The author demonstrates several basic felting techniques including: basic wet felting, needle felting, nuno, and punch needle felting. For the more advanced fiber artist and sewer, she provides patterns and instructions for original clothing designs including vests, jackets, and skirts. Felt Fashion is a standout from other felting books for its scope, originality, and its distinct ties to couture.

This book discusses data and information visualization techniques-the decision-making tools with applications in health care, finance, manufacturing engineering, process improvement, product design, and others. These tools are an excellent means of viewing the current state of the process and improving them. The initial chapters discuss data analysis, the current trends in visualization, the concepts of systems and processes from which data are collected. The second part is devoted to quality tools-a set of graphical and information visualization tools in data analysis, decision-making, and Lean Six-Sigma quality. The eight basic tools of quality discussed are the Process Maps, Check Sheets, Histograms, Scatter Diagrams, Run Charts, Control Charts, Cause-and-Effect Diagrams, and Pareto Charts. The new quality tools presented are the Affinity, Tree, and Matrix Diagrams, Interrelationship Digraph, Prioritizing Matrices, Process Decision Program Chart, and Activity Network Diagram along with Quality Function Deployment (QFD) and Multivari Charts.

Excerpt from Pattern Making: A Practical Treatise for the Pattern Maker on Wood-Working and Wood Turning, Tools and Equipment, Construction of Simple and Complicated Patterns, Modern Molding Machines and Molding Practice Pattern Making is an art requiring the skill of a carpenter or wood turner combined with a rare mechanical knowledge and an ability to visualize the machines for which the patterns are to be made. This art has expanded wonderfully in the past few years just as other branches of our mechanical industries have developed, for the work of the pattern maker is the first step in most of the mechanical operations which result in a completed machine. Modern machinery is so complicated and has grown to such a size that the complexity of the patterns has increased in proportion. This has necessitated a greater skill on the part of the pattern maker in the design of the

patterns and in the making of the cores, as well as a wider acquaintance with the various foundry methods which have their effect upon pattern construction. Furthermore, with the increase in the duplication of castings in modern manufacturing has come a wider use of metal master patterns, which have given rise to new responsibilities for the pattern maker, and have made him perform a machinist as well as a carpenter. This article aims to cover fully the subject of pattern making, giving the tools and equipment necessary, the design details of simple and complicated patterns for typical cases, the use of green and dry sand cores, and finally the construction and design of a typical molding machine with details as to the manner in which the castings are designed to suit this machine. Both the original and the revising authors have had exceptional experience not only in practical work but in the teaching of the subject and it is the hope of the publishers that the book will be found of distinct practical value in its field.
