This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "O" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and O (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

Colors of the Soul is an information book to help explain the behavior of souls through color. My goal with this book is to help people understand themselves in hopes that I can make their lives easier. Colors of the Soul attempts to explain the nebulous behavior of souls by attributing the major attributes of souls to tangible colors. These colors come together to form a picture that will display the color of your soul. The book, if nothing else, can also serve as an aid to writing believable and consistent characters.

Known for its evolution theme and strong coverage of the relevance of ecology to everyday life and the human impact on ecosystems, the thoroughly revised Eighth Edition features expanded quantitative exercises, a restructured chapter on life history, a thoroughly revised species interactions unit including a chapter introducing the subject, and a new chapter on species interactions. To emphasize the dynamic and experimental nature of ecology, each chapter draws upon current research in the various fields of ecology while providing accessible examples that help you understand species natural history, specific

ecosystems, the process of science, and ecological patterns at both an evolutionary and demographic scale. To engage you in using and interpreting data, a wide variety of Quantifying Ecology boxes walk through step-by-step examples of equations and statistical techniques.

This major new textbook on business history brings together the expertise of two internationally renowned authors to provide a thorough overview of the developments in business – from just before the industrial revolution right up to the present day. Business History is global in scope and looks at the major players – Europe, the US and Japan – as well as emerging economies, such as China and India. Focusing mainly on 'big business', Amatori and Colli critically analyze 'the firm' and its interaction with the evolution of economic, technological and political systems at the micro and macro levels. This up-to-date textbook is an exceptional resource for students on economic and business history courses, as well as for practitioners interested in broadening their understanding of business.

Infant Research and Adult Treatment is the first synoptic rendering of Beatrice Beebe's and Frank Lachmann's impressive body of work. Therapists unfamiliar with current research findings will find here a comprehensive and up-to-date overview of infant competencies. These competencies give rise to presymbolic representations that are best understood from the standpoint of a systems view of interaction. It is through this conceptual window that the underpinnings of the psychoanalytic situation, especially the ways in which both patient and therapist find and use strategies for preserving and transforming self-organization in a dialogic context, emerge with new clarity. They not only show how their understanding of treatment has evolved, but illustrate this process through detailed descriptions of clinical work with long-term patients. Throughout, they demonstrate how participation in the dyadic interaction reorganizes intrapsychic and relational processes in analyst and patient alike, and in ways both consonant with, and different from, what is observed in adult-infant interactions. Of special note is their creative formulation of the principles of ongoing regulation; disruption and repair; and heightened affective moments. These principles, which describe crucial facets of the basic patterning of self-organization and its transformation in early life, provide clinical leverage for initiating and sustaining a therapeutic process with difficult to reach patients. This book provides a bridge from the phenomenology of self psychological, relational, and intersubjective approaches to a systems theoretical understanding that is consistent with recent developments in psychoanalytic therapy and amenable to further clinical investigation. Both as reference work and teaching tool, as research-grounded theorizing and clinically relevant synthesis, Infant Research and Adult Treatment is destined to be a permanent addition to every thoughtful clinician's bookshelf.

Covers the physics and engineering of sport and the athletic body. The general characteristics of bone, joints and muscles are related to their function in specific sports. Guidelines for flexibility and strength training are included, and the biomechanical aspects of exercise are elucidated

from both theoretical and practical perspectives. ATHLETIC ABILITY AND THE ANATOMY OF MOTION is a bridge between biomechanics and the practice of sport.

For fruitful discussion within the Church, for a meaningful dialogue with other Christians, for the renewal of the theology of preaching--for these and many other reasons, we need a new understanding of the nature of revelation. The usual apologetical treatment of revelation, bent on proving its existence, touches but the fringe of the reality. Our day and age needs a theology of revelation which probes the nature, depths and dimensions of the mystery. Father Latourelle's study is a significant contribution in this unfurrowed field, and may well be recognized as a landmark for years to come. His treatment of scriptural data on the notion of revelation is grounded on the advances of twentieth century exegesis. He admirably handles the multifaceted Old Testament notion of revelation; and his detailed study of the Synoptics, Acts, Paul, and John heightens the point that the Old Testament's revelation foreshadowed the New, and the New is only intelligible against the background of the Old. His summary of the patristic idea of revelation is erudite and stimulating, and probes the thoughts of twenty writers from the Apostolic Fathers to Augustine. The richness of patristic insight contrasts sharply with later theological studies of the nature of revelation. His study of the theological thought of the scholastic and neo-scholastic schools is critical and informative. Their approach culminated in overstressing the apologetical aspects of revelation--a course which modern theology is abandoning to re-discover a theology of revelation that is Christ-centered, Scriptural, historical and interpersonal. In treating of the magisterium, the author presents a splendid analysis of official documents from Trent to Vatican II, and his summary underscores the point that the Church documents present a view of revelation that closely resembles that of the biblical and patristic sources. The author's personal reflections enable us to view many aspects of revelation in a new light. He draws on the insights of modern linguistics to give a new dimension to revelation's traditional definition, locutio Dei. He elucidates the point that revelation is neither event alone nor word alone--its structure is sacramental and consists of events interpreted by word . . . In dealing with preaching, miracles and other themes, Father Latourelle combines wide erudition and lucidity, and his work stands as a major contribution to modern theological thought.

The beginnings of jazz and the story of Charles "Buddy" Bolden (1877–1931) are inextricably intertwined. Just after the turn of the century, New Orleanians could often hear Bolden's powerful horn from the city's parks and through dance hall windows. Despite his lack of formal training, his unique style—both musical and personal—made him the first "king" of New Orleans jazz and the inspiration for such later jazz greats as King Oliver, Kid Ory, and Louis Armstrong. For years the legend of Buddy Bolden was overshadowed by myths about his music, his reckless lifestyle, and his mental instability. In *Search of Buddy Bolden* overlays the myths with the substance of reality. Interviews with those who knew Bolden and an extensive array of primary sources enliven and inform Donald M. Marquis's absorbing portrait of the brief but brilliant career of the first man of jazz. This paperback edition includes a new preface and appendix relating events and discoveries that have occurred since the book's original publication in 1978.

"Bulgakov's strong point was his ability to amplify the roots of man's dementia, the howls of political pandemonium . . . a lively collection." –The Washington Post Book World Mikhail Bulgakov's Diaboliad and Other Stories, comprised of Diaboliad, No. 13–The Elpit Workers' Commune, A Chinese Tale, and The Adventures of Chichikov, serves as an excellent introduction to this renowned Russian satirist and playwright's work. Black comedy, biting social and political commentary, and Bulgakov's unique narrative exuberance combine to tell the tales of labyrinthine post-Revolution bureaucracy; clashes between science, the intellectual class, and the state; and the high price to be paid for the promised utopian world of Communism in early Soviet Russia. Bulgakov's signature eloquent skewering of the various shortcomings of the world around and within him can be found on every page, and horror and magic interweave in a constant dance of the absurd—a dance that would reach its highest point both stylistically and

thematically in Bulgakov's tour de force novel The Master and Margarita. "One of the most original voices of the twentieth century." –The Guardian, UK

Follow two abolitionists who fought one of the most shockingly persistent evils of the world: human trafficking and sexual exploitation of slaves. Told in alternating chapters from perspectives spanning more than a century apart, read the riveting 19th century first-hand account of Harriet Jacobs and the modern-day eyewitness account of Timothy Ballard. Harriet Jacobs was an African-American, born into slavery in North Carolina in 1813. She thwarted the sexual advances of her master for years until she escaped and hid in the attic crawl space of her grandmother's house for seven years before escaping north to freedom. She published an autobiography of her life, Incidents in the Life of a Slave Girl, which was one of the first open discussions about sexual abuse endured by slave women. She was an active abolitionist, associated with Frederick Douglass, and, during the Civil War, used her celebrity to raise money for black refugees. After the war, she worked to improve the conditions of newly-freed slaves. As a former Special Agent for the Department of Homeland Security who has seen the horrors and carnage of war, Timothy Ballard founded a modern-day "underground railroad" which has rescued hundreds of children from being fully enslaved, abused, or trafficked in third-world countries. His story includes the rescue and his eventual adoption of two young siblings--Mia and Marky, who were born in Haiti. Section 2 features the lives of five abolitionists, a mix of heroes from past to present, who call us to action and teach us life lessons based on their own experiences: Harriet Tubman--The "Conductor"; Abraham Lincoln--the "Great Emancipator"; Little Mia--the sister who saved her little brother; Guesno Mardy--the Haitian father who lost his son to slave traders; and Harriet Jacobs--a teacher for us all.

In 2016, the Nobel Prize in Literature was awarded to the singer and songwriter Bob Dylan "for having created new poetic expressions within the great American song tradition." This suggests how important pop music is in the contemporary society, and highlights how blurred are traditional boundaries across all forms of art. Pop music is strictly connected to mass media, mass culture, the youth universe, and its languages. Pop/rock music is the bearer of new trends, while getting influenced by social and cultural events. It is the soundtrack of entire generation, accompanying not only several forms of entertainment but also the social commitment, need to belong, desire for recognition and limelight. Rock reflects the world of youth, its rituals and legends, and it represents an important tool to socialise and get together. Popular culture is the turf where change happens. Pop music is never permanent, it is ever-changing. Starting from the main theories about the sociology of music, the aim of this book is to investigate social changes, youth cultures, media, and pop music. It is a journey from the Beat Revolution (which includes art and culture from the 50s onwards) to the Bit Generation, which is all about digital technologies and software culture.

This early work by Sigmund Freud was originally published in 1895 and we are now republishing it with a brand new introductory biography. 'Obsessions and Phobias' is a psychological essay on the distinction between obsessions and phobias and potential reasons for their occurrence. Sigmund Schlomo Freud was born on 6th May 1856, in the Moravian town of Příbor, now part of the Czech Republic. He studied a variety of subjects, including philosophy, physiology, and zoology, graduating with an MD in 1881. Freud made a huge and lasting contribution to the field of psychology with many of his methods still being used in modern psychoanalysis. He inspired much discussion on the wealth of theories he produced and the reactions to his works began a century of great psychological investigation.

Attachment Theory is one of the most important theoretical developments in psychoanalysis to have emerged in the past half-century. It combines the rigorous scientific empiricism of ethology with the subjective insights of psychoanalysis, and has had an enormous impact in the fields of child development, social work, psychology, and psychiatry. This is the first known book to appear which brings together John Bowlby and post-Bowlbian research and shows how the findings of Attachment Theory can inform the practice of psychotherapy. It also provides fascinating insights into the history of the psychoanalytic movement and looks at the ways in which Attachment Theory can help in the understanding of society and its problems.

Questo Manuale di pedagogia e di didattica - in continuità con il Manuale di pedagogia generale di cui riprende i nuclei tematici e problematici fondamentali - presenta una rinnovata riflessione sulla struttura epistemologica e sugli orientamenti più attuali della ricerca pedagogica e didattica. Ciò alla luce delle teorie della complessità e delle emergenze storico-culturali degli ultimi anni. Le categorie della differenza, del pluralismo metodologico, dello sviluppo formativo-trasformativo, della ibridazione tra i saperi e tra le culture, dell'apertura alla totalità delle scienze umane, dell'integrazione degli alfabeti - così come dei luoghi e dei tempi dell'educazione - propongono al lettore un'idea di pedagogia critica e problematica, mobile e in continuo divenire.

Credit Analysis and Lending Management is a new Australasian text that focuses on the core lending functions of financial institutions, covering asset management, credit risk assessment and analysis, lending policy formulation and management, and the rise of new product development and marketing in the financial services sector. The value of any financial

institution is measured by its ability to effectively manage and reduce its credit risk. This text details the structure of the credit organisation, including loan markets. Relevant financial statements are presented to develop students' interpretative and analytical understanding of financial statements. Features: * Developments in loan marketing and new loan products are profiled and assessed (see chapter 17.) * Problem loan management is discussed as a growing professional issue (see chapter 16). * Detailed case studies at the end of the text present a diverse set of professional scenarios that can be used for assignment, assessment and group work activities. * 'Industry insight' boxes profile current professional issues and identify industry developments. * 'A day in the life of...' boxes highlight the diversity of professional roles in the banking industry.

There is more to education than teaching and learning, and more to anthropology than making studies of other people's lives. Here Tim Ingold argues that both anthropology and education are ways of studying, and of leading life, with others. In this provocative book, he goes beyond an exploration of the interface between the disciplines of anthropology and education to claim their fundamental equivalence. Taking inspiration from the writings of John Dewey, Ingold presents his argument in four close-knit chapters. Education, he contends, is not the transmission of authorised knowledge from one generation to the next but a way of attending to things, opening up paths of growth and discovery. What does this mean for the ways we think about study and the school, teaching and learning, and the freedoms they exemplify? And how does it bear on the practices of participation and observation, on ways of study in the field and in the school, on art and science, research and teaching, and the university? Written in an engaging and accessible style, this book is intended as much for educationalists as for anthropologists. It will appeal to all who are seeking alternatives to mainstream agendas in social and educational policy, including educators and students in philosophy, the social sciences, educational psychology, environmentalism and arts practice.

A Guide for Cultivating Mindfulness in Education

Infant Research and Adult Treatment

Happy Teachers Change the World is the first official, authoritative manual of the Thich Nhat Hanh/Plum Village approach to mindfulness in education. Spanning the whole range of schools and grade levels, from preschool through higher education, these techniques are grounded in the everyday world of schools, colleges, and universities. Beginning firmly with teachers and all those working with students, including administrators, counselors, and other personnel, the Plum Village approach stresses that educators must first establish their own mindfulness practice since everything they do in the classroom will be based on that foundation. The book includes easy-to-follow, step-by-step techniques perfected by educators to teach themselves and to apply to their work with students and colleagues, along with inspirational stories of the ways in which teachers have made mindfulness practice alive and relevant for themselves and their students across the school and out into the community. The instructions in Happy Teachers Change the World are offered as basic practices taught by Thich Nhat Hanh, followed by guidance from educators using these practices in their classrooms, with ample in-class interpretations, activities, tips, and instructions. Woven throughout are stories from members of the Plum Village community around the world who are applying these teachings in their own lives and educational contexts.
