is bound to lead to failure. Instead of "white-knuckling" your way to change, you need to instead alter your surroundings to support your goals. This book shows you how. The world around us is fast-paced, confusing, and full of distractions. It's easy to lose focus on what you want to achieve, and your willpower won't last long if your environment is in conflict with your goals--eventually, the environment will win out. *Willpower Doesn't Work* is the needed guide for today's over-stimulating and addicting environment. *Willpower Doesn't Work* will specifically teach you: How to make the biggest decisions of your life--and why those decisions must be made in specific settings How to create a daily "sacred" environment to live your life with intention, and not get sucked into the cultural addictions How to invest big in yourself to upgrade your environment and mindset How to put "forcing functions" in your life--so your default behaviors are precisely what you want them to be How to quickly put yourself in proximity to the most successful people in the world--and how to adapt their knowledge and skills to yourself even quicker How to create an environment where endless creativity and boundless productivity is the norm Benjamin Hardy will show you that nurture is far more powerful than your nature, and teach you how to create and control your environment so your environment will not create and control you.

In the golden age of tennis, when players were just learning how to become media personalities, men like John McEnroe, Jimmy Connors, Björn Borg and Ivan Lendl ruled the court. Now in a tell-all memoir, former top 10 seeded tennis star and chief McEnroe rival, Bill Scanlon, presents an unfettered look at the good old days of tennis when some of the most colorful (and infamous) players in history went head-to-head and the game was changed forever. *Bad News For McEnroe* is in part a revelation of the feud between McEnroe and the author that began when they were teenagers, but the essence of this book are the wonderful and surprising on- and off-the-court high jinks of such notable players as Guillermo Vilas, Borg, McEnroe, Ilie Nastase and Connors, all of whom Scanlon played and knew intimately, from locker room fights to on-court breakdowns and blow-ups. A story that could not have come from anyone but a true insider, Scanlon's tale of life on the pro tennis circuit will shock and delight tennis fans everywhere. Explores the defining features of HyperReality: what it is, how it works and how it could become to the information society what mass media was to the industrial society.

***Everything you always wanted to know about theories, meta-theories, methods, and interventions but didn't realize you needed to ask. This innovative textbook takes advanced undergraduate and graduate students "behind the curtain" of standard developmental science, so they can begin to appreciate the generative value and methodological challenges of a lifespan developmental systems perspective. It envisions applied developmental science as focused on ways to use knowledge about human development to help solve societal problems in real-life contexts, and considers applied developmental research to be purpose driven, field based, community engaged, and oriented toward efforts to optimize development. Based on the authors' more than 25 years of teaching, this text is designed to help researchers and their students intentionally create a cooperative learning community, full of arguments, doubts, and insights, that can facilitate their own internal paradigm shifts, one student at a time. With the aid of extensive online supplementary materials, students of developmental psychology as well as students in other psychological subdisciplines (such as industrial-organizational, social, and community psychology) and applied professions that rely on developmental training (such as education, social work, counseling, nursing, health care, and business) will find this to be an invaluable guidebook and toolbox for conceptualizing and studying applied problems from a lifespan developmental systems perspective. In 1972, philosopher of science Thomas Kuhn threw an ashtray at Errol Morris. This book is the result. At the time, Morris was a graduate student. Now we know him as one of the most celebrated and restlessly probing filmmakers of our time, the creator of such classics of documentary investigation as *The Thin Blue Line* and *The Fog of War*. Kuhn, meanwhile, was—and, posthumously, remains—a star in his field, the author of *The Structure of Scientific Revolutions*, a landmark book that has sold well over a million copies and introduced the concept of "paradigm shifts" to the larger culture. And Morris thought the idea was bunk. *The Ashtray* tells why—and in doing so, it makes a powerful case for Morris's way of viewing the world, and the centrality to that view of a fundamental conception of the necessity of truth. "For me," Morris writes, "truth is about the relationship between language and the world: a correspondence idea of truth." He has no patience for philosophical systems that aim for internal coherence and disdain the world itself. Morris is after bigger game: he wants to establish as clearly as possible what we know and can say about the world, reality, history, our actions and interactions. It's the fundamental desire that animates his filmmaking, whether he's probing Robert McNamara about Vietnam or the oddball owner of a pet cemetery. Truth may be slippery, but that doesn't mean we have to grease its path of escape through philosophical evasions. Rather, Morris argues powerfully, it is our duty to do everything we can to establish and support it. In a time when truth feels ever more embattled, under siege from political lies and virtual lives alike, *The Ashtray* is a bracing reminder of its value, delivered by a figure who has, over decades, uniquely earned our trust through his commitment to truth. No Morris fan should miss it.***

**Strategy requires an ability to conceive the future, see and create possibilities, and focus to choose a direction. Successful strategy is a mental discipline consisting of broad ranging, flexible, and creative thinking. Choosing the Future will help you achieve this success by studying fundamentals such as effective group thinking, knowing when to delay a decision for more information, balancing contrasting modes of thought, and transforming thought into action. Using a cycle to show the relationship among different strategic thinking tools, Choosing the Future gives you guidance to respond to these basic questions: What seems to be happening? What possibilities do we face? What are we going to do about it? Choosing the Future will help you advance your thinking skills. Rather than telling you what to do, it teaches you to use your business knowledge to discover your own ideas and strategic direction. The creation of the European Southern Observatory (ESO) in 1962 was the culmination of the dream of leading astronomers from five European countries. Over the years, as more member states joined, ESO constructed the La Silla and Paranal observatories, as well as the Atacama Large Millimeter/submillimeter Array (ALMA) together with partners. ESO is now starting to build the world's biggest eye on the sky, the European Extremely Large Telescope. At the dawn of 2012, its 50th anniversary year, ESO is ready to enter a new era. One that not even its founding members could have anticipated in their boldest dreams. Constantly at the technological forefront, ESO is ready to tackle new and as yet unimaginable territories of high-precision technology and scientific discovery. Produced especially for ESO's 50th anniversary, this sumptuously illustrated book takes the reader behind the scenes of the most productive ground-based observatory in the world. It contains the best 300 of ESO's images, hand-picked from a large collection of more than 100 000 images. "Beautifully produced, Europe to the Stars tells the story of how dreams of giant telescopes became a reality and covers many of the exciting discoveries made at La Silla and Paranal." –BBC Sky at Night, 1 February 2013 "Leave the book on your coffee table, certainly, but read it first and come back to it regularly. It's an intelligent, inspiring celebration of a great European scientific adventure." –Astronomy Now, 1 March 2013

In this book, the capability map, a novel general representation of the kinematic capabilities of a robot arm, is introduced. The capability map allows to determine how well regions of the workspace are reachable for the end effector in different orientations. It is a representation that can be machine processed as well as intuitively visualized for the human. The capability map and the derived algorithms are a valuable source of information for high- and low-level planning processes. The versatile applicability of the capability map is shown by examples from several distinct application domains. In human-robot interaction, a bi-manual interface for tele-operation is objectively evaluated. In low-level geometric planning, more human-like motion is planned for a humanoid robot while also reducing the computation time. And in high-level task reasoning, the suitability of a robot for a task is evaluated.

A bold new approach to performance by one of the top coaches in the country. In trying to improve-on the playing field, in the office, or even at home-most people seek out new information to get to the next level. They read a book, attend a class, or hire an expert to give them an edge. But Alan Fine, an accomplished tennis, golf, and executive coach and a renowned authority on peak performance, believes that this "outside-in" method is precisely what's holding you back from doing your best work. He's found the biggest obstacle to improved performance isn't not knowing what to do; it's not doing what you already know. Ironically, the quest for information and instructions designed to help you get ahead can often interfere with your ability to focus on doing something. Fine reveals his simple and proven approach to achieving breakthrough performance. It starts with reducing the interference that blocks your potential through an amazing process called G.R.O.W. (Goal, Reality, Options, Way Forward). No matter who you are or what you do, You Already Know How to Be Great will help you eliminate what is standing in the way of your goals.

The book proposes a paradigm shift in language planning and language policy in Africa. For the past fifty years, the dominant model has been the hegemonic model whereby a language of wider communication (LWC) is imposed on minority languages. It is now time for a paradigm shift in favor of a more egalitarian model in which all the languages spoken in the same country, irrespective of their size, are planned. The paradigm shift concerns four critical areas: status planning, cost-benefit planning, acquisition planning, and corpus planning. Such a shift is justified for the following reasons: First, the hegemonic model has a dismal track record of success in Africa and elsewhere. Second, the hegemonic model exacerbates linguistic conflicts in many countries. Consequently, policy makers shun it for fear

of jeopardizing the fragile social fabric in their respective countries. Last, a shift away from the hegemonic model is recommended because it is too costly to implement. The "democratic model" is undergirded by the Strategic Game Theory proposed by David Laitin. It forecasts a 3±1 language outcome for most African countries. This outcome supports the "three language formula" now called for by the United Nations Development Program (UNDP).

***Personal success comes from taking positive action. Yet not everyone is able to take positive action and therefore they fail to meet their potential in life. Why is that? What is it that stops people from being as successful as they could be? I believe I have the answer to these questions and it is all to do with Paradigms. This is because there is a direct correlation between our paradigms and how we act and behave. By changing our paradigms we immediately change the way we think and act. And because we attract to ourselves what we think about, it is essential we think about, dream about and envision our future. Our paradigms attract what is required to achieve our visions and what make us successful. The Paradigm of Success sets out a journey towards success through having a powerful vision energised by action that is synergised by a strong sense of 'why' and 'belief' which are framed by the paradigms. It is a journey of incremental learning that when applied may empower us to make a positive difference in our own lives and in the lives of others.***

This important new study is the first to closely examine the challenges and opportunities for sports development in the United States, a global sporting giant with a unique, market-driven sporting landscape. Presenting an innovative model of integrated sports development, the book explores the inter-relationship between elite and mass sport across history, drawing on comparative international examples from Australia to the former USSR and Eastern bloc countries. At the heart of the book is an in-depth empirical study of three (traditional and emerging) sports in the US – tennis, soccer and rugby – that offer important lessons on the development of elite sport, methods for increasing participation, and the establishment of new sports in new markets. No other book has attempted to model sports development in the United States in such depth before.***

In a comprehensive and theoretically novel analysis, *Take Back Our Future* unveils the causes, processes, and implications of the 2014 seventy-nine-day occupation movement in Hong Kong known as the Umbrella Movement. The essays presented here by a team of experts with deep local knowledge ask: how and why had a world financial center known for its free-wheeling capital transformed into a hotbed of mass defiance and civic disobedience? *Take Back Our Future* argues that the Umbrella Movement was a response to China's internal colonization strategies—political disenfranchisement, economic subsumption, and identity reengineering—in post-handover Hong Kong. The contributors outline how this historic and transformative movement formulated new cultural categories and narratives, fueled the formation and expansion of civil society organizations and networks both against the regime, and spurred the regime's turn to repression and structural closure of dissent. Although the Umbrella Movement was fraught with internal tensions, *Take Back Our Future* demonstrates that the movement politicized a whole generation of people who had no prior experience in politics, fashioned new subjects and identities, and awakened popular consciousness. This handbook provides insights into becoming a better and more evolved athlete. It offers aspiring athletes, regardless of skill level, a better understanding of their bodies and how to unlock the unlimited potential of muscles without injury. It focuses on the "superhero" muscle: the iliopsoas, and also sheds light on Diamond-Corporation's new technology and elite athleticism, and how these can contribute to a healthier life. Lastly, the authors explore the mindset of success and provide exercises for remaining calm under pressure. This stand-alone book is the sequel to *Paradigm Shift for Future Tennis and Enhancing Performance and Reducing Stress in Sport* (2014, Springer). This book is written by scientists, whose expertise collectively spans the fields of biomechanics, clinical surgery, current and former elite athleticism, engineering and naturopath doctoral work. Together, they aim to inspire and educate athletes on how to improve their sports performance by using new technologies, world class biomechanical knowledge and ancient herbal medicines.

A Black mother bumps up against the limits of everything she thought she believed—about science and medicine, about motherhood, and about her faith—in search of the truth about her son. One morning, Tophs, Taylor Harris's round-cheeked, lively twenty-two-month-old, wakes up listless, only lifting his head to gulp down water. She rushes Tophs to the doctor, ignoring her own fear of herself, trained by years of therapy for generalized anxiety disorder, that tries to whisper that she's overreacting. But at t

hospital, her maternal instincts are confirmed: something is wrong with her boy, and Taylor's life will never be the same. With every question the doctors answer about Tophs's increasingly troubling symptoms, more arise, and Taylor dives into the search for a diagnosis. She spends countless hours trying to navigate health and education systems that can be hostile to Black mothers and children; at night she googles, prays, and interrogates her every action. Some days, her sweet, charismatic boy seems just fine; others, he struggles to answer simple questions. A long-awaited appointment with a geneticist ultimately reveals nothing about what's causing Tophs's drops in blood sugar, his processing delays—but it does reveal something unexpected about Taylor's own health. What if her son's challenges have saved her life? *This Boy We Made* is a stirring and radiantly written examination of the bond between mother and child, full of hard-won insights about fighting for and finding meaning when no one goes as expected.

"Some books provide us with information about the world, but every once in a while a book appears that enables us to imagine new, more wonderful worlds. Named by Time magazine as one of America's top 25 evangelicals, McLaren, along with such contemporaries as N.T. Wright, J. Wallis, and Rob Bell, is one of the acknowledged leaders of a new generation of Christians who want to update their faith for current times while remaining true to the core message of Jesus. In this controversial and thought-provoking book, McLaren explores the questions that will determine the shape of Christianity for the next 500 years.

***"How would the humanities change if we grappled with the ways in which digital and virtual places are designed, experienced, and critiqued? In Rethinking Virtual Places, Erik M. Champion draws from the fields of computational sciences and other place-related disciplines to argue for a more central role for virtual space in the humanities. For instance, recent developments in neuroscience could improve our understanding of how people experience, store, and recollect place-related encounters. Similarly, game mechanics using virtual place design might make digital environments more engaging and learning content more powerful and salient. In addition, Champion provides a brief introduction to new and emerging software and devices and explains how they help, hinder, or replace our traditional means of designing and exploring places. Perfect for humanities scholars fascinated by the potential of virtual space, Rethinking Virtual Places challenges both traditional and recent evaluation methods to address the complicated problem of understanding how people evaluate and engage with the notion of place"--***

***The book "Paradigm Shift for Future Tennis" starts with revelations that make obvious the limitations of today's tennis, which does not use the laws of modern Biomechanics and Neurophysiology. The second part of the book includes a new approach to the quantum mind of a champion. It will reveal the secret weapon of Roger Federer and the blueprint of a future tennis champion. This book will expose the new tennis shot emerging from the field of sports science. It is a real weapon, which can generate a ball-speed similar to that of the first serve: the Power High-Forehand. Its aim is to generate maximal possible racket-head speed while players do not wait for the ball to bounce. This is both a tactical and psychological basis for the future tennis game. This aggressive interceptive psychology will shape the minds of future tennis champions. High racket-head speed can be achieved using the stretch-reflex, without big loops and swings.***

***The increasing presence of mobile robots in our everyday lives introduces the requirements for their intelligent and autonomous features. Therefore the next generation of mobile robots should be more self-capable, in respect to: increasing of their functionality in unforeseen situations, decreasing of the human involvement in their everyday operations and their maintenance; being robust; fault tolerant and reliable in their operation. Although mobile robotic systems have been a topic of research for decades and aside the technology improvements nowadays, the subject on how to program and making them more autonomous in their operations is still an open field for research. Applying bio-inspired, organic approaches in robotics domain is one of the methodologies that are considered that would help on making the robots more autonomous and self-capable, i.e. having properties such as: self-reconfiguration, self-adaptation, self-optimization, etc. In this book several novel biologically inspired approaches for walking robots (multi-legged and humanoid) domain are introduced and elaborated. They are related to self-organized and self-stabilized robot walking, anomaly detection within robot systems using self-adaptation, and mitigating the faulty robot conditions by self-reconfiguration of a multi-legged walking robot. The approaches presented have been practically evaluated in various test scenarios, the results from the experiments are discussed in details and their practical usefulness is validated.***

***This title brings together work on embodiment, action, and the predictive mind. At the core is the vision of human minds as prediction machines - devices that constantly try to stay one step ahead of the breaking waves of sensory stimulation, by actively predicting the incoming flow. In every situation we encounter, that complex prediction machinery is already buzzing, proactively trying to anticipate the sensory barrage. The book shows in detail how this strange but potent strategy of self-anticipation ushers perception, understanding, and imagination simultaneously onto the cognitive stage.***

One of the most distinguishing abilities that human beings display is the ability of turning almost everything into a clue to make a problem affordable in relation to what one knows and, most of all, to what one does not know. That is what characterizes humans as chance seekers. A poor pattern of reasoning and even our ignorance may help us make a decision, and eventually solve a problem. This is the rationale of biased rationality. However, not everything leads us always to a good decision. Some people are not satisfied with weak arguments or it-is-just-so strategies. They want something better. This second attitude points to a different form of rationality that takes advantage of the idea of distributed cognition. Basically, human beings improve their survival strategies by building cognitive niches capable of delivering potentially ever more symptomatic information. It is through various manipulations of the environment that we gain new and more reliable chances which can be used to de-bias our rationality. Through the laborious activity of cognitive niche construction, we come up with situations in which we are better afforded by our environment, and thus biases or fallacies cease to be appealing.***

***Sustainable Logistics and Supply Chain Management is the essential guide to the principles and practices of sustainable logistics operations and the responsible management of the entire supply chain. Leadership is viewed as a phenomenon allowing advantages for organizations and their success. Although much research has been done on the concept of leadership, many studies do not include the different styles, perspectives, and contexts of leadership. As such, this book aims to fill this gap by combining several studies on leadership from different perspectives. The various chapters address such topics as millennial leaders, Theory X style leadership, leadership in the turbulent environment, emotional intelligence, and much more. This volume shows how new insights about leadership can stimulate

Could "UFOs" and "Aliens" simply be us, but from the future? This provocative new book cautiously examines the premise that extraterrestrials may instead be our distant human descendants, using the anthropological tool of time travel to visit and study us in their own hominin evolutionary past. Dr. Michael P. Masters, a professor of biological anthropology specializing in human evolutionary anatomy, archaeology, and biomedicine, explores how the persistence of long-term biological and cultural trends in human evolution may ultimately result in us becoming the ones piloting these disc-shaped craft, which are likely the very devices that allow our future progeny to venture backward across the landscape of time. Moreover, these extraterrestrials are ubiquitously described as bipedal, large-brained, hairless, human-like beings, who communicate with us in our own languages, and who possess technology advanced beyond, but clearly built upon, our own. These accounts, coupled with a thorough understanding of the past and modern human condition, point to the continuation of established biological and cultural trends here on Earth, long into the distant human future.

The process of user-centered innovation: how it can benefit both users and manufacturers and how its emergence will bring changes in business models and in public policy. Innovation is rapidly becoming democratized. Users, aided by improvements in computer and communications technology, increasingly can develop their own new products and services. These innovating users—both individuals and firms—often freely share their innovations with others, creating user-innovation communities and a rich intellectual commons. In *Democratizing Innovation*, Eric von Hippel looks closely at this emerging system of user-centered innovation. He explains why and when users find it profitable to develop new products and services for themselves, and why it often pays users to reveal their innovations freely for the use of all. The trend toward democratized innovation can be seen in software and information products—most notably in the free and open-source software movement—but also in physical products. Von Hippel's many examples of user innovation in action range from surgical equipment to surfboards to software security features. He shows that product and service development is concentrated among "lead users," who are ahead on marketplace trends and whose innovations are often commercially attractive. Von Hippel argues that manufacturers should redesign their innovation processes and that they should systematically seek out innovations developed by users. He points to businesses—the custom semiconductor industry is one example—that have learned to assist user-innovators by providing them with toolkits for developing new products. User innovation has a positive impact on social welfare, and von Hippel proposes that government policies, including R&D subsidies and tax credits, should be realigned to eliminate biases against it. The goal of a democratized user-centered innovation system, says von Hippel, is well worth striving for. An electronic version of this book is available under a Creative Commons license.

This book is an upstream solution to the problems, issues, and questions young people struggle with downstream--alienation, boredom, and mistrust of religion. It includes over a hundred teaching strategies, tactics, logistics, and relationship builders that teachers in homes, schools, and churches can use. This book is a treasure chest of old ideas cast into new and proven teaching practices, each to be mined for the gem in it. Potvin's interest in writing this book, however, is not to focus on what is broken and ineffective in Christian religious education (and a lot of education is broken and ineffective) but on what he has learned to be proven to be effective. He has drawn from his PhD studies, parenting with its perturbations and insights, and over forty years of teaching in universities, public, and faith-based schools. Jesus gave us our program of studies, with much to think about and practice what could work--to bring us to our true self, friendship with the Creator, love for others, and justice for all. And given the unprecedented trend towards home education and online teaching, designed for and led by parents, new practices based on old ideas may be just what the doctor ordered.

Church growth models have often been long on promises and short on disciple-making. We continue to watch consistent church attendance shrink, and our desire to reach the lost is infected with a need for self-validation by growing our numbers at any cost. If we believe that God wants his church to grow, where do we go from here? What is the future of the church? Drawing from his 20 years and 15,000 hours of consulting, author Will Mancini shares with pastors and ministry leaders the single most important insight he has learned about church growth. With plenty of salient stories and based solidly on the disciple-making methods found in Scripture, *Future Church* exposes the church's greatest challenge today, and offers 7 transforming laws of real church growth so that we can faithfully and joyfully fulfill Jesus's Great Commission.

This book lays bare the problems & issues facing humanity @ this pivotal juncture, & presents a feasible

way out. Put simply, this manuscript presents a lifeline for humanity as it faces the dual threats of nuclear destruction & catastrophic climate change.

Combining practical insights from the real business world together with the academic theory and research that underlie methods and techniques, this innovative book prepares readers for the rigors of leading people in just about any situation, not just organizations -- i.e., it trains leaders to think before they act. From assessment through implementation, it focuses on four competencies -- specific behavior characteristics that delineate the "ingredients" of leadership: Directional Thinking, Consequential Thinking, Influence Strategies, and Communication Skills. Begins with a four-chapter Assessment in which readers provide information about how they would use the four Competencies to address specific situations, challenges, and dilemmas. Outlines a Relationship Life Cycle -- a flow chart, linked to a case study at each step, that depicts how relationships begin and evolve and how they either deal effectively with conflict and survive or ignore conflict and as a result allow it to escalate and destroy the relationship. Interpersonal communication skills are then explained and illustrated as a way to help leaders both prevent and resolve interpersonal conflict in both business and personal settings. Includes a Speaker Effectiveness Index -- that serves as both an assessment and development tool for better understanding and improving presentation skills. Includes T-Charts that explain and illustrate how to make a balanced decision. Contains a Q&A chapter that addresses frequently asked questions about leadership and -- in particular -- how to develop and implement a mentoring program in an organization using the 4 Competencies. For leaders, and aspiring leaders, in any type of organization or situation..
