Pediatric Primary Care - E-Book*

The Pediatric Dosage Handbook has been the trusted resource for medical professionals managing pediatric patients for over 12 years. This reference is organized into convenient sections for easy retrieval of critical information. Section one is introductory text, including helpful guidelines on the use of the handbook.

Section two encompasses 778 drug monographs, listed alphabetically with extensive cross-referencing. Section three is the Appendix, with hundreds of charts and reviews of special topics, such as guidelines for treatment and therapy recommendations. The valuable Therapeutic Category & Key Word Index and the International Brand Name Index are found in section four.

The pediatric population is a dynamic group, with major changes in pharmacokinetics and pharmacodynamics

taking place throughout infancy and childhood. Because of these changes, the need for the evaluation and establishment of medication dosing regimens in children of different ages is great. This book includes 17 drug monographs.

Focused on pediatric physiology, pharmacology, pharmacokinetics and pharmacodynamics, this book illustrates the differences between the pediatric population and adults; knowledge of extreme importance not only during pediatric drug development but also in the clinical practice. Physicians, nurses, clinical pharmacologists, researchers and healthcare professionals will find this an invaluable resource. With the advent of pediatric exclusivity, and requirements to conduct clinical studies in children, an emphasis has been placed on finding a safe and efficacious dose of a drug in children. Children are not 'small adults', and drug dosing in this population requires special consideration. There are

Bookmark File PDF Pediatric Dosage Handbook

subtle physiological and biochemical differences among neonates, infants, children, adolescents and adults and dosing in pediatrics requires proper understanding of these factors. Furthermore, dosing in children, as in adults, should be based on pharmacokinetic and pharmacodynamic data. This is an evolving area, as pediatric pharmacokinetic studies are becoming mandatory for getting approval of new drugs in this population.
